1.0 EXECUTIVE SUMMARY

The Picayune Strand Restoration Project (PSRP), a component of the Comprehensive Everglades Restoration Plan (CERP) is currently under construction north of the proposed water quality feasibility study area discussed in this report. The PSRP is expected to increase flows from north of US 41 to Outstanding Florida Waters (OFWs) within Collier-Seminole State Park, Rookery Bay Estuarine Research Reserve, and the Ten Thousand Islands National Wildlife Refuge. These areas will also continue to receive existing surface water flows from other portions of the greater Picayune Watershed, including Belle Meade and agricultural and urban areas north of US 41 and west of the general focus area of this study. While the new flows to be discharged south of US 41 are expected to have lower nutrient concentrations than existing flows, the overall flows are projected to increase.

Prior to this study, Stantec completed the Picayune Watershed Water Quality Feasibility Study (WQFS), dated March 2, 2021. The WQFS was prepared in coordination with stakeholder groups and the public to identify existing water quality treatment technologies that could be applied either singularly or in tandem to improve the water quality being received by downstream properties. Each option identified contained varying characteristics, but each was scalable and allowed for implementation on a range of parcel sizes; however, there are few upland areas south of US 41 and upstream of the OFWs, significantly limiting treatment location opportunities. Several of these upland areas included State-owned, agriculturally zoned, and other privately owned parcels further west. During the WQFS, Stantec and the District coordinated with several public agencies, private companies, and individual property owners to help inform the study.

The purpose of the Picayune Watershed Water Quality Site Analysis (WQSA) is to identify candidate parcels or parcel areas that could serve to host one or more of the water quality projects identified in the WQFS. This process began with identifying an overall study area containing 1,935 parcels and progressing through several iterations of exclusionary criteria. Each exclusion removed parcels from consideration, further narrowing the list of remaining candidate parcels and parcel areas to ten individual parcels or parcel areas. Evaluative criteria were then applied to the remaining candidates resulting in five parcel/parcel areas for further evaluation. These five parcel/parcel areas and the Preliminary Draft Report (including the report and supporting information through the Preliminary Evaluative Criteria) were presented to the Technical Working Group (TWG) on December 17th, 2021. Information and feedback provided by the TWG resulted in further analysis of relevant documents and as such, resulted in a revised assessment and ranking of candidate parcels. **Section 6.1.6** includes a description of this additional analysis and the updated ranking.

Once the final five candidate parcel/parcel areas were identified and ranked, Stantec initiated a further evaluation of each candidate parcel / parcel area, including contacting property owners to obtain access for evaluative purposes and to determine their willingness to participate. Stantec then performed site walks to better understand the ecological factors and developed schematic designs to further evaluate capital costs and mass removal rates for nitrogen and phosphorous for projects located on each of the five parcel or parcel group areas. This information was used to develop a Final Parcel Ranking shown in **Section 6.2.4**.

2.0 BACKGROUND & PURPOSE

BACKGROUND

On January 10, 2019, Governor Ron DeSantis signed Executive Order 19-12, calling for greater protection of Florida's environment and water quality. The Executive Order directed the state agencies to take a more aggressive approach to address some of the environmental issues plaguing the state, with a significant emphasis on south Florida and water quality. The **Picayune Strand Restoration Project (PSRP)** is currently under construction north of the proposed water quality feasibility study area. PSRP will increase discharges to **Outstanding Florida Waters (OFW)** within Collier-Seminole State Park, Rookery Bay Estuarine Research Reserve, and the Cape Romano – Ten Thousand Islands Aquatic Preserve. Additionally, the Ten Thousand Islands regions have been assigned estuary specific Numeric Nutrient Criteria by the Florida Department of Environmental Protection.

