Executive Summary

This report summarizes the construction of the Upper Floridan aquifer monitor well at the Taylor Creek aquifer storage and recovery (ASR) well site, in Okeechobee, Florida.

The ASR system, along with a dual-zone monitor well, was constructed in 1988 and tested by the South Florida Water Management District (SFWMD or District) during the early 1990s. The dual-zone monitor well is approximately 600 feet northeast of the ASR well.

To support the reactivation of an ASR system at this site, a single-zone monitor well (OKF-106) was constructed within 150 feet of the ASR well, as required by ASR system permit requirements to monitor water quality and water levels in the Upper Floridan aquifer. During times of surplus water, the ASR system is intended to convey stormwater from Taylor Creek (L-63N Canal) as recharge water to the ASR well for storage in the Floridan aquifer. The water recovered from recharge of the ASR well will be discharged back into Taylor Creek. The monitor well will collect water quality and water level data in the Upper Floridan aquifer, located up section of the Taylor Creek ASR well's storage zone.

Based on hydrogeologic testing at the borehole, and lithologic and geophysical logging, the top of the targeted monitor interval was identified at 718 feet below land surface. The well was constructed of 10.75-inch (outer diameter) polyvinyl chloride to 718 below land surface, with an open-hole monitor zone interval from 718 to 800 feet bls. Hydraulic testing indicated modest productivity in this interval. Transmissivity was estimated at 5,845 square feet per day from a calculated specific capacity of 6.27 gallons per minute per foot.

Water collected from the open hole of the well contains a chloride and total dissolved solids concentration of 670 milligrams per liter (mg/L) and 1,500 mg/L, respectively. As of November 15, 2008, the piezometric surface at the completed wellhead exhibited a pressure of 1.5 pounds per square inch, which equals a water level of 8.465 feet above land surface. The wellhead was constructed using 316 stainless steel. Telemetry equipment was installed on the wellhead, providing continuous recording of water-level data. All water-level and water quality data are stored in the District's environmental database, DBHydro.

1

Introduction

This report summarizes the drilling, construction, and testing of the single-zone monitor well, OKF-106, at Taylor Creek's L63N Canal aquifer storage and recovery (ASR) site in Okeechobee County (**Figure 1**). To support the reactivation of the ASR system at this site, OKF-106 was completed in the Upper Floridan aquifer between 718 and 800 feet below land surface (bls) to monitor water quality and water levels per ASR construction permit requirements. The well is located in the northeast quadrant of Section 24, Township 37 South, Range 35 East, and the geographic coordinates are 27° 14' 16" N latitude and 080° 47' 08" W longitude North American Datum of 1983 (NAD 1983). The land surface elevation of 32.82 feet National Geodetic Vertical Datum of 1929 (NGVD, 1929) was determined from a survey.

The ASR system is intended to convey stormwater during times of surplus water from Taylor Creek and recharge it into the ASR well for storage in the Floridan aquifer. The water recovered from recharge of the ASR well will be discharged back into Taylor Creek (**Figure 2**). The monitor well will collect water quality and water level data in the Upper Floridan aquifer, located up section of the Taylor Creek ASR well's storage zone. **Figure 3** shows the geologic setting of the Taylor Creek site.

Construction of OKF-106 was authorized by the Florida Department of Environmental Protection (FDEP) through a Class V Group and Underground Injection Control ASR System construction permit (number 0198641-009-UC) (**Appendix A**). Per this permit, weekly informational summary reports were submitted to the FDEP during construction and testing. **Appendix B** presents these weekly summary reports.

Figure 1. General location map.

Figure 2. Taylor Creek ASR site.

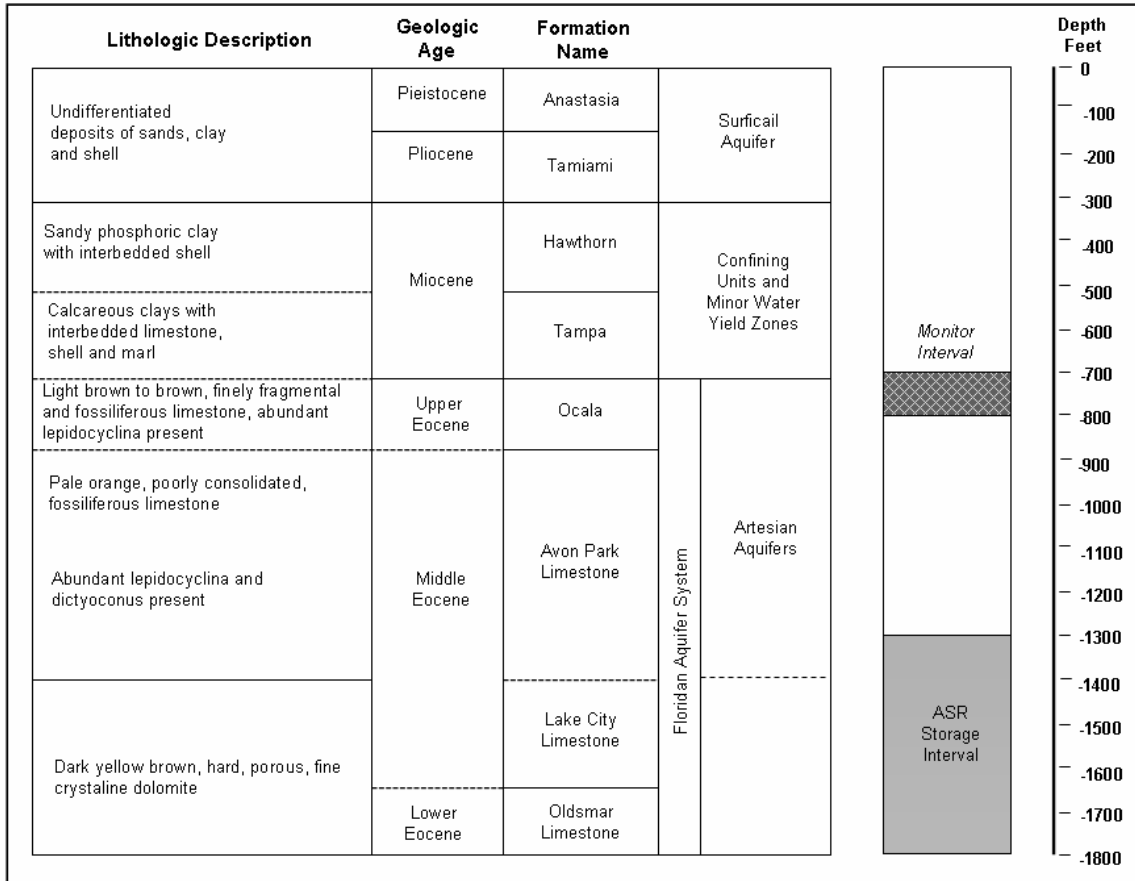

Figure 3. Geologic setting of the Taylor Creek ASR site.

The Tampa-based contractor, Applied Drilling Engineering (ADE), was responsible for drilling, well construction, and testing services at the project site, while Boyle Engineering Company (Boyle) of Palm City, Florida provided consultation services.

2

Well Construction

The OKF-106 monitor well was completed in the Upper Eocene-aged Ocala Formation, part of the Upper Floridan aquifer. During construction, the SFWMD prepared and sent weekly summary reports to the FDEP and Technical Advisory Committee (TAC) (**Appendix B**). Daily drilling reports were prepared by the contractor and submitted with the weekly summary reports.

2.1 WELL CONSTRUCTION DETAILS

Applied Drilling Engineering (ADE) began construction on June 30, 2008. Limited site preparation was needed, as the drill site was an existing construction site. Support timbers were substituted for a drilling pad. Mud rotary and reverse-air techniques were used during drilling operations. Formation samples (well cuttings) were collected at 10-foot intervals and lithologic descriptions were conducted on the cuttings (**Appendix C**). A schematic of the completed well is shown in **Figure 4**.

2.1.1 Pit Casing Installation

On July 1, 2008, closed-circulation mud rotary drilling was used to advance a nominal 8-inch diameter pilot hole from land surface to 82 feet bls. ADE reamed (over-drilled) the 8-inch diameter pilot hole using a nominal 23-inch diameter reamer bit to a depth of 84 feet bls. Then ADE installed the 18-inch steel pit casing from land surface to 82 feet bls and pressure grouted it back to land surface using 108 cubic feet (ft³) of ASTM Type II neat cement. The casing summary is presented in **Appendix D**. **Appendix E** provides the manufacturer's mill certificates for the 18-inch diameter steel pit casing.

Figure 4. Completed well schematic.

2.1.2 Final Casing Installation

On July 7, 2008, ADE employed the mud rotary method to drill a nominal 17-inch pilot hole from 82 to 720 feet bls. Geophysical logs (gamma, caliper, and dual induction) were conducted on the pilot hole on July 25, 2008 after reaching 720 feet bls. The FDEP approved seating the casing at 717 feet bls based on the formation samples (well cuttings) and geophysical logs. On July 28, 2008, ADE installed the 10-inch Certa-lok™ polyvinyl chloride (PVC) casing to 717 feet bls and pressure grouted the annular space. ADE then cemented the remaining annular space around the 10-inch PVC casing to land surface in three stages by the tremie method using ASTM Type II cement mixed with 4 percent bentonite. **Table 1** shows a summary of the cementing stages. **Appendix D** provides a casing summary. The CertainTeed casing specifications are shown in **Appendix F**.

Table 1. Cement summary.

Stage No.	Pumped Volume (cubic feet)	Slurry Type	Hard Tagged (ft bls)
1	216	4% bentonite-cement	463
2	209	4% bentonite-cement	128
3	108	4% bentonite-cement	0

2.1.3 Open-Hole Construction

On August 7, 2008, ADE switched to the reverse-air method to advance the nominal 8-inch diameter borehole from 717 to 730 feet bls. Based on the competency of formation samples at the interval of 730 to 740 feet bls, ADE obtained one 4-inch, full diameter core with 80 percent recovery. A representative core section was prepared for analysis by Core Laboratories, Inc. in Midland, Texas. Section 3.3: Petrographic Analysis provides the analysis and the core description is presented in **Appendix G**. **Appendix H** provides the corresponding report from Core Laboratories, Inc., which is also described in Section 3.3. After retrieving the core, ADE advanced the 8-inch diameter borehole to a total depth 802 feet bls. Samples of formation water were collected from the discharge stream at 10-foot intervals during the reverse-air drilling and field-tested for pH, temperature, conductivity, and total dissolved solids concentration (**Table 2**).

Table 2. Water quality data.

Depth (ft bls)	Temperature (°C)	pH (SU)	Specific Conductance (µS/cm)	Total Dissolved Solids (mg/L)
730	28.6	7.63	2,590	1,290
740	30.1	7.69	2,680	1,340
760	28.7	8.15	2,700	1,350
770	27.1	7.62	2,710	1,360
780	27.1	8.07	2,720	1,360
800	27.0	8.16	2,700	1,360

Legend:

°C - degrees Celsius

SU - standard units

µS/cm - microSiemens per centimeter

mg/L - milligrams per liter

2.2 WELLHEAD AND PAD COMPLETION

On August 20, 2008, ADE constructed the wellhead and well pad (Figure 5) as specified in the statement of work for this contract. All PVC parts are schedule 80 and the steel parts are 316 stainless steel. A 10 x 10 x 6-inch diameter PVC tee was connected to the 10-inch PVC production casing by a flange held in place with stainless steel bolts. From the upper end of the PVC tee, a 10-inch diameter blind flange plate, with a 3-inch diameter threaded connection was installed; complete with neoprene gaskets and stainless steel bolts. A 3-inch stainless steel ball valve was installed onto a 3-inch diameter steel pipe extending above the blind flange. A 1/2-inch diameter smooth nose sample port was built onto the 3-inch diameter steel pipe, along with a 4-inch steel, 50 pounds per square inch, fluid-filled pressure gauge, via a 3-inch diameter steel tee. Along the horizontal part of the 10-inch PVC tee, a 6-inch butterfly valve was installed on the 6-inch PVC pipe with an impeller McCrometer flowmeter. The PVC pipe was coupled with two 6-inch diameter 45-degree bends and buried to discharge at the detention pond to the south.

Figure 5. Wellhead and well pad schematic.

ADE poured the 10-foot by 10-foot by 8-inch reinforced finished well pad and installed an aluminum survey marker on the southwest corner of the pedestal with 4-inch steel posts and rails around the well pad. **Figure 6** shows the finished wellhead and well pad.

Figure 6. Wellhead and well pad.

2.3 AQUIFER PUMP TEST

On August 26, 2008, ADE ran a step drawdown test in OKF-106. The test consisted of three steps, run for 60 minutes, and its purpose was to determine the maximum sustainable discharge rate for a single-well aquifer performance test (APT). ADE began pumping the well at 173 gallons per minute (gpm) for the first step. This step resulted in a drawdown of 24 feet in OKF-106. The second step was conducted at a pumping rate of 307 gpm with a drawdown of 44 feet. The final step occurred at 400 gpm with a 60.5 foot drawdown in the well. This step test provided data to calculate the specific capacity and determine the optimal pumping rate for the 8-hour APT, which was approximately 400 gpm. On August 27, 2008, the 8-hour APT began at a discharge rate of 414 gpm. Section 3.4: Aquifer Pumping Tests presents the corresponding drawdown and recovery illustrations and analyses.

2.4 FINAL GEOPHYSICAL LOGGING AND VIDEO SURVEY

On September 2, 2008, Advanced Borehole Services (ABS) of Dade City, Florida conducted a down-hole video survey and discovered an obstruction in the borehole at 723 feet bls, preventing the survey from being completed. ADE mobilized a drill rig to the site and drilled out the obstruction. ABS completed the video survey and conducted geophysical logs (gamma, caliper, dual induction, and resistivity) on September 8, 2008. **Appendix I** provides the geophysical log results (see CD) and video survey (see DVD).

Hydrogeology

3.1 GEOLOGY

The description of the geology at the project site is based on the analyses of drill cuttings, geophysical logs (**Appendix I**), and hydrologic tests conducted during the construction of OKF-106. The lithologic log of the cuttings is provided in **Appendix C**. The borehole was terminated in the Ocala Formation at 802 feet bls. **Figure 7** summarizes the general stratigraphic description of the monitor well construction. **Appendix J** provides more information about the lithology and its geophysical correlation.

The geologic formations penetrated during construction range in age from Pleistocene to Upper Eocene. They consist of undifferentiated Quaternary deposits, the Hawthorn Group (the Hawthorn Formation and the Tampa Formation), and the Ocala Formation.

Lithologic Description	Geologic Age	Formation	Hydrogeologic Units	Depth (ft)
Undifferentiated deposits of sands, clay, and shell	Pleistocene	Anastasia	Surficial Aquifer	100
	Pliocene	Tamiami		200
Sandy phosphatic clay with interbedded shell	Miocene	Hawthorn	Confining Units and Minor Water Producing Zones	300
-----		Tampa		400
Calcareous clays with interbedded limestone, shell, and marl				500
Light brown to brown, fossiliferous limestone, abundance of <i>lepidocyclina</i>	Upper Eocene	Ocala	Upper Floridan Aquifer (artesian)	600
				700
				800

Figure 7. General stratigraphy of the monitor well construction.

Undifferentiated sediments of Pliocene to Pleistocene age are found from land surface to 240 feet bls at the site. These surficial deposits mainly consist of unconsolidated quartz sand (fine- to medium-grained), shell fragments, silts, and clays with trace amounts of phosphatic sediments. The cuttings then increase in clay content from less than 30 percent beginning at 180 feet bls through 240 feet bls, where clays account for about 75 percent of sample lithology.

The Hawthorn Formation (Hawthorn Group) of Miocene age is found on-site from 250 feet bls and consists primarily of clays. A thick bed of moderately-cohesive clay extends to 340 feet bls. Beds of quartz sand, shell fragments, and carbonate sands are found at the 340 to 500 feet bls interval. Grains of phosphate-rich sediment are found in percentages from 5 to 15 percent of sample composition. Underlying the Hawthorn Formation, also of Miocene age, the Tampa Formation, consists of indurated limestone, shell fragments, and trace amounts of phosphate, with clays being the primary constituent. The depth range of the formation is 500 to 700 feet bls. A thick layer of moderately- to well-cohesive clays is found at the 500 to 600 feet bls interval. This layer provides good confinement for the Upper Floridan aquifer, which occurs in the calcareous Ocala Formation underlying the Hawthorn Group.

The Ocala Formation of Upper Eocene age starts at 700 feet bls. It consists of poorly indurated calcarenitic limestone with abundant shells and shell fragments. The abundance of the indicative *Lepidocyclina sp.* fossils increases with depth, as well as increased friability. The monitor interval, extending from 718 to 820 feet bls, occurs within the carbonate rocks of the Ocala Formation.

3.2 AQUIFER DESIGNATIONS

The penetrated strata are grouped into three principal systems: the surficial aquifer system (SAS), the intermediate confining unit, and the Floridan aquifer system (FAS). The aquifers and confining unit identified at the site are illustrated in **Figure 3** and **Figure 7**. The SAS includes the water table aquifer. The intermediate confining unit includes the formations within the Hawthorn Group. The upper section of the FAS, also known as the Upper Floridan aquifer, includes the carbonate strata of the Ocala Formation at this site. The Upper Floridan aquifer is the hydraulic unit identified as the monitor interval for this well.

3.3 PETROGRAPHIC ANALYSIS

One 10-foot core sample was collected from this borehole. The core was obtained within the Ocala Formation, from a depth of 730 to 740 feet bls. The sample was packaged and shipped to Core Laboratories, Inc. in Midland, Texas for petrographic analysis. Based on the core analysis report provided by Core Laboratories, Inc., the Ocala Formation sample is divided into two

classifications: bioclastic grainstone and packstone. **Figure 8** shows the different areas of the core sample. The lithologic description received from the laboratory is for the upper grainstone area only. Porosity is estimated at about 30 to 35 percent with moldic, intraparticle, and interparticle pore-types. Generally, the texture is grainstone. Calcite composes 100 percent of the minerals with trace amount (<0.5%) of quartz. Bioclasts include foraminifera (*Lepidocyclina sp.* **Figure 8** inset), bivalves, gastropods, and bryozoans.

Figure 8. Core sample from Core Laboratories. The core description is from the upper grainstone area. Note the inset photo of orbitoid foraminifera (*Lepidocyclina sp.*).

3.4 AQUIFER PUMPING TESTS

On August 26, 2008, ADE ran a step drawdown test in OKF-106. The test consisted of three steps and its purpose was to determine the maximum sustainable discharge rate for a single-well APT. ADE began pumping the well at 173 gpm for the first step, which resulted in a drawdown of 24 feet. The pumping rate for the second step was 307 gpm with a drawdown of 44 feet. The final step was pumped at 400 gpm with a 60.5-foot drawdown. **Figure 9** plots the results to the step drawdown test. The specific capacity was calculated for each step, and the corresponding range of calculated specific capacity is 6.6 to 7.2 gallons per minute per foot (gpm/ft) (shown in **Figure 10**).

Based on the specific capacity test, a pumping rate of approximately 400 gpm was determined for the 8-hour constant-rate APT.

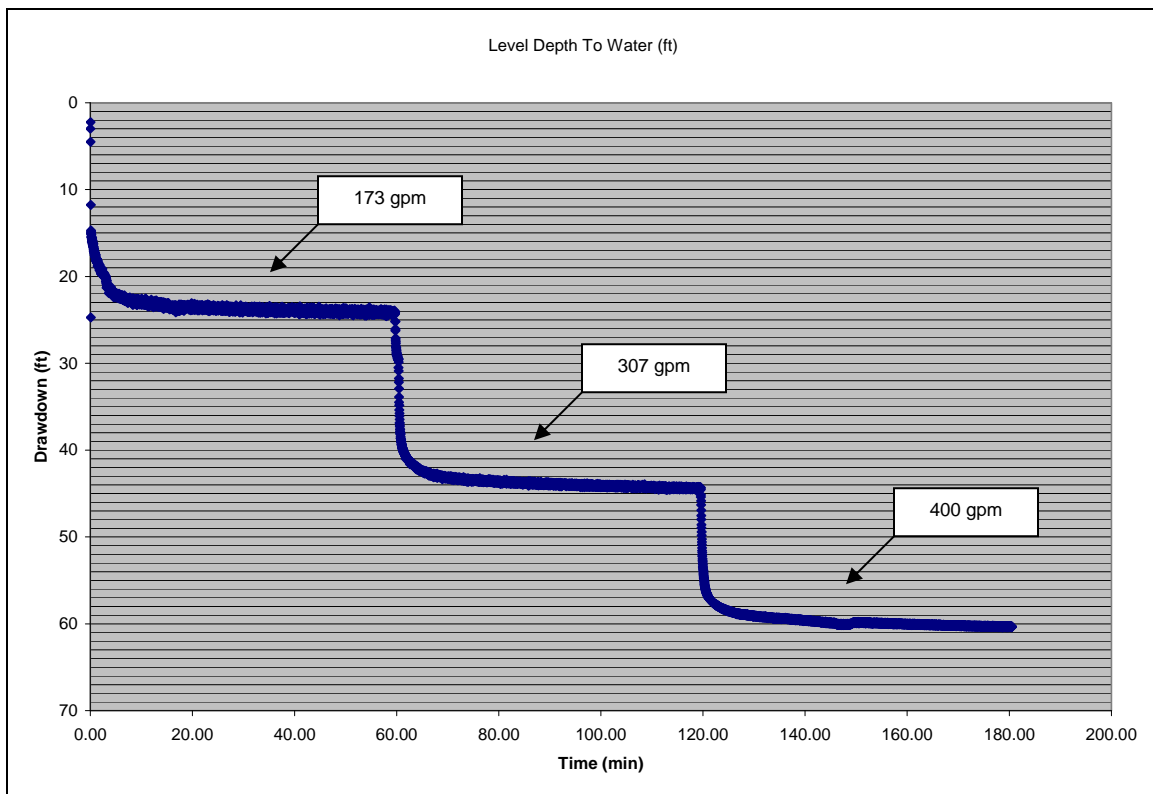

Figure 9. Step drawdown test.

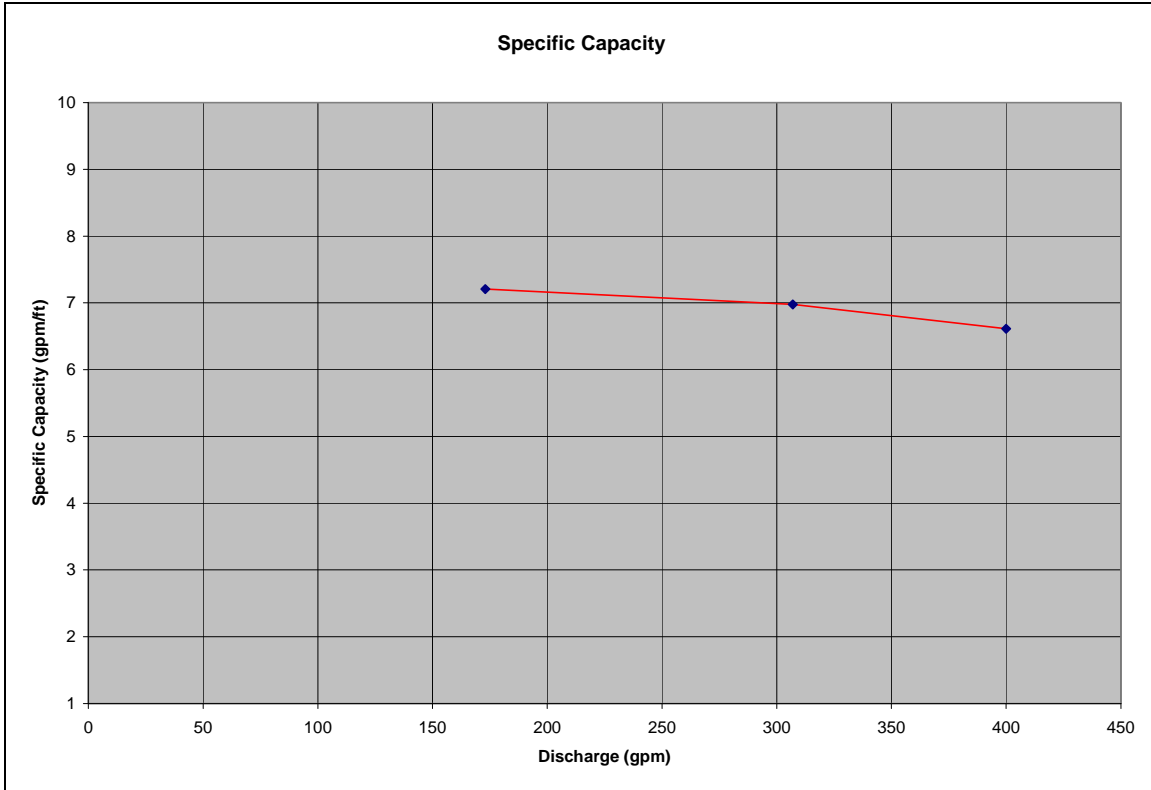

Figure 10. Specific capacity.

On August 27, 2008, the 8-hour APT was conducted with a pumping rate of 414 gpm. **Figures 11** and **12** present drawdown and recovery plots of the 8-hour APT. Transmissivity of the Upper Floridan aquifer is calculated to be 43,718 gallons per day per foot (gpd/ft) (5,845 ft²/day), using the straight-line method, which is similar to the calculation using the Cooper-Jacob nonequilibrium equation:

$$T = \frac{264 Q}{\Delta s}$$

Where:

- T = coefficient of transmissivity, in gpd/ft.
- Q = pumping rate, in gallons per day (gpd).
- Δs = slope of the “time versus drawdown” plot between one log cycle, in ft.

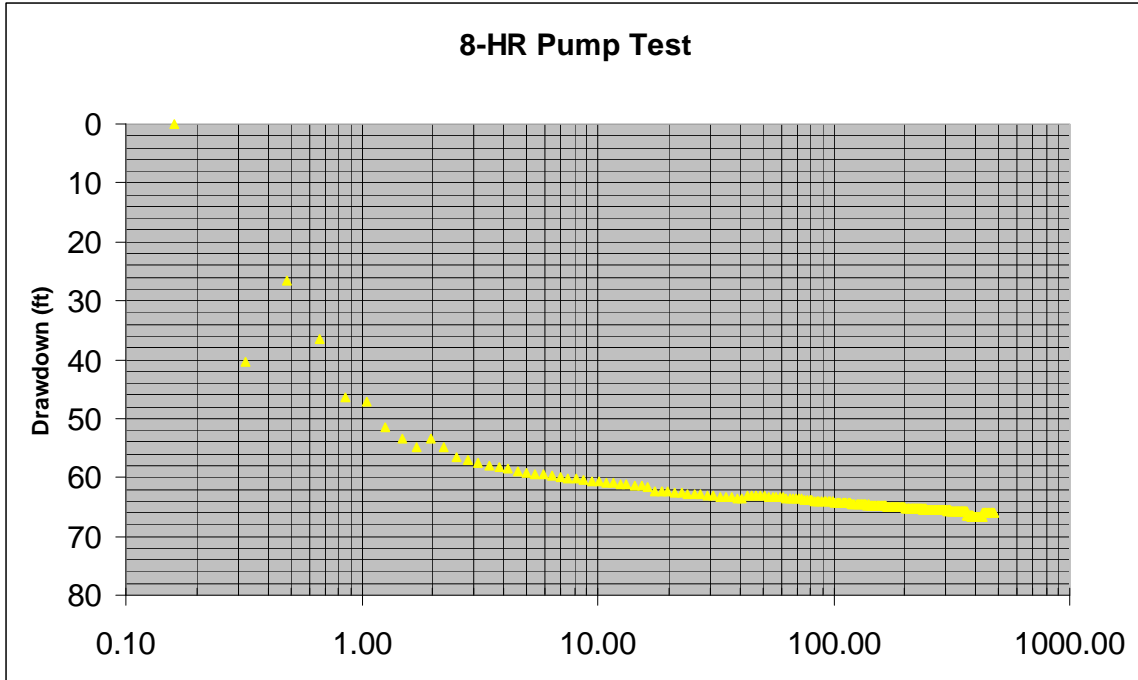

Figure 11. Drawdown versus Time.

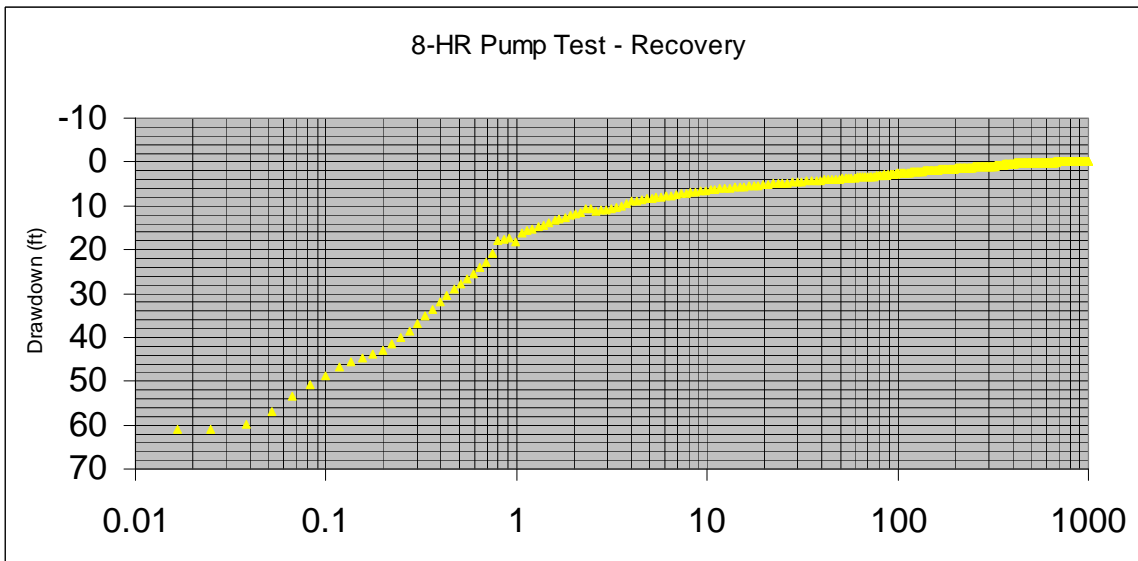

Figure 12. Drawdown versus Time - Recovery.