The PSRP is a part of the **Comprehensive Everglades Restoration Plan (CERP)** project. The objective of the PSRP is to restore the hydrological and ecological function of nearly 55,247 acres (approximately 94 square miles) of a previously drained wetland located in Southwestern Collier County. The PSRP consists of the construction of a series of pump stations, tie-back levees, spreader berms and canal plugs to slow water flowing through existing canals and redistribute it across the landscape. In addition, the project includes a protection feature (levee) designed to provide flood protection to the southwestern agricultural and residential areas. Implementation of this project will increase discharges to downstream OFW within Collier-Seminole State Park and the Cape Romano – Ten Thousand Islands Aquatic Preserve through existing and proposed culverts under US 41.

Stantec completed the **Picayune Watershed Water Quality Feasibility Study (WQFS)**, dated March 2, 2021. The WQFS was prepared in coordination with the public and stakeholder groups and served to identify existing water quality treatment options that could be applied either singularly or in tandem and serve to improve the water quality being received by downstream properties. This included conventional and innovative water treatment resources, stormwater redistribution, and active or passive water quality improvement projects. Treatment technologies included Treatment Wetlands, Spreader Berms and Canals, Sedimentation Basins and Polishing Ponds, and Biofilters. Each option identified and evaluated, contained varying characteristics, but each was scalable, allowing for implementation on a range of parcel sizes. Options were also considered based on overall Water Quality, Water Quantity – existing vs. future flows, Land Availability, Technology, Permitting and Funding Opportunities.

PURPOSE

The purpose of this study, the **Picayune Watershed Water Quality Site Analysis (WQSA)** is to identify candidate parcels or parcel areas within the WQSA limits (**Section 4.0**) based on location, size and availability that are suitable for the proposed project(s). It is possible that more than one site may be identified for implementation at which time a ranking of parcels based on identified evaluative criteria will be applied to provide a ranked recommendation.

Technical Working Group

The **Technical Working Group (TWG)** was comprised of individuals and agency representatives similar to those who participated in the WQFS and are identified in **Table 2-1**. For the WQSA, the primary role for the TWG is to provide references to related information that may help inform the analysis, review, and offer input on the iterations of the report, and provide input on the candidate parcel and parcel area ranking. The TWG was provided the opportunity to provide input beginning with the presentation and submission of the Preliminary Draft Report on December 17th, 2021, and the subsequent Draft Report completed on June 3rd. Feedback received from the TWG has been critical to the development of this Report.

3.0 METHODOLOGY

The initial study area of parcels was intentionally broadened beyond what may be considered an effective area to ensure thorough consideration of all available parcel options. This area (shown in **Figure 4-2**) contained 1,935 parcels for review. Parcel areas are defined as a group of adjoining parcels initially identified as unsuitable for a project implementation, due to individual physical limitation(s), that become suitable once combined with adjacent parcels. For the purpose of this report, these parcel areas are reviewed as one parcel. Parcel information was collected, for all parcels, from the Collier County Property Appraiser's database and mapped geospatially. This study applied a cumulative methodology based on physical characteristics collected from the Property Appraiser's database, aerial imagery, as well as several publicly available GIS map layers to assist in evaluating all parcels within the study area.

The applied methodology also included the development of initial exclusionary criteria established with the assistance of **Big Cypress Basin (Basin)** and **Collier County (County)** staff to narrow the analysis to a 'short list' of viable parcels or parcel areas best suited to meet the objectives identified in the WQFS. The initial exclusionary criteria established are identified in **Section 5.1**. Once the initial set of exclusionary criteria were applied, additional exclusionary criteria, identified in **Section 5.2**, were developed, and resulted in further narrowing of the remaining parcels and parcel areas to be evaluated.

Following the application of the two-step exclusionary criteria phase, the remaining parcels were subjected to a list of preliminary evaluative criteria, allowing for a preliminary ranking of parcels. These evaluative criteria were established with the assistance of the Basin and Collier County and are identified in **Section 6.1**.

The remaining sites identified as being most suitable to meet the project objectives were reviewed by consultant team members familiar with zoning and land use law, using available public documents to determine if a prohibition by local, state, federal law, covenants, or restrictions precluded the parcel or parcel area with regard to the proposed use. Any parcels not suitable for the proposed land uses have been removed from further consideration. Title searches have also been conducted by a Florida licensed attorney for each of these sites to understand future title transferability and consistency with listed deed restrictions in accordance with property and sales records (**Section 6.1.4**).

Based on the above and the resulting preliminary ranking, five parcels or parcel areas were then identified for a more in-depth analysis to determine the viability of each parcel in meeting the project goals, listed in **Section 6.1.5**. As part of the Preliminary Draft Report, the progress to this point was presented to the Technical Working Group (TWG) on December 17th, 2021. Information and feedback provided by the TWG resulted in further analysis of relevant documents and as such, resulted in a revised assessment and ranking of candidate parcels. **Section 6.1.6** includes an additional analysis and updated ranking for the five parcel or parcel areas was subjected to further evaluation and analysis.

Following the preliminary evaluation and ranking of parcels, each parcel was then evaluated based on a set of secondary evaluative criteria as outlined in **Section 6.2.1**. This evaluation was informed through activities including contacting property owners to obtain access and determine their willingness to

participate in selling or conveying property, performing site walks where possible to better understand current ecological factors, and developing schematic designs to evaluate capital costs and water quality benefits (namely mass removal rates for nitrogen and phosphorous based upon preliminary calculations for performance expectations).

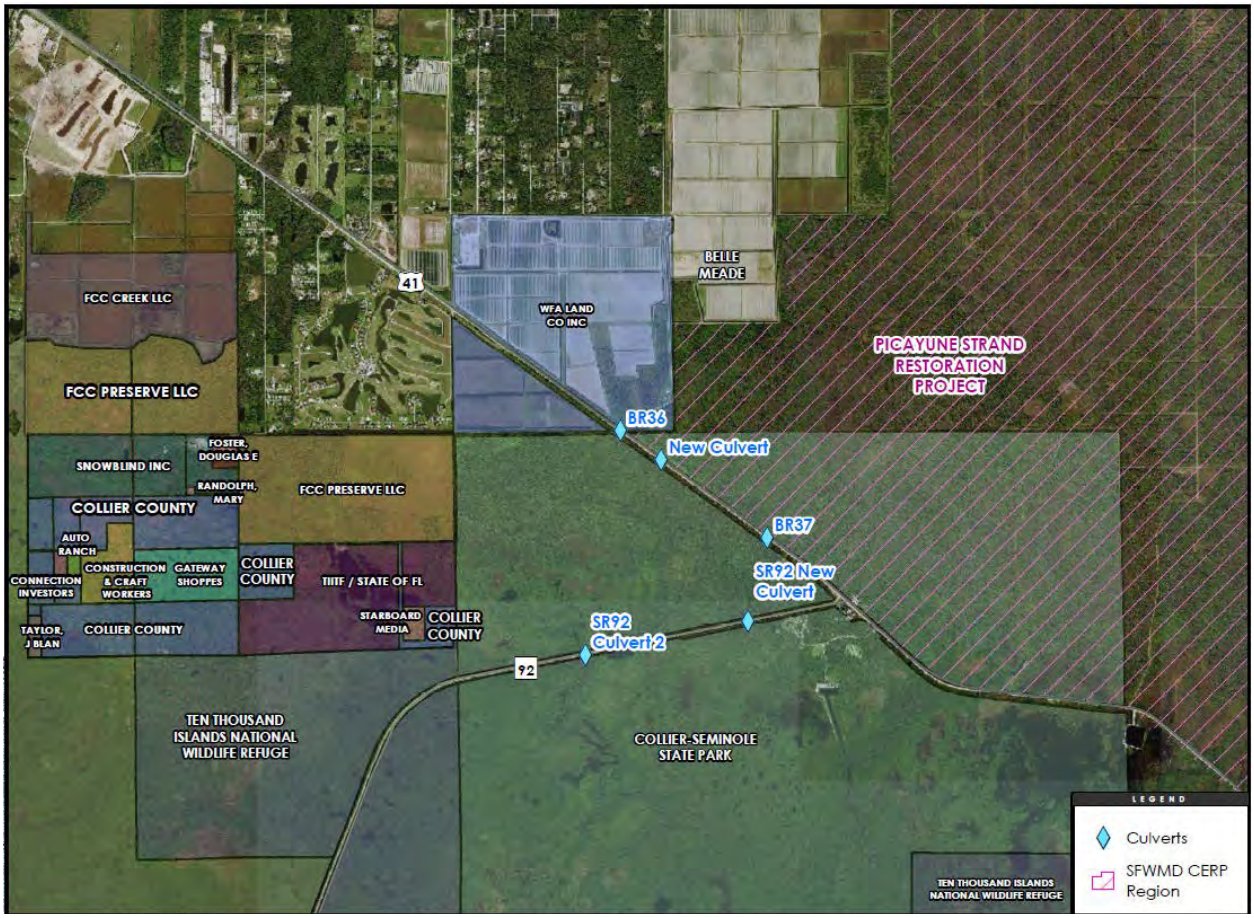

Utilizing the above criteria, each parcel or parcel area was then scored using each criteria on a 7-point scale to assist in determining the parcel or parcel group that most effectively can achieve the project objectives. The results of this evaluation for each parcel or parcel area can be found under **Section 6.2.2**. Following this analysis, a scoring matrix and final ranking of all parcels or parcels groups was performed. These results can be found in **Section 6.2.4**. Please note that due to land ownership and potential land use regulatory restrictions, one or more parcels or parcels groups may be most appropriately combined to achieve the project objectives. **Section 6.2.5** includes an overview for multiple project sequencing.

Lastly, results of this study are listed in **Section 7.0** with the study conclusion and additional considerations provided in **Section 8.0**.

4.0 STUDY AREA FOR ALL PARCELS