Appendix K provides electronic files of the aquifer pump tests.

4

Water Quality

Upon completion of the pumping portion of the constant-rate pump test, a water sample was collected and analyzed for primary and secondary drinking water parameters, as required by the well construction permit. **Appendix L** contains the laboratory data sheets and quality validation reports. **Table 3** presents a summary of the laboratory results.

Table 3. Summary of water analysis from Well OKF-106 at the L63N Canal ASR site (sample data: August 27, 2008).

Constituent	Concentration	Units
Total Dissolved Solids	1,500	mg/L

NOTICE OF PERMIT

June 9, 2008

Mr. Chip Merriam
Deputy Executive Director
South Florida Water Management District
3301 Gun Club Road
West Palm Beach, FL 33406

OKEECHOBEE COUNTY
UIC - L-63N Canal ASR Facility
FILE: 0198641-009-UC

Dear Mr. Merriam:

Enclosed is Permit Number 0198641-009-UC, to construct a single zone monitoring well (UFA-MW1) at the L-63N Canal ASR Facility, located a few miles southeast of the City of Okeechobee, near the intersection of State Road 710 and the L-63N Canal in Okeechobee County, Florida. This permit is issued pursuant to Section(s) 403.087, Florida Statutes and Florida Administrative Codes 62-4, 62-520, 62-522, 62-528 and 62-550.

Any party to this Order (permit) has the right to seek judicial review of the permit pursuant to Section 120.68, Florida Statutes, by the filing of a Notice of Appeal pursuant to Rule 9.110, Florida Rules of Appellate Procedure, with the Clerk of the Department in the Office of General Counsel, Mail Stop 35, 3900 Commonwealth Blvd., Tallahassee, Florida 32399-3000; and by filing a copy of the Notice of Appeal accompanied by the applicable filing fees with the appropriate District Court of Appeal. The Notice of Appeal must be filed within 30 days from the date this Notice is filed with the Clerk of the Department.

Should you have any questions, please contact Mark A. Silverman, P.G., or Joseph R. May, P.G., of this office at (561) 681-6778 or (561) 681-6691, respectively.

PERMITTEE:
Mr. Chip Merriam
Deputy Executive Director
South Florida Water Management District
3301 Gun Club Road
West Palm Beach, FL 33406

PERMIT/CERTIFICATION NUMBER: 0198641-009-UC
DATE OF ISSUANCE: June 9, 2008
EXPIRATION DATE: June 8, 2013
COUNTY: Okeechobee
POSITION: 26° 14' 20" N / 80° 14' 09" W
PROJECT: Construction and Testing Permit for a
Single Zone Monitor Well at the L-63N
Canal ASR Facility

PROJECT: Construction permit for a single zone monitoring well, UFA-MW1.

This permit is issued under the provisions of Chapter 403.087, Florida Statutes, and Florida Administrative Code (F.A.C.) Rules 62-4, 62-520, 62-522, 62-528 and 62-550. The above named permittee is hereby authorized to perform the work or operate the facility shown on the application and approved drawing(s), plans, and other documents attached hereto or on file with the Department and made a part hereof and specifically described as follows:

TO CONSTRUCT AND TEST: One single zone monitoring well (UFA-MW1) at the L-63N Canal ASR Facility. This well shall be constructed to accommodate anticipated Class V, Group 7 aquifer storage and recovery (ASR) well monitoring at the L-63N Canal ASR Facility. The facility, which had been permitted, constructed and operated (cycle tested) by the SFWMD during the early 1990's, includes a 24-inch diameter ASR well and a dual-zone monitoring well. The ASR well was completed with an open hole extending from 1,268 to 1,700 feet below land surface (bls). The dual zone monitoring well was completed with an upper zone extending from 990 to 1,075 feet bls, and a lower zone extending from 1,275 to 1,700 feet bls.

Monitoring well UFA-MW1 is being constructed because current UIC permitting criteria requires a monitoring well within 150 feet of the ASR well, to monitor for upward fluid movement, for a Water Quality Criteria Exemption (WQCE). The new monitoring well will be constructed of 10-inch diameter final PVC casing. It is anticipated that this casing will be cemented to a depth of approximately 700 feet bls, and that an open hole will extend to approximately 750 feet bls, to monitor the uppermost portion of the Floridan aquifer overlying the ASR storage zone. The actual setting depth of the final casing and the monitor interval will be determined based on field conditions only after approval from the Department.

IN ACCORDANCE WITH: Application to construct and test a single zone monitoring well received March 21, 2008 deemed complete as of June 4, 2008.

LOCATED AT: The L-63N Canal ASR Facility, which is a few miles southeast of the City of Okeechobee, near the intersection of State Road 710 and the L-63N Canal in Okeechobee County, Florida..

TO SERVE: The Governor's Lake Okeechobee and Estuary Recovery (LOER) Plan.

SUBJECT TO: General Conditions 1-24 and Specific Conditions 1-8.

GENERAL CONDITIONS:

The following **General Conditions** are referenced in Florida Administrative Code Rule 62-528.307.

1. The terms, conditions, requirements, limitations and restrictions set forth in this permit are "permit conditions" and are binding and enforceable pursuant to Section 403.141, F.S.
2. This permit is valid only for the specific processes and operations applied for and indicated in the approved drawings or exhibits. Any unauthorized deviation from the approved drawings, exhibits, specifications, or conditions of this permit may constitute grounds for revocation and enforcement action.
3. As provided in Subsection 403.087(7), F.S., the issuance of this permit does not convey any vested rights or exclusive privileges. Neither does it authorize any injury to public or private property or any invasion of personal rights, nor infringement of federal, state, or local laws or regulations. This permit is not a waiver of or approval of any other Department permit that may be required for other aspects of the total project which are not addressed in this permit.
4. This permit conveys no title to land, water, does not constitute State recognition or acknowledgment of title, and does not constitute authority for the use of submerged lands unless herein provided and the necessary title or leasehold interests have been obtained from the State. Only the Trustees of the Internal Improvement Trust Fund may express State opinion as to title.
5. This permit does not relieve the permittee from liability for harm to human health or welfare, animal, or plant life, or property caused by the construction or operation of this permitted source, or from penalties therefrom; nor does it allow the permittee to cause pollution in contravention of Florida Statutes and Department rules, unless specifically authorized by an order from the Department.
6. The permittee shall properly operate and maintain the facility and systems of treatment and control (and related appurtenances) that are installed and used by the permittee to achieve compliance with the conditions of this permit, or are required by Department rules. This provision includes the operation of backup or auxiliary facilities or similar systems when necessary to achieve compliance with the conditions of the permit and when required by Department rules.
7. The permittee, by accepting this permit, specifically agrees to allow authorized Department personnel, upon presentation of credentials or other documents as may be required by law and at reasonable times, access to the premises where the permitted activity is located or conducted to:
 - a. Have access to and copy any records that must be kept under conditions of this permit;
 - b. Inspect the facility, equipment, practices, or operations regulated or required under this permit; and
 - c. Sample or monitor any substances or parameters at any location reasonably necessary to assure compliance with this permit or Department rules.Reasonable time will depend on the nature of the concern being investigated.
8. If, for any reason, the permittee does not comply with or will be unable to comply with any condition or limitation specified in this permit, the permittee shall immediately provide the Department with the following information:
 - a. A description of and cause of noncompliance; and
 - b. The period of noncompliance, including dates and times; or, if not corrected the anticipated time the noncompliance is expected to continue, and steps being taken to reduce, eliminate, and prevent the recurrence of the noncompliance. The permittee shall be responsible for any and all damages which may result and may be subject to enforcement action by the Department for penalties or for revocation of this permit.

GENERAL CONDITIONS:

9. In accepting this permit, the permittee understands and agrees that all records, notes, monitoring data and other information relating to the construction or operation of this permitted source which are submitted to the Department may be used by the Department as evidence in any enforcement case involving the permitted source arising under the Florida Statutes or Department rules, except where such use is proscribed by Sections 403.111 and 403.73, F.S. Such evidence shall only be used to the extent it is consistent with the Florida Rules of Civil Procedure and appropriate evidentiary rules.
10. The permittee agrees to comply with changes in Department rules and Florida Statutes after a reasonable time for compliance; provided, however, the permittee does not waive any other rights granted by Florida Statutes or Department rules.
11. This permit is transferable only upon Department approval in accordance with Rules 62-4.120 and 62-528.350, F.A.C. The permittee shall be liable for any non-compliance of the permitted activity until the transfer is approved by the Department.
12. This permit or a copy thereof shall be kept at the work site of the permitted activity.
13. The permittee shall comply with the following:
 - a. Upon request, the permittee shall furnish all records and plans required under Department rules. During enforcement actions, the retention period for all records shall be extended automatically unless the Department determines that the records are no longer required.
 - b. The permittee shall hold at the facility or other location designated by this permit records of all monitoring information (including calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation) required by the permit, copies of all reports required by this permit, and records of all data used to complete the application for this permit. These materials shall be retained at least three years from the date of the sample, measurement, report, or application unless otherwise specified by Department rule.
 - c. Records of monitoring information shall include:
 - 1) the date, exact place, and time of sampling or measurements;
 - 2) the person responsible for performing the sampling or measurements;
 - 3) the dates analyses were performed;
 - 4) the person responsible for performing the analyses;
 - 5) the analytical techniques or methods used
 - 6) the results of such analyses
 - d. The permittee shall furnish to the Department, within the time requested in writing, any information which the Department requests to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with this permit.
 - e. If the permittee becomes aware that relevant facts were not submitted or were incorrect in the permit application or in any report to the Department, such facts or information shall be corrected promptly.
14. All applications, reports, or information required by the Department shall be certified as being true, accurate, and complete.
15. Reports of compliance or noncompliance with, or any progress reports on, requirements contained in any compliance schedule of this permit shall be submitted no later than 14 days following each scheduled date.
16. Any permit noncompliance constitutes a violation of the Safe Drinking Water Act and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application.

GENERAL CONDITIONS:

17. it shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.
18. The permittee shall take all reasonable steps to minimize or correct any adverse impact on the environment resulting from noncompliance with this permit.
19. This permit may be modified, revoked and reissued, or terminated for cause, as provided in 40 C.F.R. Sections 144.39(a), 144.40(a), and 144.41 (1998). The filing of a request by the permittee for a permit modification, revocation or reissuance, or termination, or a notification of planned changes or anticipated noncompliance, does not stay any permit condition.
20. The permittee shall retain all records of all monitoring information concerning the nature and composition of injected fluid until five years after completion of any plugging and abandonment procedures specified under Rule 62-528.435, F.A.C. The permittee shall deliver the records to the Department office that issued the permit at the conclusion of the retention period unless the permittee elects to continue retention of the records.
21. All reports and other submittals required to comply with this permit shall be signed by a person authorized under Rules 62-528.340(1) or (2), F.A.C. All reports shall contain the certification required in Rule 62-528.340(4), F.A.C.
22. The permittee shall notify the Department as soon as possible of any planned physical alterations or additions to the permitted facility. In addition, prior approval is required for activities described in Rule 62-528.410(1)(h).
23. The permittee shall give advance notice to the Department of any planned changes in the permitted facility or injection activity which may result in noncompliance with permit requirements.
24. The permittee shall report any noncompliance which may endanger health or the environment including:
 - a. Any monitoring or other information which indicates that any contaminant may cause an endangerment to an underground source of drinking water; or
 - b. Any noncompliance with a permit condition or malfunction of the injection system which may cause fluid migration into or between underground sources of drinking water.

All information shall be provided orally within 24 hours from the time the permittee becomes aware of the circumstances. A written submission shall also be provided within 5 days of the time the permittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause, the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and the steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance.

[space intentionally blank]

SPECIFIC CONDITIONS:

1. General Requirements

- a. The terms, conditions, requirements, limitations and restrictions set forth in this permit are "permit conditions" and are binding and enforceable pursuant to Section 403.141, F.S.
- b. This permit is for the SFWMD to construct and test a single zone monitoring well, referred to herein as CFA-MW1, at the L-63N Canal ASR Facility. This permit does not authorize the construction or operational testing of any other well or wells associated with the L-63N Canal ASR System project.
- c. This permit approval is based upon evaluation of the data contained in the application and the plans and specifications submitted in support of the application. Any changes, except as provided elsewhere in this permit, must be approved by the Department before implementation.
- d. The permittee shall be subject to all requirements and regulations of Okeechobee County and the South Florida Water Management District (SFWMD) regarding the construction and testing of this single zone monitoring well.
- e. If historical or archaeological artifacts, such as Indian canoes, are discovered at any time within the project site, the permittee shall notify the FDEP Southeast District office in West Palm Beach and the Bureau of Historic Preservation, Division of Archives, History and Records Management, R. A. Gray Building, Tallahassee, Florida 32301, telephone number (850) 487-2073.

2. Construction and Testing Requirements

- a. Prior to the commencement of any work, the name of the Florida-licensed water well contractors supervising the drilling operations and the water well contractors' registration number shall be submitted to the Department. The permittee or the engineer of record shall provide the Department with copies of all required federal, state or local permits prior to spudding the single zone monitoring well.
- b. A Department approved blow-out prevention device shall be installed on the well prior to penetration of the Floridan aquifer.
- c. The measurement points for drilling and logging operations shall be surveyed and referenced to the North American Vertical Datum of 1988 (NAVD 88) prior to the onset of drilling activities for the single zone monitoring well.
- d. No drilling operations shall begin without an approved disposal site for drilling fluids, cuttings, or waste. It shall be the permittee's responsibility to obtain the necessary approval(s) for disposal prior to the start of construction. Any formation waters discharged to surface or surficial aquifer waters during an aquifer performance test shall require an Industrial Wastewater permit from the Department, unless otherwise authorized.
- e. The Department shall be notified within 48 hours after work has commenced.
- f. Hurricane Preparedness – Upon the issuance of a "Hurricane Watch" by the National Weather Service, the preparations to be made include but are not necessarily limited to the following:
 - 1) Secure all on-site salt and stockpiled additive materials to prevent surface and/or groundwater contamination.
 - 2) Properly secure drilling equipment and rig(s) to prevent damage to well(s) and on-site treatment process equipment.
- g. Waters spilled during construction or testing of the single zone monitoring well shall be contained and properly disposed.