The initial parcel study area was developed to reflect a similar focus area contained in the WQFS as shown in **Figure 4-1** below. The limits of the study area were intentionally broadened to include a larger geographic area (**Figure 4-2**) than that shown in the WQFS to ensure an adequate number of parcels as well as an appropriate geographic distribution were initially considered.

Figure 4-1: Initial Study Area

4.0 Study Area for All Parcels

The number of individual parcels contained in the study area totaled 1,935. Each individual parcel within the study area was assigned a Site ID Number and all associated parcel data including parcel ID numbers, and ownership, was populated in a spreadsheet (**Appendix A**) for tracking and notation purposes.

Figure 4-2: Initial Study Area Parcel Identification

Following the identification of all parcels within the study area, the project team worked with the Basin staff to develop a list of initial exclusionary criteria for application to all parcels in the study area as further discussed in **Section 5.0** of this report.

5.0 EXCLUSIONS

The exclusionary criteria developed by the project team assessed the overall potential of individual parcels or parcel areas to meet the project goals as established in the WQFS. The initial list of exclusionary criteria included the following:

- Location within the CERP Boundaries
- PUD Zoning
- Developed Land and Active Agriculture
- Parcel Size

Section 5.1.5 includes the Revised Parcel Map and List 1 created by excluding all parcel and parcel areas removed from consideration based on exclusionary criteria. Full-size maps for the initial exclusions are in **Appendix B** and the Revised Parcel Map and List 1 are located in **Appendix C**.

The project team then met with Basin and Collier County staff, knowledgeable about the general parcel characteristics in the project area as well as surface flow characteristics and performed a tabletop review of each parcel included in the remaining group. As each parcel area and its location were reviewed, additional exclusionary criteria were developed for parcels or parcel areas that would not be able to meet the project objectives. These criteria included:

- Surface Flow Characteristics
- Physical Connectivity Limitations
- Presence of Mangrove and Salt Marsh Areas

Section 5.2.4 includes the Revised Parcel Map 2 created by excluding all parcel and parcel areas removed from both the initial and additional lists of exclusionary criteria. Full-size maps for the additional exclusions are in **Appendix D** and the Revised Parcel Map and List 2 are located in **Appendix E**.