SPECIFIC CONDITIONS:

- h. Department approval and UIC-TAC review are required prior to the following stages of construction:
- 1) Spud date for the well
 - 2) 10-inch diameter PVC casing seat in monitoring well
 - 3) Monitoring zone interval determination
- i. The drilling and geophysical logging program, during the drilling of the single zone monitoring well, shall at a minimum include:
- 1) Install an 18-inch O.D. steel surface casing from approximately 0-60 feet bpl.
 - 2) Drill a nominal 17-inch diameter hole using the mud rotary method from the landing of the pit casing to approximately 710 feet bpl. Perform the following logging techniques subsequent to drilling:
 - Natural gamma ray
 - Dual induction
 - Caliper
 - 3) Install and cement in place 10-inch diameter (10.75-inch O.D., 9.31-inch I.D.) PVC casing (to approximately 700 feet bpl). The casing will have neat cement with up to 6% bentonite filled annulus. Run temperature log after each lift.
 - 4) Drill a nominal 9-inch diameter pilot hole using a standard reverse air rotary drilling method from approximately 700 feet bpl to approximately 775 feet bpl. Collect one core within this interval for geotechnical and petrographic analysis, collect water samples at each drill rod connection (approximately every 20 to 30 feet), develop the open hole interval, perform a short-term (approximately 15 minute duration) specific capacity test, collect water samples from the open hole section, and perform the following logging techniques in the open hole section:
 - Natural gamma ray
 - Dual induction
 - Caliper
 - Borehole video survey
 - Temperature/differential temperature
 - Fluid resistivity
 - Flowmeter
 - Temperature/differential temperature (dynamic conditions)
 - Fluid resistivity (dynamic conditions)
 - Flowmeter (dynamic conditions)
 - 5) Conduct an 8 to 10-hour drawdown and recovery test at an anticipated rate of 200 to 300 gallons per minute (gpm). Collect water samples at the beginning, middle and end of the drawdown portion of the test.
 - 6) Water samples (entailed above) will be analyzed as follows:
 - a) Samples collected at each drill rod connection below 700 feet bpl (approximately every 20 to 30 feet) – chloride, sulfate, total dissolved solids (TDS), specific conductance, temperature and pH;
 - b) Water samples collected from the open hole section prior to the 8 to 10-hour drawdown and recovery test – all parameters listed in Item a) above, plus calcium, sodium, magnesium, potassium, total alkalinity, total and noncarbonated hardness, iron, silica and strontium;

SPECIFIC CONDITIONS:

- c) Water samples collected at the beginning, middle and end of the drawdown test - all parameters listed in Item b) above, plus the primary and secondary drinking water quality standards and minimum criteria listed in Attachment A.
 - j. Testing:
 - 1) Injection is prohibited as this is a single zone monitoring well.
 - k. UIC-TAC meetings are scheduled on the 2nd and 4th Tuesday of each month subject to a five working day prior notice and timely receipt of critical data by all TAC members. Emergency meetings may be arranged when justified to avoid undue construction delays.
 - l. Department approval at a scheduled TAC meeting shall be based on the permittee's presentation that shows compliance with Department rules and this permit.
 - m. No fluids shall be injected with the exception of fluids used while drilling operations are under way.
3. Quality Assurance/Quality Control Requirements
- a. The permittee shall ensure that the construction of this facility shall be as described in the application and supporting documents. Any proposed modifications to this permit shall be submitted in writing to the Underground Injection Control program manager for review and clearance prior to implementation. Changes of negligible impact to the environment and staff time will be reviewed by the program manager, cleared when appropriate and incorporated into this permit. Changes or modifications other than those described above will require submission of a completed application and appropriate processing fee as per Rule 62-4.050, F.A.C.
 - b. A Florida registered professional engineer, pursuant to Chapter 471, Florida Statutes (F.S.), shall be retained throughout the construction period and operational testing to be responsible for the construction and operation and to certify the application, specifications and completion report and other related documents, pursuant to Rule 62-528.440(5), F.A.C. A professional engineer or professional geologist, pursuant to Chapter 492, F.S., shall provide monitoring of the drilling and testing operation. The permittee shall notify the Department immediately of any change of the Engineer of Record or Geologist of Record.
 - c. In accordance with Section 492, Florida Statutes, all documents prepared for the geological/hydrogeological evaluation of the single zone monitoring well shall be signed and sealed by a Florida Licensed Professional Geologist or qualified Florida Licensed Professional Engineer.
 - d. All water quality samples required in this permit shall be collected and analyzed in accordance with Department Standard Operating Procedures (SOP), pursuant to the FDEP Quality Assurance, Chapter 62-160, F.A.C. The various components of the collection of the FDEP SOPs are found in DEP-SOP-001/01 (Field Procedures) and DEP-SOP-002/-1 (Laboratory Procedures).
 - e. Continuous on-site supervision by qualified personnel (engineer or geologist) is required during all testing, geophysical logging and cementing operations.

SPECIFIC CONDITIONS:

- f. The permittee shall calibrate all pressure gauge(s), flow meter(s) and other related measurement equipment associated with the injection well system on a semi-annual basis. The permittee shall maintain all monitoring equipment and shall ensure that the monitoring equipment is calibrated and in proper operating condition at all times. Laboratory equipment, methods, and quality control will follow EPA guidelines as expressed in Standard Methods for the Examination of Water and Wastewater. The pressure gauge(s), flow meter(s) and other related measurement equipment associated with the injection well system shall be calibrated using standard engineering methods.
 - g. Proper operation and maintenance includes effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures.
4. Reporting Requirements
- a. This project shall be monitored by the Department and the TAC, which consists of representatives of the following agencies:
 - Department of Environmental Protection, West Palm Beach
 - Department of Environmental Protection, Tallahassee
 - South Florida Water Management District (SFWMD), West Palm Beach
 - United States Geological Survey (USGS)-Fort Lauderdale office, Final Report only
 - b. The permittee shall provide copies of all correspondence relative to this permit to each member of the UIC-TAC. Such correspondence includes but is not limited to reports, schedules, analyses and geophysical logs required by the Department under the terms of this permit. The permittee is not required to provide specific correspondence to any UIC-TAC member who submits to the permittee a written request to be omitted as a recipient of specific correspondence.
 - c. Throughout the construction period allowed by this permit, daily progress reports shall be submitted to the Department and the TAC each week. The reporting period shall run Friday through Thursday and reports shall be mailed on Friday of each week. The weekly progress reports, certified by a Florida Licensed Professional Geologist or qualified Florida Licensed Professional Engineer, pursuant to S.C.s 3.b. and 7.a., and shall include at a minimum the following information:
 - 1) A cover letter summarizing each week's activities and a projection of activities in the next reporting period;
 - 2) Description of daily footage drilled by diameter of bit, or size of hole opener, or reamer being used;
 - 3) Description of work during installation and cementing of casing, including amounts of casing and cement used. Details of cementing operations shall include the number of cementing stages, and the following information for each stage of cementing: volume of cement pumped, theoretical fill depth, and actual tag depth. From both the physical tag and the geophysical logs, a percent fill shall be calculated. An explanation of any deviation between actual versus theoretical fill shall be provided;
 - 4) Daily engineers report and driller's log with detailed descriptions of all drilling progress, cementing, testing, logging, and casing installation activities;
 - 5) Lithologic log with cuttings description, formation and depth encountered;
 - 6) Collection of drilling cuttings at least every 10 feet and at every formation change;
 - 7) Well development records;

SPECIFIC CONDITIONS:

- 8) Water quality analyses;
 - 9) Description of work and type of testing accomplished including geophysical and video logs and pumping tests;
 - 10) Description of any construction problems that developed during the reporting period and current status;
 - 11) Copies of the driller's log;
 - 12) Description of any deviation survey conducted;
 - 13) Details of any packer tests, pump tests and core analyses; and
 - 14) Details of the additions of salt or other materials to suppress well flow, including the date, depth and amount of material used.
- d. If any problem develops that may seriously hinder compliance with this permit, construction progress or good construction practice, the Department shall be notified immediately. The Department may require a detailed written report describing what problems have occurred, the remedial measures applied to assure compliance and the measures taken to prevent recurrence of the problem.
- e. Abnormal Events
- 1) In the event the permittee is temporarily unable to comply with any conditions of this permit due to breakdown of equipment, power outages, destruction by hazard of fire, wind or by other cause, the permittee shall notify the Department. Notification shall be made in person, by telephone or by electronic mail within 24 hours of breakdown or malfunction to the UIC Program staff, SED office in West Palm Beach.
 - 2) A written report of any noncompliance referenced in Specific Condition (S.C.) 4.e above shall be submitted to the SED office within five days after discovery of the occurrence. The report shall describe the nature and cause of the breakdown or malfunction, the steps being taken or planned to be taken to correct the problem and prevent its reoccurrence, emergency procedures in use pending correction of the problem, and the time when the facility will again be operating in accordance with permit conditions.
- f. An interpretation of all test results must be submitted with all submittals.
- g. Within 30 days of well completion of UFA-MW1, the permittee or the authorized representative shall submit to the Department the following information:
- 1) Certification of Monitor Well Completion, DEP Form 62-528.900(10);
- h. Upon completion of construction of the well, a complete set of as-built engineering drawings (Florida registered P.E. signed and sealed) for Monitoring Well UFA-MW1 shall be submitted to the Department's SED office in West Palm Beach and Tallahassee UIC Program.
- i. After completion of construction and testing of the well, the following requirements shall apply:
- 1) A final engineering report shall be submitted to the Department and TAC. The report shall include, but not be limited to, all information and data collected under Rules 62-528.605, 62-528.615, and 62-528.635, F.A.C., with appropriate interpretations. This report shall also be signed and sealed by a Florida licensed professional engineer and professional geologist.

SPECIFIC CONDITIONS:

- 2) The permittee shall contact the UIC Section of the Department of Environmental Protection in Tallahassee to arrange for the transfer, at the permittee's expense, of the following items to the State Geologist at the Florida Geological Survey, 903 West Tennessee Street, Tallahassee, Florida 32304-7707:
 - a) Cuttings obtained during well construction;
 - b) Any cores obtained during well construction when no longer needed by the permittee;
 - c) Any water samples collected during packer testing and final background water sampling;
 - d) Any geophysical logs run during well construction; and
 - e) A copy of the final report described in S.C. 4.i.1) above.
- 3) The permittee shall submit the following to the Department and TAC:
 - a) Surface equipment completion certification or certification of interim completion for the purposes of testing;
 - b) Signed and sealed record (as-built) engineering drawings of all well construction, subsurface and surface equipment, and appurtenances. The drawings shall include but not be limited to the wellhead, subsurface well components; and
 - c) All other applicable permits.
- j. The Department shall conduct an inspection of the facility to determine if the conditions of this permit have been met. FPL shall contact the Underground Injection Control Section of the Department, SED, to arrange for the site inspection. The inspection will determine if all equipment necessary for UFA-MW1 is in compliance with the permit and Department rules. During the inspection, reporting requirements shall be reviewed.
- k. A minimum of three well volumes of fluid shall be evacuated prior to sampling for water quality parameters. A State-certified laboratory shall analyze all samples. Sufficient purging shall have occurred when either of the following have occurred:
 - 1) pH, specific conductance and temperature when sampled, upon purging the third or subsequent well volume, each vary less than 5% from that sampled upon purging the previous well volume; or
 - 2) upon purging the fifth well volume.

Alternative sampling methodology may be proposed for Departmental review and approval prior to actual sampling.

- l. All well system data submittals shall be clearly identified on each page with: facility name, i.D. Number, permit number, date of sampling/recording, and type of data.

5. Surface Equipment

- a. The integrity of the monitoring zone sampling systems shall be maintained at all times. Sampling lines shall be clearly and unambiguously identified by monitoring zone at the point at which samples are drawn. All reasonable and prudent precautions shall be taken to ensure that samples are properly identified by monitoring zone and that samples obtained are representative of those zones. Sampling lines and equipment shall be kept free of contamination with independent discharges and no interconnections with any other lines.

SPECIFIC CONDITIONS:

- b. The surface equipment for the injection well system shall maintain access for logging and testing, and reliability and flexibility in the event of damage to the well and piping. A regular program of exercising the valves integral to the wellhead shall be instituted. At a minimum, all valves integral to the wellhead shall be exercised at the time of each cycle change.
- c. The monitoring well surface equipment and piping shall be kept free of corrosion at all times.
- d. Spillage onto the well pad during construction activities, and any waters spilled during testing, other maintenance or repairs to the system shall be contained by an impermeable structure around the edge of the pad and disposed of via approved and permitted methods.

6. Plugging and Abandonment and Alternate Use Plans

- a. Permittees who are unable to operate the well to meet its intended purpose shall within 180 days of FDEP notification:
 - 1) Submit a plugging and abandonment permit application in accordance with Rules 62-528.625 and 62-528.645, F.A.C., or
 - 2) Submit an alternate use plan for the well. Alternate use may commence after the plan has been approved by the Department, including any necessary permit or permit modifications as required by the Department or any other agency, or
 - 3) Implement the plugging and abandonment plan.

7. Signatories

- a. All reports and other submittals required to comply with this permit shall be signed by a person authorized under Rules 62-528.340(1) or (2), F.A.C.
- b. In accordance with Rule 62-528.340(4), F.A.C., all reports shall contain the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

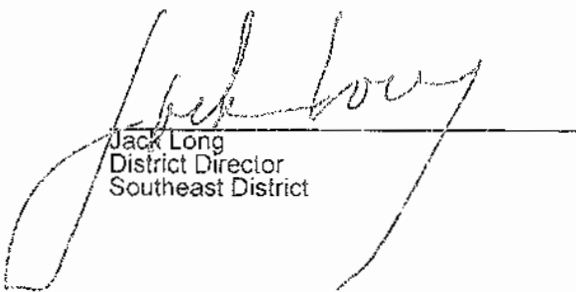

SPECIFIC CONDITIONS:

8. Permit Extension(s) and Renewal(s)

- a. Pursuant to Rule 62-4.080(3), a permittee may request that a permit be extended as a modification of an existing permit. A request for an extension is the responsibility of the permittee and shall be submitted to the Department before the expiration of the permit. In accordance with Rule 62-4.070(4), F.A.C., a permit cannot be extended beyond the maximum 5-year statutory limit.

Dear Interested Parties:

SUBJECT: Weekly Summary Report No.1 – June 26, 2008 through July 4, 2008
South Florida Water Management District, Upper Floridan Aquifer Monitor Well
OKF-106 (UFA-MW1)
FDEP UIC Well Construction Permit Number 0198641-009-UC

The purpose of this letter is to inform the Florida Department of Environmental Protection (Department) of events that transpired during the first full week of construction on the upper Floridan aquifer monitor well identified as OKF-106 (UFA-MW1) and those activities anticipated for the next report period.

The first full week of construction and related activities for OKF-106 (UFA-MW1) are summarized below;

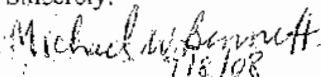

- Completed Mobilization of drill rig and support equipment.
- Confirmed lateral distance of UFA Monitor Well (OKF-106) from the ASR well to be 140.5 feet (center to center) prior to the start of drilling activities.
- Drilled a nominal 8-inch diameter pilot hole from land surface to 82 feet below land surface (bls) via mud rotary method.
- Reamed the 8-inch diameter pilot hole to 23-inches in diameter using a 12 ¼ x 23 inch diameter drilling assembly from land surface to 85 feet bls via mud rotary method.
- Circulated the nominal 23-inch diameter for approximately 2 hours to condition it before installing the 18-inch diameter steel surface casing.
- Installed 84.2 feet of 18-inch diameter steel surface casing set to a depth of 82.2 feet bls.
- Cemented the 18-inch diameter in place using 3.5 cubic yards of ASTM Type II neat cement.
- Installed rotating head on 18-inch diameter steel surface casing to control potential artesian flow conditions while advancing the borehole through the intermediate confining unit and into the Floridan Aquifer.
- Drilled out cement plug at the base of the 18-inch diameter steel casing.
- No Work on Friday July 4th.

Work scheduled for next week:

Begin to drill a nominal the 17-inch diameter borehole from 82 feet bls and continue to advance the borehole to an anticipated depth of 550 feet bls.

If you have any questions or concerns based on the information provided above, please contact the undersigned at 561-684-3375.

Sincerely:

Michael W. Bennett, P.G.
Senior Hydrogeologist

DAILY REPORT OF CONSTRUCTION

Project Number: 17191.00	Project Name: L63A	Client: SFWMD	Date: 7/2/08	Day of Week: Tuesday	Contractor: Applied Drilling Engineering (ADE)
Well Name: UFA MW-1	FDEP Permit #: 0198641-009-UC	Starting Depth: 0'	Ending Depth: 85'	Bit Size: 23"	Weather: Sunny and Warm

PRIMARY ACTIVITY: Pilot Hole for Pit Casing
RESIDENT OBSERVER/GEOLOGIST: Shamus English
DRILLER: Joe Schmidt

Time	Activity
0830	Shamus English on site. ADE on site and drilling at time of arrival. Depth at about 55 ft bls. Kelly down will be 65 ft bls. Bit size = 23".
0847	Kelly down at 65 ft bls, circulating on bottom.
0855	ADE mixing mud
0928	Drilling resumed at 65 ft bls
1001	Kelly down at 85 ft bls, circulating on bottom
1020	ADE tripping out of hole.
1050	ADE setting up to perform casing installation. Heat number GO17564
1055	Welding centralizers on bottom 90° apart. Roy Rowland (ADE) is welder.
1110	Welding casing section 1 and 2 together. ADE performing 1 pass across connection. Tallied length of casing is 84.2 ft.
1124	ADE finish welding sections 1 and 2
1134	Lowering casing
1144	Welding sections 2 and 3
1201	Finish welding section 2 and 3
1211	Lowering casing
1220	Welding sections 3 and 4
1235	Lowering casing, slight trouble lowering casing to bottom
1242	Casing set
1247	Lowering tremie tubing (2" TNC w/ API coupling)
1300	Finished lowering tremie tubing to 73 ft bls. ADE circulating fluids while waiting on cement truck
1315	SE off site
1340	SE on site
1420	ADE preparing for cementing operations, continued to circulate fluids
1515	ADE discontinued circulation, still waiting on ready mix truck
1600	Ready mix truck on site with 4 yds ³ of neat cement. Cement truck to pour cement into 150 gal tub then pressure grouted down hole through tremmie pipe. Mud weight at 15.6 lbs/gal

1604	Pre-flush 150 gallons of water
1605	Commence pumping cement.
1610	Cementing halted. Thinning cement with approx. 150 gallons of water.
1614	Resume pumping cement, new weight is 14.7 lbs/gallon
1625	Cement at surface. Pumping displacement water
1627	Ready mix truck emptying remaining cement on ground. Approx. .5 yds ³ of left over cement so, Approx. 3.5 yds ³ of cement used on pit casing. 18 psi pressure at well head
1640	Ready mix truck off site. ADE adding Thinz-It® mud thinner
1700	Shamus English off site.

Employee Owned

July 14, 2008

Dear Interested Parties:

SUBJECT: Weekly Summary Report No.2 – July 7, 2008 through July 13, 2008
South Florida Water Management District, Upper Floridan Aquifer Monitor Well
OKF-106 (UFA-MW1)
FDEP UIC Well Construction Permit Number 0198641-009-UC

The purpose of this letter is to inform the Florida Department of Environmental Protection (Department) of events that transpired during the second week of construction on the upper Floridan aquifer monitor well identified as OKF-106 (UFA-MW1) and those activities anticipated for the next report period.

The construction and related activities that transpired during the second week related to OKF-106 (UFA-MW1) are summarized below;

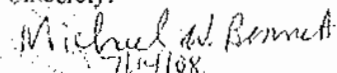

- Began drilling a nominal 17-inch diameter borehole via the mud rotary method at a depth of 82 feet below land surface (bls).
- Continued to advance the nominal 17-inch diameter borehole via the mud rotary method from 82 to 502 feet bls.
- Ended mud rotary drilling operations for the week at a depth of 502 feet bls.
- No drilling or testing activities were conducted on Saturday July 12th or Sunday July 13th.

Work scheduled for the next report period:

The Contractor will continue to advance the nominal the 17-inch diameter borehole via the mud rotary method from 502 feet bls to an anticipated depth of 710 feet bls. This will be approximately 10 feet into the carbonate section of the Floridan aquifer. The nominal 17-inch borehole will then be geophysically logged from 0 to 710 feet bls. A casing seat justification for the 10-inch diameter PVC casing will be submitted to the Department for approval. Depending on the timeliness of completing the 17-inch diameter borehole to 710 feet bls; the Contractor may upon approval by the SFWMD begin installing the 10-inch diameter Certa-lok PVC well casing into the uppermost section of the Floridan aquifer. Once the 10-inch diameter casing is installed, it will be carefully cemented back to surface with temperature logs conducted to verify the elevation of the cement within the annulus.

If you have any questions or concerns based on the information provided above, please contact the undersigned at 561-684-3375.

Sincerely:

7/14/08

DAILY REPORT OF CONSTRUCTION

Project Number: 17191.00	Project Name: L63A	Client: SFWMD	Date: 7/8/08	Day of Week: Tuesday	Contractor: Applied Drilling Engineering (ADE)
Well Name: OKF-106	FDEP Permit #: 0198641-009-UC	Starting Depth: 116.5'	Ending Depth: 236.5'	Bit Size: 17"	Weather: Sunny and Warm

PRIMARY ACTIVITY: Drill Nominal 17-inch Borehole
RESIDENT OBSERVER/GEOLOGIST: Shamus English
DRILLER: Joe Schmidt

Time	Activity
0800	Shamus English on site. ADE on site at time of arrival and repairing leak in hydraulic line.
0840	ADE spooling wire line cable around drum on rig for deviation surveys.
0905	Finished spooling cable, setting up for deviation survey. Rubber stabilizers for deviation survey are designed for 4½" drill pipe and ADE is using 3½" drill pipe, ADE will not attach tool stabilizers for deviation surveys.
0915	ADE tripping pipe out of hole to 76 ft bls to run deviation survey, will lower tool to bottom and raise 16 ft. Bit assembly is within pit casing.
0921	Timer set at 10 mins, lowering tool down hole.
0935	Raising tool to surface
0940	Deviation survey measured at 0.1°.
0943	Adding 2 more sections of drill pipe and taking another deviation survey at 120 ft bls (survey actually taken at 116.5 ft bls).
0946	Lowering tool down hole.
1005	Deviation survey measured at 0.2°.
1025	Drilling commenced at 116.5 ft bls
1037	Kelly down at 136.5 ft bls, circulating on bottom
1040	Mud weight at 9.0 lbs/gal going in, 9.5 lbs/gal going out of system. Viscosity measured in Marsh funnel at 57 secs for approx. 1 Liter (measuring cup not used so actual value is believed to be lower).
1122	Drilling resumed at 136.5 ft bls.
1133	Kelly down at 156.5 ft bls, circulating on bottom
1145	ADE removing cuttings from settling tank to cuttings holding tank.
1210	ADE attaching drill pipe #4 (20 ft)
1213	Drilling resumed at 156.5 ft bls
1233	Kelly down at 176.5 ft bls, circulating on bottom. Received last weeks contractor drilling logs from ADE.
1300	ADE attaching drill pipe #6 to drill string and setting up for deviation survey.
1305	Lowering deviation tool down hole
1323	Deviation survey measured at 0.2 (approx. 180 ft bls).
1330	ADE taking lunch. Shamus English off site.

1545	Shamus English on site. Kelly down at 216.5 ft bls at time of arrival and circulating on bottom.
1617	Drilling resumed at 216.5 ft bls
1643	Depth at 225 ft bls
1710	Kelly down at 236.5 ft bls, circulating on bottom.
1728	ADE attaching drill pipe #9 to drill string and setting up for deviation survey
1733	Lowering tool down hole.
1758	Deviation survey measured at 0.8°. Variation from last survey (176.5 ft bls) is 0.6°, notified Michael Bennett via telephone. Per Michael Bennett, variation is too high between survey measurements and another survey will need to be conducted tomorrow morning at 176.6 ft bls for verification. Advised Joe Schmidt (ADF) of this situation and agreed to run another survey in the morning.
1810	Shamus English off site.

PRIMARY ACTIVITY: Drill Nominal 17-inch Borehole
RESIDENT OBSERVER/GEOLOGIST: Shamus English
DRILLER: Joe Schmidt

Time	Activity
0800	Shamus English on site. ADE on site at time of arrival. Waiting on rental company to deliver compressor for bladder pump before drilling. 40 sections of drill pipe delivered to site last night.
0830	ADE mixing mud and performing rig and site maintenance.
0845	Compressor on site. ADE tripping pipe to bottom.
0935	Drilling commenced at 336.5 ft bls.
1030	Mud weight at 8.9 lbs/gal going in and 9.3 lbs/gal coming out. Viscosity measured at 40 seconds for 1 liter.
1040	Kelly down at 356.5, circulating on bottom
1108	ADE attaching drill pipe # 15 and setting up for deviation survey
1125	Deviation survey measured at 0.3° at 360 ft bls (356.5 ft actual).
1128	Drilling resumed at 356.5 ft bls
1148	Waste Management on site to remove filled cuttings tank and replace with empty tank.
1154	Kelly down at 376.5, circulating on bottom.
1240	Drilling resumed at 376.5 ft bls
1322	Kelly down at 396.5 ft bls, circulating on bottom
1353	ADE mixing mud
1417	Attaching drill pipe #17 to drill string
1422	Drilling resumed at 396.5 ft bls
1435	Mud weight at 9.1 lbs/gal going in and 9.2 lbs/gal coming out.
1439	Kelly down at 426.5 ft bls, circulating on bottom
1502	Attaching drill pipe #18 to drill string and setting up for deviation survey
1537	Deviation survey measured at 0.2° at 420 ft bls (416.5 ft actual).
1540	Drilling resumed at 416.5 ft bls
1553	Kelly down at 436.5 ft bls, circulating on bottom
1613	Attaching drill pipe #19 to drill string
1616	Drilling resumed at 436.5 ft bls
1633	Kelly down at 456.5 ft bls, circulating on bottom

1658	Attaching drill pipe #21 to drill string
1704	Drilling resumed at 456.5 ft bls
1727	Kelly down at 476.5 ft bls, circulating on bottom
1745	Attaching drill pipe #22 to drill string and setting up for deviation survey
1808	Deviation survey measured at 0.5° at 480 ft bls (476.5 ft actual).
1810	Shamus English off site. ADE to trip pipe up to casing before securing site.

July 21, 2008

Dear Interested Parties:

SUBJECT: Weekly Summary Report No.3 – July 14, 2008 through July 20, 2008
 South Florida Water Management District, Upper Floridan Aquifer Monitor Well
 OKF-106 (UFA-MW1)
 FDEP UIC Well Construction Permit Number 0198641-009-UC

The purpose of this letter is to inform the Florida Department of Environmental Protection (Department) of events that transpired during the third week of construction on the upper Floridan aquifer monitor well identified as OKF-106 (UFA-MW1) and those activities anticipated for the next report period.

The construction and related activities that transpired during the third week related to OKF-106 (UFA-MW1) are summarized below;

- Continued to advance the nominal 17-inch diameter borehole via the mud rotary method from 502 to 597 feet bls.
- Ended mud rotary drilling operations for the week at a depth of 597 feet bls.
- No drilling or testing activities were conducted on Saturday July 19th or Sunday July 20th.

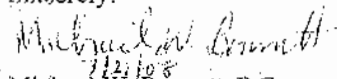

On Friday, July 17, 2008 the deviation of the borehole from center was measured at 1.7°. In an attempt to bring the borehole back to center the Contractor pulled out the nominal 17-inch diameter bit assembly and will begin to drill the remaining portion of the borehole using a nominal 12-inch diameter bit.

Work scheduled for the next report period:

The Contractor will begin advancing a nominal 12-inch diameter borehole from 597 feet bls to an anticipated depth of 710 feet bls in an attempt to bring the borehole back to center. When completed, the borehole will be geophysically logged from land surface to a depth of 710 feet. Based on the lithologic and geophysical logs, a casing seat justification for the 10-inch diameter PVC casing will be submitted to the Department for approval. In the interim, the Contractor will begin to ream the 12-inch diameter borehole to a nominal 17-inch diameter from 597 feet bls to approximately 710 feet bls via the mud rotary method. The setting depth of 710 feet will be approximately 10 feet into the carbonate section of the Floridan aquifer. Depending on the timeliness of completing the 17-inch diameter borehole to 710 feet bls; the Contractor may begin installing the 10-inch diameter Certa-lok PVC well casing. Once the 10-inch diameter casing is installed, it will be carefully cemented back to surface with the elevation of the cement within the annulus verified by physical hard tags using a collarless tremie pipe and temperature logs.

If you have any questions or concerns based on the information provided above, please contact the undersigned at 561-684-3375.

Sincerely:

 Michael W. Bennett, P.G.
 Senior Hydrogeologist

DAILY REPORT OF CONSTRUCTION

Project Number: 17191.00	Project Name: L63N	Client: SFWMD	Date: 7/14/08	Day of Week: Monday	Contractor: Applied Drilling Engineering (ADE)
Well Name: OKF-106	FDEP Permit #: 0198641-009-UC	Starting Depth: 502'	Ending Depth: 516.5'	Bit Size: 17"	Weather: Sunny and Warm

PRIMARY ACTIVITY: 17" Borehole Drilling
RESIDENT OBSERVER/GEOLOGIST: Shamus English
DRILLER: Joe Schmidt

Time	Activity
1215	Shamus English on site. ADE on site and setting up for drilling activities at time of arrival
1255	Drilling commenced for the day at 502 ft bls. Drilling through dense clay, rate of penetration is very slow
1400	Depth at about 504 ft bls
1420	Rain Storm over head, ADE continue drilling without person operating brake handle.
1440	Storm passed, light drizzle.
1500	Depth at about 505 ft bls.
1520	ADE attaching couplings to ends of PVC casing, SE numbering each section of PVC casing.
1600	Depth at about 507 ft bls. Rate of penetration picking up. PVC section labeled #6 has 1 foot cut off at the end for mule shoe (#6 is 19 ft long).
1700	Depth at about 512 ft bls.
1800	Shamus English off site. Depth at about 515 ft bls, Kelly down will be 516.5 ft bls. ADE to drill to Kelly down and trip pipe up into casing before securing site.