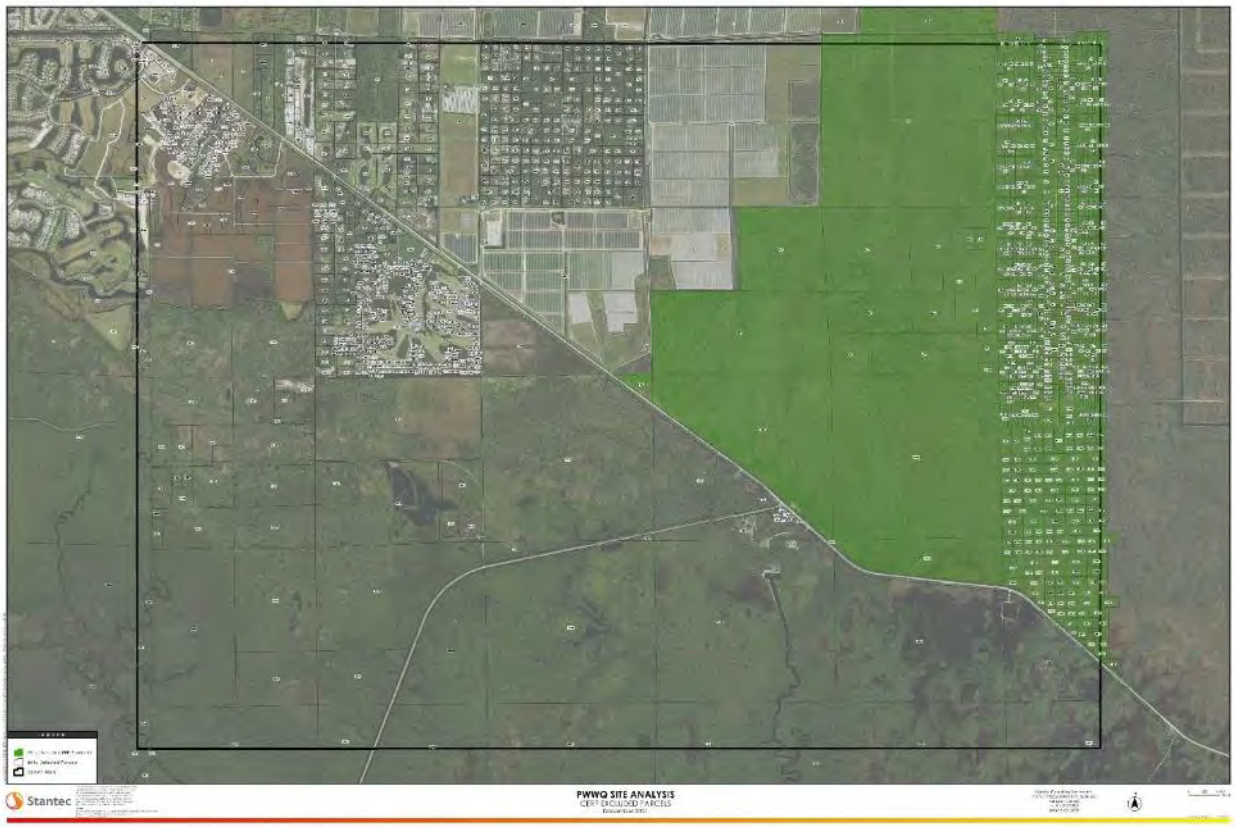

The following sections define each initial and additional exclusionary criterion identified above and provides figures to illustrate the results.

5.1 INITIAL EXCLUSIONARY CRITERIA

5.1.1 Location within the CERP Boundaries

Due to the nature of the CERP project and the potential difficulty in re-designating parcels within the CERP for a water quality focused project, all CERP lands shown in green in **Figure 5-1** were initially excluded; however, after further communication between relevant agencies, the westernmost triangular shaped parcel within the CERP lying north of US 41 was considered as a potential candidate parcel. The CERP overlay encompasses roughly ¼ of the overall initial study area.

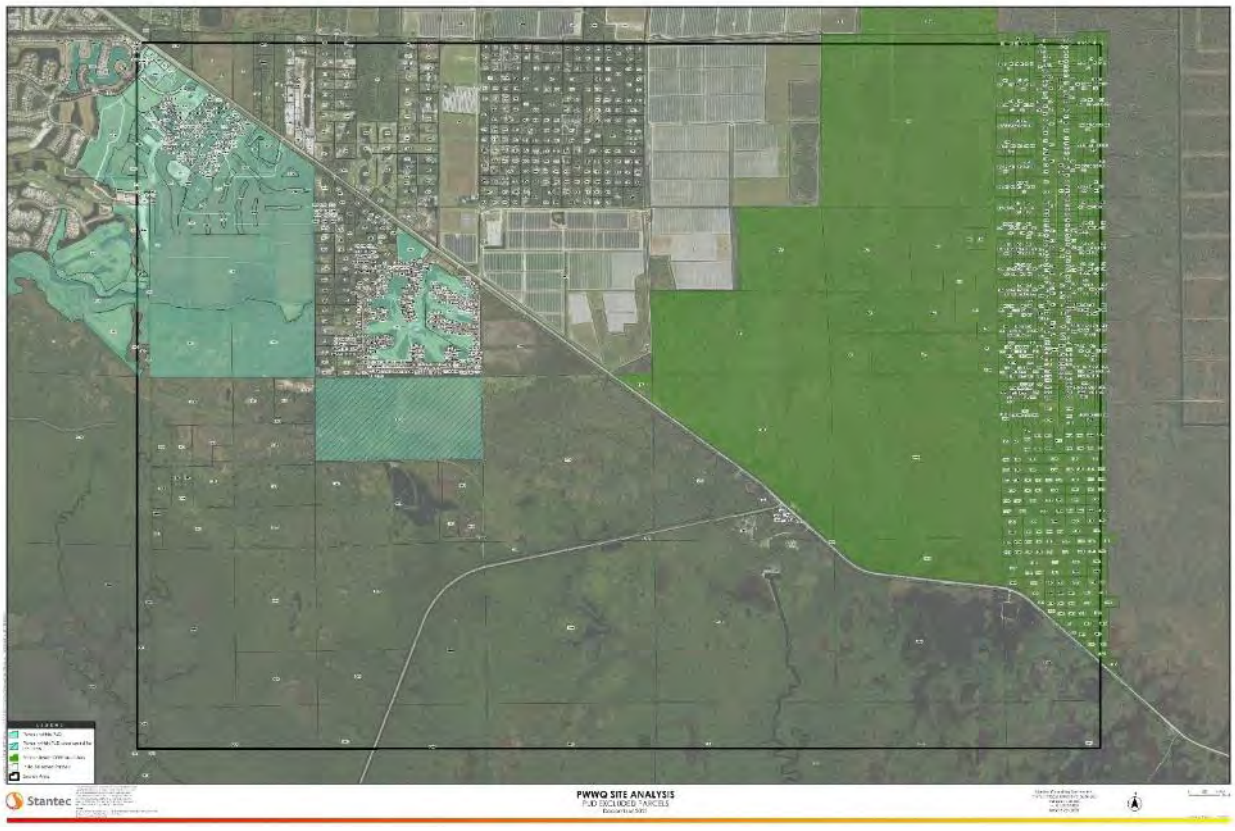

Figure 5-1: Initial Exclusionary Criteria – CERP

5.1.2 PUD Zoning

Lands currently entitled with PUD zoning (including PUD, RPUD, IPUD, CPUD, CFPUD and MPUD) were excluded due to the planned development nature of these parcels. These primarily included master planned communities or parcels owned by large investor or developer interests. However, Site ID #1920 was not excluded due to its proximity to the primary source of flow as well as information gained during the WQFS that warrants further investigation. The excluded parcels due to PUD zoning are shown below in a blue/green color in **Figure 5-2**, parcel #1920 is shown with hatching.