DAILY REPORT OF CONSTRUCTION

Project Number: 17191.00	Project Name: L63N	Client: SFWMD	Date: 7/16/08	Day of Week: Wednesday	Contractor: Applied Drilling Engineering (ADE)
Well Name: OKF-106	FDEP Permit #: 0198641-009-UC	Starting Depth: 536.5'	Ending Depth: 563'	Bit Size: 17"	Weather: Sunny and Warm

PRIMARY ACTIVITY: 17" Borehole Drilling
RESIDENT OBSERVER/GEOLOGIST: Shamus English
DRILLER: Joe Schmidt

Time	Activity
0800	Shamus English on site. ADE on site at time of arrival. Circulating on bottom at 536.5 ft bls before taking 4 th deviation survey. ADE built a lined and bermed containment area around roll-off tanks west of rig.
0835	Deviation survey #4 at 540 ft bls measured at 1.1° which is still out of compliance with specs. Per Michael Bennett, advise ADE to make a decision as to how they are to remedy this problem.
0845	Per Joe S. (ADE), they are going to continue drilling and take another deviation survey at 600 ft bls, notified Michael Bennett.
0855	Per Michael Bennett, he spoke with Paul P. (ADE) and it was agreed to take deviation surveys every 20 ft until borehole is back to center.
0920	Drilling commenced at 536.5 ft bls. Clayton M. (SFWMD) on site.
1045	Paul P. (ADE) on site.
1110	Paul P. (ADE) off site. Rain storm over head.
1130	Storm passed, slight drizzle.
1215	Kelly down at 556.5 ft bls, circulating on bottom.
1226	Attaching drill pipe #25 to drill string and setting up for deviation survey.
1305	Deviation survey measured at 0.9°, borehole appears to be pulling back to center.
1315	Drilling resumed at 556.5 ft bls, Drilling with very low weight on bit in dense clay, very slow rate of penetration.
1415	Depth at about 558 ft bls.
1500	Depth at about 559 ft bls.
1600	Depth at about 560 ft bls.
1700	Depth at about 562 ft bls.
1800	Depth at about 563 ft bls.
1815	Drilling halted for the day at 563 ft bls
1830	Shamus English off site.

Recorded By: Shamus English

DAILY REPORT OF CONSTRUCTION

Project Number: 17191.00	Project Name: L63N	Client: SFWMD	Date: 7/16/08	Day of Week: Thursday	Contractor: Applied Drilling Engineering (ADE)
Well Name: OKF-106	FDEP Permit #: 0198641-009-UC	Starting Depth: 563'	Ending Depth: 596.5'	Bit Size: 17"	Weather: Sunny and Warm

PRIMARY ACTIVITY: 17" Borehole Drilling
RESIDENT OBSERVER/GEOLOGIST: Shamus English
DRILLER: Joe Schmidt

Time	Activity
0800	Shamus English on site. ADE on site and mixing mud for today's drilling activities at time of arrival. Paul P. (ADE) on site.
0815	Drilling commenced for the day.
0830	Depth at about 565 ft bls.
0900	Depth at about 71 ft bls, rate of penetration has increased.
0920	Kelly down at 576.5 ft bls, circulating on bottom.
0935	Attaching drill pipe #26 to drill string and running deviation survey.
1000	Deviation survey measured at 1.4°. ADE is going to rotate drill string 180° and run another deviation survey to see if possibly the collars are slightly bent causing false drift indicator readings.
1030	Second deviation survey at 576.6 ft bls measured 1.5°. ADE is going to drill down another 20 ft with high rpm's and very low weight on bit before running another deviation survey.
1040	Drilling resumed at 576.5 ft bls.
1245	Kelly down at 596.5 ft bls, circulating on bottom.
1300	Attaching drill pipe #27 to drill string and running deviation survey.
1335	Deviation survey at 596.5 ft bls measured 1.7°. ADE is going to run another survey with plastic stabilizers on tool.
1345	Shamus English off site.
1515	Shamus English on site. Second deviation survey at 596.5 ft bls measured 1.7°. ADE is going to trip pipe out of hole and replace 17" bit with a smaller diameter bit, probably 12", in an attempt to bring borehole back to center.
1530	Shamus English off site.

July 28, 2008

Dear Interested Parties:

SUBJECT: Weekly Summary Report No.4 – July 21, 2008 through July 27, 2008
 South Florida Water Management District, Upper Floridan Aquifer Monitor Well
 OKF-106 (UFA-MW1)
 FDEP UIC Well Construction Permit Number 0198641-009-UC

The purpose of this letter is to inform the Florida Department of Environmental Protection (Department) of events that transpired during the fourth week of construction on the upper Floridan aquifer monitor well identified as OKF-106 (UFA-MW1) and those activities anticipated for the next report period.

The construction and related activities that transpired during the fourth week related to OKF-106 (UFA-MW1) are summarized below;

- Continued to advance the nominal 17-inch diameter borehole via the mud rotary method from to 597 to 720 feet bls.
- Ended mud rotary drilling operations for the week at a depth of 720 feet bls.
- Completed geophysical logging in the nominal 17-inch diameter borehole from land surface to 720 feet bls.
- No drilling or testing activities were conducted on Saturday July 26th or Sunday July 27th.

On Friday, July 25, 2008 geophysical logs were completed on the nominal 17-inch diameter borehole. Based on the lithologic and geophysical logs, a casing seat justification for the 10-inch diameter PVC casing was submitted electronically to the Department on Sunday July 27th for approval.

Work scheduled for the next report period:

Once the casing setting depth recommendation is approved by the Department, the Contractor will begin to ream the bottom 30 feet of the nominal 12-inch diameter borehole to a depth of 720 feet bls via the mud rotary method. The proposed setting depth of 718 feet bls for the nominal 10-inch diameter Certa-lok PVC casing will be approximately 18 feet into the carbonate section of the Floridan aquifer. On Tuesday, July 29th, the Contractor will circulate the completed nominal 17-inch diameter for 2-hours before installing the 10-inch diameter Certa-lok PVC well casing to 718 feet bls. Once the 10-inch diameter casing is installed, it will be carefully cemented back to surface with the elevation of the cement within the annulus verified by physical hard tags using a collarless tremie pipe and temperature logs.

If you have any questions or concerns based on the information provided above, please contact the undersigned at 561-684-3375.

Sincerely,

Michael W. Bennett, P.G.
 Senior Hydrogeologist

DAILY REPORT OF CONSTRUCTION

Project Number: 17191.00	Project Name: L63A	Client: SFWMD	Date: 7/25/08	Day of Week: Friday	Contractor: Applied Drilling Engineering (ADE)
Well Name: OKF-106	FDEP Permit #: 0198641-009-UC	Starting Depth: N/A	Ending Depth: N/A'	Bit Size: N/A	Weather: Sunny and Warm

PRIMARY ACTIVITY: Geophysical Logging
RESIDENT OBSERVER/GEOLOGIST: Shamus English
DRILLER: Joe Schmidt

Time	Activity
0700	Shamus English on site. ADE and logging company on site at time of arrival. Setting up for logging activities.
0715	Lowering gamma tool down hole.
0725	Gamma tool on bottom. Recording on the way up. Bottom of tool tagged at 712 ft bls. Gamma sensor is 6 ft from bottom of tool so first reading is taken at 706 ft bls. Gamma log did not pick up clean limestone on bottom. Per Joe S. (ADE) they performed a wiper run yesterday and circulated on bottom from 0930 to 1100.
0755	Gamma tool at surface. He is going to run another gamma log to see if we can pick up the clean limestone on the bottom.
0803	Lowering second gamma tool down hole. Tool also has 16/64 resistivity capability.
0810	Tool on bottom. Recording on the way up at 40 ft/min. sensor on this tool is about 1 foot from bottom. Gamma log picked up a little bit of the clean limestone on bottom this time.
0828	Gamma tool at surface.
0838	Lowering 4-arm caliper tool down hole.
0853	Raising 4-arm caliper tool recording on the way up. Mud is so thick on the bottom that arms did not open fully until started raising tool.
0915	Tool at surface.
0930	Lowering dual induction tool down hole.
0938	Tool on bottom, raising to surface while recording. Cannot view log while recording.
1000	DI tool at surface. Waiting to receive field copies.
1215	Received 3 field copies of logs. Shamus English off site.

DAILY REPORT OF CONSTRUCTION

Project Number: 17191.00	Project Name: L63A	Client: SFWMD	Date: 7/21/08	Day of Week: Monday	Contractor: Applied Drilling Engineering (ADE)
Well Name: OKF-106	FDEP Permit #: 0198641-009-UC	Starting Depth: 597'	Ending Depth: 632'	Bit Size: 12"/17"	Weather: Sunny and Warm

PRIMARY ACTIVITY: 17" Borehole Drilling
RESIDENT OBSERVER/GEOLOGIST: Shamus English
DRILLER: Joe Schmidt

Time	Activity
1455	Shamus English on site. ADE on site and drilling at time of arrival. Depth at 609 ft bls. Next Kelly down will be 629 ft bls. Observed ASR well on site was leaking water from top of well head. ADE has reconfigured drill bit assembly with a 12" diameter bit and a 17" diameter chaser/reamer bit located 30 ft up from 12" penetration bit. This new drill bit assembly will cause cuttings retrieved at surface to be representative of two different depths located 30 ft apart, lithologic descriptions below 630 ft bls will not be completely representative of depth of borehole advancement.
1550	Kelly down at 629 ft bls, circulating on bottom.
1615	Lowering deviation tool down hole.
1640	Deviation survey at 629 ft bls measured 1.0°.
1645	Drilling resumed at 629 ft bls.
1745	Depth at about 631 ft bls.
1815	Drilling halted for the day at 632 ft bls
1830	Shamus English off site.

Recorded By: Shamus English

DAILY REPORT OF CONSTRUCTION

Project Number: 17191.00	Project Name: L63A	Client: SFWMD	Date: 7/22/08	Day of Week: Tuesday	Contractor: Applied Drilling Engineering (ADE)
Well Name: OKF-106	FDEP Permit #: 0198641-009-UC	Starting Depth: 632'	Ending Depth: 649'	Bit Size: 12"/17"	Weather: Sunny and Warm

PRIMARY ACTIVITY: 17" Borehole Drilling
RESIDENT OBSERVER/GEOLOGIST: Shamus English
DRILLER: Joe Schmidt

Time	Activity
0800	Shamus English on site. ADE on site and drilling at time of arrival. Depth at 632 ft bls.
0900	Depth at 634 ft bls
1000	Depth at 636 ft bls
1100	Depth at 637 ft bls
1200	Depth at 639 ft bls
1300	Depth at 640 ft bls
1400	Depth at 642 ft bls
1500	Depth at 644 ft bls
1555	Kelly down at 649 ft bls., circulating on bottom. Rate of penetration increased at 649 ft bls.
1608	Lowering deviation tool down hole.
1635	Deviation survey measured at 1.0°.
1645	Lightning in the area, Joe S. (ADE) to decide whether or not to continue drilling.
1655	Drilling halted for the day. ADE to trip pipe up into casing before securing site. Per Joe S. (ADE), they will get an early start tomorrow in an attempt to TD by the end of the day.
1700	Shamus English off site.

August 4, 2008

Dear Interested Parties:

SUBJECT: Weekly Summary Report No.5 – July 28, 2008 through August 3, 2008
South Florida Water Management District, Upper Floridan Aquifer Monitor Well
OKF-106 (UFA-MW1)
FDEP UIC Well Construction Permit Number 0198641-009-UC

The purpose of this letter is to inform the Florida Department of Environmental Protection (Department) of events that transpired during the fifth week of construction on the upper Floridan aquifer monitor well identified as OKF-106 (UFA-MW1) and those activities anticipated for the next report period.

The construction and related activities that transpired during the fifth week related to OKF-106 (UFA-MW1) are summarized below;

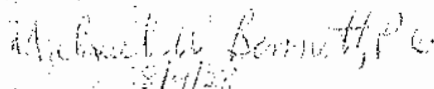

- Reamed the bottom 30 feet of the nominal 12-inch diameter borehole to a depth of 720 feet bls via the mud rotary method.
- Installed the 10-inch diameter Certa-lok PVC well casing to 717 feet bls.
- Cemented the 10-inch diameter Certa-lok PVC well casing to surface in three stages.
- Set up for reverse air drilling
- No drilling or testing activities were conducted on Saturday August 2nd or Sunday August 3rd.

Work scheduled for the next report period:

The Contractor will continue to set up for reverse air drilling. This will include trenching and piping a formation water discharge line from the well head to the on site retention pond. The Contractor will then drill out the cement plug located at the bottom of the 10-inch diameter Certa-lok PVC well casing to 720 ft bls via reverse air drilling. Close attention to the drill cuttings will then be taken, as the nominal 8-inch borehole is further advanced, to select a competent rock interval to obtain the full diameter core which is currently proposed at 730 to 740 ft bls. Once the full diameter core is retrieved, the nominal 8-inch borehole will be advanced to the total well depth of approximately 770 ft bls. To achieve the desired artesian flow of 150 to 200 gpm, borehole advancement to a maximum depth of 800 ft bls may be required.

If you have any questions or concerns based on the information provided above, please contact the undersigned at 561-684-3375.

Sincerely:

Michael W. Bennett, P.G.
Senior Hydrogeologist

DAILY REPORT OF CONSTRUCTION

Project Number: 17191.00	Project Name: L63A	Client: SFWMD	Date: 7/29/08	Day of Week: Tuesday	Contractor: Applied Drilling Engineering (ADE)
Well Name: OKF-106	FDEP Permit #: 0198641-009-UC	Starting Depth: N/A	Ending Depth: N/A'	Bit Size: N/A	Weather: Sunny and Warm

PRIMARY ACTIVITY: Set PVC Casing and First Lift of Cementing
RESIDENT OBSERVER/GEOLOGIST: Shamus English
DRILLER: Joe Schmidt

Time	Activity
0915	Shamus English on site. ADE onsite and tripping drill pipe out of hole at time of arrival. Circulated on bottom for one hour last night and one hour this morning.
0949	Lowering first section of PVC down hole. See casing summary report for details of PVC casing run.
0951	Slip plate slightly too small. ADE to enlarge slip plate slightly.
1001	Slip plate corrected, casing run resumed.
1057	Activities temporarily halted for minor rig maintenance.
1109	Casing run continued.
1203	Attaching header flange. ADE used the one foot section they cut off bottom PVC section and glued flange on it so the header flange could be attached to casing the same way each casing section is connected.
1245	Casing set with approximately three feet of stick up so casing seating depth is approximately 617 feet bls. Shamus English off site
1345	Shamus English on site. ADE tripping down hole with two inch high pressure cement tubing for first cement lift.
1415	ADE mixing approximately 425 gallons (2yds ³) of bentonite slurry to mix with neat cement (4-6% by weight not volume).
1507	Cement tubing set at 693 feet bls. Begin circulating drilling fluids.
1515	Cemex ready-mix cement truck on site with 8 yds ³ neat cement.
1520	Pumping Bentonite slurry mix directly into barrel of cement truck to mix with neat cement.
1525	Filling 500 gallon tank with water to be used during flush. Transferring drilling fluids from circulation tank intl another roll-off tank to allow for displaced fluids during cementing operations.
1536	Pre-flush with 200 gallons of water and begin pumping cement.
1540	Cement density at 12.5 lbs/gal.
1543	Pressure at well head is 8 psi.
1546	Cement density at 13.8 lbs/gal
1548	Pressure at well is 29 psi
1544	Finished pumping cement, density at 14.0 lbs/gal. 180 gallons of water used as displacement.
1547	Finished displacement, closing valve on well head, pressure at 52 psi.
1605	ADE cleaning up. ADE to come back to site in approx. four hours to release pressure and circulate on top of plug.

1615	Shamus English off site.

Recorded By: Shamus English

August 11, 2008

Dear Interested Parties:

SUBJECT: Weekly Summary Report No.6 – August 3, 2008 through August 10, 2008
South Florida Water Management District, Upper Floridan Aquifer Monitor Well
OKF-106 (UFA-MW1)
FDEP UIC Well Construction Permit Number 0198641-009-UC

The purpose of this letter is to inform the Florida Department of Environmental Protection (Department) of events that transpired during the sixth week of construction on the upper Floridan aquifer monitor well identified as OKF-106 (UFA-MW1) and those activities anticipated for the next report period.

The construction and related activities that transpired during the sixth week related to OKF-106 (UFA-MW1) are summarized below;

- Continued to set up for reverse air drilling
- Drilled out the cement plug located at the bottom of the 10-inch diameter Certa-lok PVC well casing to 720 ft bls via reverse air drilling
- Advanced the nominal 8-inch borehole from 720 ft bls to the proposed depth of 730 ft bls in preparation for coring activities.
- No drilling or testing activities were conducted on Friday August 8th, Saturday August 9th or Sunday August 10th.

Work scheduled for the next report period:

Obtain the full diameter core from 730 to 740 ft bls with at least 50% recovery. Once the full diameter core is retrieved, the nominal 8-inch borehole will be advanced to the total well depth of approximately 770 ft bls. To achieve the desired artesian flow of 150 to 200 gpm, borehole advancement to a maximum depth of 800 ft bls may be required. Upon reaching the total depth, the well will be conditioned and geophysical logging will be performed.

If you have any questions or concerns based on the information provided above, please contact the undersigned at 561-684-3375.

Sincerely:

Michael W. Bennett, P.G.
Senior Hydrogeologist

7/1/2008	60	70	Shell Fragments (65%) - Unconsolidated shell fragments and pieces; Quartz Sand (25%)- Unconsolidated, dark yellowish brown (10YR 4/2); Phosphate (5-10%) - approx. 1 mm , sub-rounded to sub-angular
7/1/2008	70	80	Shell Fragments (65%) - Unconsolidated shell fragments and pieces; Quartz Sand (20%)- Unconsolidated, light gray (7)- fine to medium grained; Phosphate (10-15%) - approx. 1-2 mm , sub-rounded to sub-angular
7/1/2008	80	90	Shell Fragments (70%) - Unconsolidated shell fragments and pieces; Quartz Sand (25%)- Unconsolidated, light gray (7)- fine to medium grained; Phosphate (5%) - approx. 1-2 mm , sub-rounded to sub-angular
7/7/2008	90	100	Shell Fragments (70%) - Unconsolidated shell fragments and pieces; Quartz Sand (25%)- Unconsolidated, light gray (7)- fine to medium grained; Phosphate (5%) - approx. 1-2 mm , sub-rounded to sub-angular; Cement pieces evident in sample
7/7/2008	100	110	Shell Fragments (70%) - Unconsolidated shell fragments and pieces; Quartz Sand (25%)- Unconsolidated, light gray (7)- fine to medium grained; Phosphate (5%) - fine grained to approx. 1-2 mm , sub-rounded to sub-angular; Cement pieces evident in sample
7/7/2008	110	120	Shell Fragments (60%) - Unconsolidated shell fragments and pieces; Quartz Sand (25%)- Unconsolidated, light gray (7)- fine to medium grained; Silt (10%); Phosphate (5%) - fine grained to approx. 1 mm , sub-rounded to sub-angular
7/8/2008	120	130	Shell Fragments (60%) - Unconsolidated shell fragments and pieces; Quartz Sand (25%)- Unconsolidated, light gray (7)- fine to medium grained; Silt (10%); Phosphate (5%) - fine grained to approx. 1 mm , sub-rounded to sub-angular

August 19, 2008

Dear Interested Parties:

SUBJECT: Weekly Summary Report No.7 -- August 11, 2008 through August 17, 2008
South Florida Water Management District, Upper Floridan Aquifer Monitor Well
OKF-106 (UFA-MW1)
FDEP UIC Well Construction Permit Number 0198641-009-UC

The purpose of this letter is to inform the Florida Department of Environmental Protection (Department) of events that transpired during the seventh week of construction on the upper Floridan aquifer monitor well identified as OKF-106 (UFA-MW1) and those activities anticipated for the next report period.

The construction and related activities that transpired during the seventh week related to OKF-106 (UFA-MW1) are summarized below:

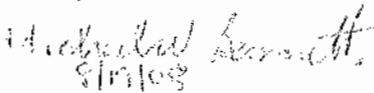

- Obtained the full diameter core from 730 to 740 ft bls with 80% recovery
- Advanced a nominal 8-inch borehole to the total well depth of 800 ft bls.
- Cleaned up site for demobilization.
- No drilling or testing activities were conducted on Saturday August 16th or Sunday August 17th.

Work scheduled for the next report period:

Due to tropical storm event, activities may be postponed until later in the week. The Contractors will continue to clean up site and restore to conditions prior to drilling activities, begin to construct the well head, and conduct pump test with flow rates to be determined.

If you have any questions or concerns based on the information provided above, please contact the undersigned at 561-684-3375.

Sincerely:

Michael W. Bennett, P.G.
Senior Hydrogeologist

DAILY REPORT OF CONSTRUCTION

Project Number: 17191.00	Project Name: L63N	Client: SFWMD	Date: 8/12/08	Day of Week: Tuesday	Contractor: Applied Drilling Engineering (ADE)
Well Name: OKF-106	FDEP Permit #: 0198641-009-UC	Starting Depth: N/A	Ending Depth: N/A	Bit Size: N/A	Weather: Sunny and Warm

PRIMARY ACTIVITY: Core Interval 730-740 ft bls
RESIDENT OBSERVER/GEOLOGIST: Shamus English
DRILLER: Joe Schmidt

Time	Activity
1400	Shamus English on site. ADE on site and setting up for coring at time of arrival. Core barrel is on bottom, Christianson saw bit. 6" barrel cuts 4" core.
1424	Commenced coring at 730 ft bls.
1435	At 740 ft bls, finished coring. ADE disconnecting Kelly from drill pipe.
1444	ADE tripping pipe to surface.
1605	Core barrel at surface, retrieval of core temporarily halted due to rain event.
1619	Retrieval of core resumed.
1655	Recovered 80% of core interval, mostly rubble with two sections that are 7.5 inches.
1730	Shamus English off site. Marked depths on core box. Due to heavy rain, core will be described tomorrow.

Recorded By: Shamus English

DAILY REPORT OF CONSTRUCTION

Project Number: 17191.00	Project Name: L63N	Client: SFWMD	Date: 8/13/08	Day of Week: Wednesday	Contractor: Applied Drilling Engineering (ADE)
Well Name: OKF-106	FDEP Permit #: 0198641-009-UC	Starting Depth: 730'	Ending Depth: 800'	Bit Size: 8"	Weather: Sunny and Warm

PRIMARY ACTIVITY: Advance Borehole to 800 ft bls
RESIDENT OBSERVER/GEOLOGIST: Shamus English
DRILLER: Joe Schmidt

Time	Activity
0915	Shamus English on site. ADE on site and drilling at time of arrival. Depth at about 755 ft bls. Artesian flow rate at 740 ft bls was 80 gpm. WQ at 740 ft bls. pH - 7.69 S.U., Temp - 30.1 °C, Cond. - 2,680 μS, TDS - 1,340 ppm.
0922	Kelly down at 760 ft bls, circulating on bottom. WQ at 760 ft bls. pH - 8.15 S.U., Temp - 28.7°C, Cond. - 2,700 μS, TDS - 1,350 ppm. Artesian flow at 760 ft bls ~ 92 gpm
1006	Drilling resumed at 760 ft bls, will stop at 770 ft bls to check flow rate.
1017	Drilling halted at 770 ft bls to get flow rate.
1030	WQ at 770 ft bls. pH - 7.62 S.U., Temp - 27.1°C, Cond. - 2,710 μS, TDS - 1,360 ppm. Artesian flow at 760 ft bls ~ 92 gpm
1035	Drilling resumed at 770 ft bls
1047	Kelly down at 780 ft bls, circulating on bottom.
1100	WQ at 780 ft bls. pH - 8.07 S.U., Temp - 27.1°C, Cond. - 2,720 μS, TDS - 1,360 ppm. Artesian flow at 780 ft bls ~ 95 gpm
1105	Drilling resumed at 780 ft bls.
1135	Kelly down at 800 ft bls.
1150	WQ at 800 ft bls. pH - 8.16 S.U., Temp - 27.0°C, Cond. - 2,700 μS, TDS - 1,360 ppm. Artesian flow at 800 ft bls ~ 100 gpm
1215	Shamus English off site. After lunch ADE will circulate on bottom for approx. two hours before tripping out of hole.

August 25, 2008

Dear Interested Parties:

SUBJECT: Weekly Summary Report No.8 – August 18, 2008 through August 24, 2008
 South Florida Water Management District, Upper Floridan Aquifer Monitor Well
 OKF-106 (UFA-MW1)
 FDEP UIC Well Construction Permit Number 0198641-009-UC

The purpose of this letter is to inform the Florida Department of Environmental Protection (Department) of events that transpired during the eighth week of construction on the upper Floridan aquifer monitor well identified as OKF-106 (UFA-MW1) and those activities anticipated for the next report period.

The construction and related activities that transpired during the eighth week related to OKF-106 (UFA-MW1) are summarized below;

- Completed well head, well pad, & surface facilities and met substantial completion component of the contract with the SFWMD on Thursday, August 21, 2008.
- Continued demobilization and site restoration.
- No drilling or testing activities were conducted on Monday August 18th, Tuesday August 19th, Saturday August 23rd or Sunday August 24th.

Work scheduled for the next report period:

The Contractors will develop the well while monitoring the sand content via a Rosem Sand Tester. Upon reaching the desired sand content of less than 5 mg/L after a hour period, the Contractor will set up for and conduct step test (4 steps) and an 8-hour drawdown test. Water quality samples will be collected for major cation and anion analysis along with primary and secondary drinking water criteria analysis. The Contractor will also continue to perform demobilization and site restoration.

If you have any questions or concerns based on the information provided above, please contact the undersigned at 561-684-3375.

Sincerely:

Michael W. Bennett, P.G.
 Senior Hydrogeologist
 Boyle/AECOM

September 11, 2008

Dear Interested Parties:

SUBJECT: Weekly Summary Report No.9 – August 25, 2008 through August 31, 2008
 South Florida Water Management District, Upper Floridan Aquifer Monitor Well
 OKF-106 (UFA-MW1)
 FDEP UIC Well Construction Permit Number 0198641-009-UC

The purpose of this letter is to inform the Florida Department of Environmental Protection (Department) of events that transpired during the ninth week of construction on the upper Floridan aquifer monitor well identified as OKF-106 (UFA-MW1) and those activities anticipated for the next report period.

The construction and related activities that transpired during the ninth week related to OKF-106 (UFA-MW1) are summarized below;

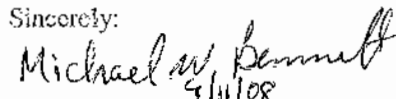

- Completed well development.
- Conducted step test at 173 gpm, 307 gpm, and 400 gpm.
- Conducted 8-Hour drawdown test at 414 gpm.
- Collected water samples for major cation/anion and primary/secondary drinking water standard laboratory analysis
- No drilling or testing activities were conducted Saturday August 30th or Sunday August 31st.

Work scheduled for the next report period:

The Contractor will arrange for a geophysical logging company to perform a video survey and geophysical logging as specified in the technical plans and specifications. The Contractor will also continue to perform demobilization and site restoration.

If you have any questions or concerns based on the information provided above, please contact the undersigned at 561-684-3375.

Sincerely:

 Michael W. Bennett, P.E.
 Senior Hydrogeologist

September 11, 2008

Dear Interested Parties:

SUBJECT: Weekly Summary Report No.10 – September 1, 2008 through September 7, 2008
South Florida Water Management District, Upper Floridan Aquifer Monitor Well
OKF-106 (UFA-MW1)
FDEP UIC Well Construction Permit Number 0198641-009-UC

The purpose of this letter is to inform the Florida Department of Environmental Protection (Department) of events that transpired during the tenth week of construction on the upper Floridan aquifer monitor well identified as OKF-106 (UFA-MW1) and those activities anticipated for the next report period.

The construction and related activities that transpired during the tenth week related to OKF-106 (UFA-MW1) are summarized below;

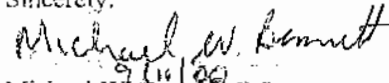

- Conducted geophysical logging. However, an obstruction was observed just below the bottom of the casing and the video tool could not travel to bottom of borehole.
- Mobilized drill rig to site and drilled out obstruction in borehole observed during geophysical logging activities.
- No drilling or testing activities were conducted Saturday September 6th or Sunday September 7th.

Work scheduled for the next report period:

The Contractor will arrange for a geophysical logging company to finish the video survey and geophysical logging as specified in the technical plans and specifications. The Contractor will also continue to perform demobilization and site restoration.

If you have any questions or concerns based on the information provided above, please contact the undersigned at 561-684-3375.

[2031953]

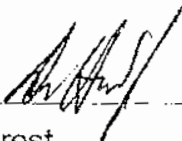

Dear Shamus English;

Analytical results presented in this report have been reviewed for compliance with the HBEL, Inc. Quality Systems Manual and have been determined to meet applicable Method guidelines and Standards referenced in the July 2003 National Environmental Laboratory Accreditation Program (NELAP) Quality Manual unless otherwise noted. The Analytical Results within these report pages reflect the values obtained from tests performed on Samples As Received by the laboratory unless indicated differently.

FDOH Safe Drinking Water Act, Clean Water Act and RCRA Certification #'s:
E96080, E83509

Questions regarding this report should be directed to the Report Signatory at (772) 465-8584 referencing the HBEL Workorder ID [Number].

Respectfully submitted,

Eric Charest
HBEL, Inc. Laboratory Manager

7/23/2008	650	660	*Clay (60%) - pale olive (10Y 6/2), well to moderate cohesion; Limestone (30%) - white (N9) to very pale orange (10 YR 8/2), moderately to poorly indurated; Phosphate (10%) - medium to fine grained
7/23/2008	660	670	*Clay (60%) - pale olive (10Y 6/2), well to moderate cohesion; Limestone (35%) - white (N9) to very pale orange (10 YR 8/2), moderately to poorly indurated; Phosphate (5%) - medium to fine grained
7/23/2008	670	680	*Clay (70%) - pale olive (10Y 6/2), well to moderate cohesion; Limestone (25%) - white (N9) to very pale orange (10 YR 8/2), moderately to poorly indurated; Phosphate (5%) - medium to fine grained
7/23/2008	680	690	*Limestone (55%) - white (N9) to very pale orange (10 YR 8/2), poorly indurated, chalky; Clay (30%) - yellowish gray (5Y 7/2), well to moderate cohesion; Phosphate (15%) - fine grained to 3mm
7/23/2008	690	700	*Limestone (70%) - white (N9) to very pale orange (10 YR 8/2), poorly indurated, chalky; Clay (20%) - yellowish gray (5Y 7/2), well to moderate cohesion; Phosphate (10%) - fine grained to 3mm
7/23/2008	700	710	*Limestone (70%) - white (N9) to very pale orange (10 YR 8/2), poorly indurated, chalky; Clay (20%) - yellowish gray (5Y 7/2), well to moderate cohesion; Phosphate (10%) - fine grained to 3mm

Date	Depth (ft. bls)		Observer's Description
	From	To	
7/23/2008	710	720	*Limestone - white (N9) to very pale orange (10 YR 8/2), poorly indurated, chalky.
8/7/2008	720	730	Limestone - Very pale orange (10 YR 8/2), moderately indurated, calcarenitic, low intergranular macroporosity, <i>lepidocyclina sp.</i> present, turritlella and other shells pieces and fragments evident
8/13/2008	730	740	Limestone - Very pale orange (10 YR 8/2) to light gray (N8), moderately to poorly indurated, calcarenitic, moderate macroporosity (mostly moldic and intergranular), <i>lepidocyclina sp.</i> present, abundant shell pieces and fragments
8/13/2008	740	750	Limestone - Very pale orange (10 YR 8/2), poorly indurated, calcarenitic, highly friable, abundant <i>lepidocyclina sp.</i> present.
8/13/2008	750	760	Limestone - Very pale orange (10 YR 8/2), poorly indurated, calcarenitic, highly friable, abundant <i>lepidocyclina sp.</i> present.
8/13/2008	760	770	Limestone - Very pale orange (10 YR 8/2), poorly indurated, calcarenitic, highly friable, abundant <i>lepidocyclina sp.</i> present.
8/13/2008	770	780	Limestone - Very pale orange (10 YR 8/2), poorly indurated, calcarenitic, highly friable, abundant <i>lepidocyclina sp.</i> present.
8/13/2008	780	790	Limestone - Very pale orange (10 YR 8/2), moderately to poorly indurated, calcarenitic, moderately friable, abundant <i>lepidocyclina sp.</i> present.
8/13/2008	790	800	Limestone - Very pale orange (10 YR 8/2), poorly indurated, calcarenitic, highly friable, abundant <i>lepidocyclina sp.</i> present.

*Due to drill bit configuration, lithologic sample collected may not be completely representative of noted depth interval.

Subject:

Core Description and Petrography (Thin Section Description and X-Ray Diffraction) of Conventional Core from:

South Florida Water Management District

L63N Canal Core
Okeechobee Co., Florida

Objectives:

- 1) Provide a macroscopic description of the core.**
- 2) Describe the petrographic characteristics (fabric, texture, composition, types and distribution of porosity) of the rock.**

Introduction

An approximately 7-inch long piece of conventional core was submitted to Core Laboratories - Reservoir Geology for description and petrographic analysis (thin section description and x-ray diffraction). The client indicated the core was from the Middle Eocene, Ocala Formation. The core section was slabbed, photographed and described. A single thin section (1.5" X 3", blue epoxy impregnated, dual carbonate stain) was made from near the top part of the core and a sample was taken adjacent to the thin section sample for XRD analysis.

Core Description

Figure 1. Core Photo

The rock is predominantly friable, light beige to tan, highly porous limestone. The figure shown above (also enlarged in Plate 1) illustrates the general character of the core. Left of the red line (indicated by 'G') the rock is predominantly a grainstone. Right of the red line (indicated by 'P') the rock is primarily a packstone. The large feature indicated by 'E' is interpreted to be a matrix-filled mold of an echinoid (sea urchin). The macropores seen at this scale are predominantly interparticle and moldic (shapes of most of the moldic pores indicate they are likely pores created by the dissolution of mollusk (bivalve) and other shell fragments. Large orbitoid foraminifers (*Lepidocyclina* sp. - e.g. Figure 2) are most abundant and are typically about 10 millimeters in diameter. Other macrofossils (gastropods, bivalves - e.g. Figure 3, bryozoans) are much less common.

Figure 2. *Lepidocyclina* sp.
(diameter of test is 7 millimeters)

Figure 3. Bivalve
(long dimension of shell is 7 millimeters)

Petrography

Samples chosen for thin section and XRD analysis were taken from near the top of the core section (left side of Figure 1, grainstone portion of the rock). XRD data (Table 1) indicates the rock is 100% calcite. Petrographic data indicates this part of the

Table 1.

Sample Information		Whole Rock Mineralogy (Weight %)								Relative Clay Abundance (Normalized to 100%)				
Sample #	Depth	Quartz	K-Feldspar	Plagioclase	Calcite	Dolomite	Siderite	Pyrite	Total Clay	Smectite	Illite / Smectite	Illite & Mica	Kaolinite	Chlorite
1	Unknown	Tr	0	0	100	0	0	0	0	0	0	0	0	0

Tr=Trace (<0.5%)

rock is a bioclastic grainstone (Plate 2, Photo A). The allochems are intraclasts and various types of bioclasts. The larger bioclasts seen in the thin sections include pieces of gastropods, mollusk shell fragments (typically bored, e.g. Plate 2, Photo B), and orbitoid foraminifera tests (e.g. Plate 1, Photo A). The smaller grains include pieces of mollusk shells, echinoid spines, bryozoans, coralline algae, codiacean algae, and several kinds of foraminifera (biserial, miliolids, orbitoid fragments). Non-skeletal clasts are predominantly intraclasts (e.g. Plate 2, Photo A). The typical size of the smaller grains (bioclasts and non-skeletal) is about 0.209 millimeter (fine sand size on Wentworth scale). Almost all of the grains have a micrite rim and a subsequent coating

of isopachous/fringing cement (e.g. Plate 3, Photo A). The isopachous/fringing cement coats the exterior surface of the grains and also chambers and voids in bioclasts such as miliolid foraminifer tests (e.g. Plate 3, Photo C). Small amounts of sparry calcite cement occur throughout the thin section. It typically occurs as an interparticle cement, often attached to larger bioclasts (e.g. Plate 2, Photos B and C). The sparry calcite cement also occurs as cement filling chambers in some of the foraminifer tests (e.g. Plate 3, Photo C).

Visually estimated porosity of the thin section is about 30-35%. Pore-types include moldic, intraparticle, and interparticle. The moldic pores are typically the largest pores and appear to be the result of the dissolution of mollusk shell fragments (Plate 2, Photo A). Moldic pores also result from the near-complete dissolution of grains, where only a micrite rim or isopachous cement remains to indicate the previous existence of a grain. Intraparticle porosity includes un-cemented chambers in foraminifer tests, pores in other bioclasts, and partially dissolved intraclasts (e.g. Plate 3, Photo A). Interparticle pores (e.g. Plate 3, Photo B) are the most abundant pore-type in this rock and account for about 2/3 of the total porosity.

Reference List

Scholle, P.A., Ulmer-Scholle, D.S., 2003, ***A Color Guide to the Petrography of Carbonate Rocks: Grains, textures, porosity, diagenesis***; American Association of Petroleum Geologists Memoir 77, 474p.

Thank you for this opportunity to be of service. If you have any questions, or if we can be of further assistance, please feel free to give us a call. One copy of this report was delivered to Mr. Clayton McMillan (South Florida Water Management District, West Palm Beach, Florida). The remainder of the core and the thin section were returned to returned to the client, along with the final report.

Barry E. Wawak
Senior Geologist
Reservoir Geology
Core Laboratories

These analyses, opinions or interpretations are based on observations and materials supplied by the client to whom, and for whose exclusive and confidential report is made. Core Photo

Approximately 7-inches of conventional core was available for description. The core has a light tan to beige color and is friable. The upper half of the core (above the red line) has a grainstone texture. This part of the core consists of macrofossils, broken pieces of fossil shells and clasts, with very little matrix. Macrofossils include large orbitoid foraminifera (*Lepidocyclina* sp.), gastropods, and bryozoans. A photo of a *Lepidocyclina* sp. test is shown in the inset photo. The diameter of the foraminifer test is 7 millimeters. A large clast-like feature near the base of the grainstone-interval appears to be an echinoid (sea urchin) mold that is filled with micrite. Moldic pores and interparticle pores are the dominant pore types in this part of the core. The lower half of the core (below the red line) has a packstone texture which reflects elevated amounts of micrite in this part of the core. This is indicated by a marked reduction of open macro-pores. The identifiable macrofossil content of this part of the core is similar to the upper part. Moldic pores are more abundant than interparticle pores in this part of the core.

Thin Section Scan and Photomicrographs

The thin section was made from the grainstone part of the core. The thin sections also contains scattered, small areas of microcrystalline micrite matrix (not indicated in photomicrographs). Photo A is a scan of the thin section that shows the texture of the rock and the distribution of the larger skeletal grains. Note occurrence of large orbitoid foraminifer tests (yellow arrows) and a gastropod cross section (red arrow). Note also the occurrence of moldic pores that appear to be the result of dissolution of bivalve shell fragments (green arrows). The higher magnification photos show the details of the predominant allochems, most of which have micrite coats and isopachous rim cement. The average size of these smaller grains is about 0.209 millimeters (fine sand size - Wentworth scale). The variety of grains include intraclasts, rare ooids/coated grains and numerous bioclasts. Identifiable bioclasts include fragments of coralline algae, codiacean algae (lower left corner, Photo B), echinoderm spines, mollusk shell fragments (often bored, e.g. M, Photo B), bryozoan fragments, and several different kinds of foraminifer (biserial, miliolids, as well as fragments of the much larger orbitoids). Sparry calcite cement is relatively rare, but is typically seen attached to some of the larger mollusk shell fragments (blue arrows, Photos B and C). Photo B is a good example of an area of the thin sections where the macroporosity consists predominantly of interparticle pores.

Thin Section Photomicrographs

These are higher magnification photomicrographs showing some of the small-scale petrographic features of the rock. Sparry calcite cement is rare in the thin section. It occurs as scattered interparticle cement ('C', Photo A) and occasionally fill voids in some of the larger bioclasts (lower right, Photo C, where the calcite cement fills chambers in a miliolid foraminifer test). Ooids/coated grains ('O', Photo B) are rare in the thin section. Most of the micrite clasts show varying degrees of dissolution that create intraparticle pore space ('CI', Photo A). Almost all of the grains have 1) a micrite rim, probably caused by algal boring, and 2) and isopachous rim cement coating the micrite rim (e.g. yellow arrow, Photo A). Photo B shows the two predominant types of macropores; 1) intraparticle pores (IP - Photo B, uncemented chambers in a foraminifer test), and 2) interparticle pores (ItP - Photo B), occurring between the allochems/bioclasts.

A. (PPL) scale = 0.200 mm

B. (PPL) scale = 0.200 mm

C. (PPL) scale = 0.200 mm

8 Hour Drawdown Test
File Name 2008-08-27 08-14-11.wsl
Create Date 8/28/2008 9:04
Device Properties
Device Level TROLL® 700
Site L63N (OKF-106)
Device Name
Serial Number 134613
Firmware Version 2.07

Log Configuration

Log Name	8 Hour Drawdown Test
Created By	SEnglish
Computer Name	USPCT1LT011
Application	WinSitu.exe
Application Version	5.6.1.8
Create Date	8/27/2008 7:25
Notes Size(bytes)	4096
Type	True Logarithmic
Overwrite when full	Disabled
Scheduled Start Time	Manual Start
Scheduled Stop	No Stop Time
Max Interval	Days: 0 Hours: 00 Mins: 02 Secs: 00

Level Reference Settings At Log Creation	Level Measurement Mode	Level Depth To Water
	Specific Gravity	0.999
	Level Reference Mode:	Set new reference
	Level Reference Value:	0 (ft)
	Level Reference Head	
	Pressure	46.9423 (PSI)
	Head Pressure	46.9484 (PSI)
	Temperature	25.889 (C)
	Depth of Probe	108.402 (ft)

Log Notes:

8-HOUR DRAWDOWN RECOVERY TEST

Report Date: 9/15/2008 15:49
Report User Name: Owner
Report Computer Name: OWNER-PC
Log File Properties

8 Hour DD Recovery 2008-
File Name 08-28 09-06-29.wsl
Create Date 8/28/2008 9:06

Device Properties
Device Level TROLL® 700
Site L63N (OKF-106)

Device Name
Serial Number 134613
Firmware Version 2.07

Log Configuration
Log Name 8 Hour DD Recovery
Created By SEnglish
Computer Name USPCT1LT011
Application WinSitu.exe
Application Version 5.6.1.8
Create Date 8/27/2008 15:31
Notes Size (bytes) 4096
Type True Logarithmic
Overwrite when full Disabled
Scheduled Start Time Manual Start
Scheduled Stop No Stop Time
Max Interval Days: 0 Hours: 00
Mins: 02 Secs: 00

Level Reference Settings At Log Creation
Level Measurement Mode Level Depth To Water
Specific Gravity 0.999
Level Reference Mode: Set new reference
Level Reference Value: 0 (ft)
Level Reference Head
Pressure 18.3326 (PSI)
Head Pressure 18.3307 (PSI)
Temperature 26.147 (C)
Depth of Probe 42.3251 (ft)

Log Notes:
Date and Time Note
8/27/2008 15:32 Manual Start Command
8/28/2008 9:03 Manual Stop Command

Log Data:
Record Count 634
Sensor: Pres 100G SN#: 134613

Dear Shamus English;

Analytical results presented in this report have been reviewed for compliance with the HBEL, Inc. Quality Systems Manual and have been determined to meet applicable Method guidelines and Standards referenced in the July 2003 National Environmental Laboratory Accreditation Program (NELAP) Quality Manual unless otherwise noted. The Analytical Results within these report pages reflect the values obtained from tests performed on Samples As Received by the laboratory unless indicated differently.

FDOH Safe Drinking Water Act, Clean Water Act and RCRA Certification #'s:
E96080, E83509

Questions regarding this report should be directed to the Report Signatory at (772) 465-8584 referencing the HBEL Workorder ID [Number].

Respectfully submitted,

Eric Charest
HBEL, Inc. Laboratory Manager

Dear Shamus English;

Analytical results presented in this report have been reviewed for compliance with the HBEL, Inc. Quality Systems Manual and have been determined to meet applicable Method guidelines and Standards referenced in the July 2003 National Environmental Laboratory Accreditation Program (NELAP) Quality Manual unless otherwise noted. The Analytical Results within these report pages reflect the values obtained from tests performed on Samples As Received by the laboratory unless indicated differently.

FDOH Safe Drinking Water Act, Clean Water Act and RCRA Certification #'s:
E96080, E83509

Questions regarding this report should be directed to the Report Signatory at (772) 465-8584 referencing the HBEL Workorder ID [Number].

Respectfully submitted,

Eric Charest
HBEL, Inc. Laboratory Manager

Dear Shamus English;

Analytical results presented in this report have been reviewed for compliance with the HBEL, Inc. Quality Systems Manual and have been determined to meet applicable Method guidelines and Standards referenced in the July 2003 National Environmental Laboratory Accreditation Program (NELAP) Quality Manual unless otherwise noted. The Analytical Results within these report pages reflect the values obtained from tests performed on Samples As Received by the laboratory unless indicated differently.

FDOH Safe Drinking Water Act, Clean Water Act and RCRA Certification #'s:
E96080, E83509

Questions regarding this report should be directed to the Report Signatory at (772) 465-8584 referencing the HBEL Workorder ID [Number].

Respectfully submitted,

Eric Charest
HBEL, Inc. Laboratory Manager

* Combined Limit

*** If the results exceed 5 pCi/L, a measurement for radium-226 is required.

If the results exceed 15 pCi/L, measurements for radium-226 and uranium are required.

* Qualifiers:

U1 Analyte was not detected; indicated concentration is method detection limit. Radiochemistry MDL is sample specific and matrix dependent.