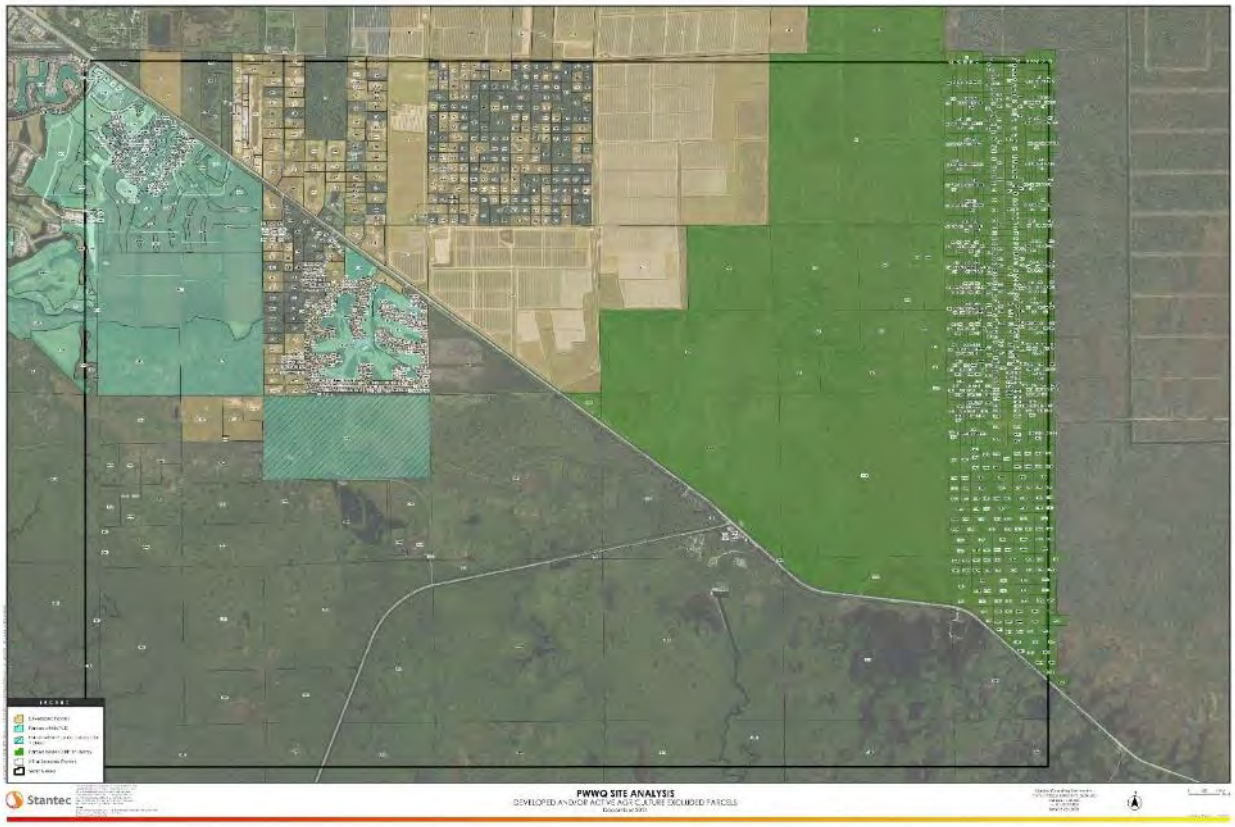

Figure 5-2: Initial Exclusionary Criteria – PUD

5.1.3 Developed Land and Active Agriculture

For purposes of the exclusionary criteria only vacant parcels or parcel areas are considered. This analysis excluded all parcels that are currently developed with an active use such as residential and commercial uses or known to be in active agricultural or horticultural production. The excluded parcels are shown in yellow in **Figure 5-3** below.

Figure 5-3: Initial Exclusionary Criteria – Developed & Active Agriculture

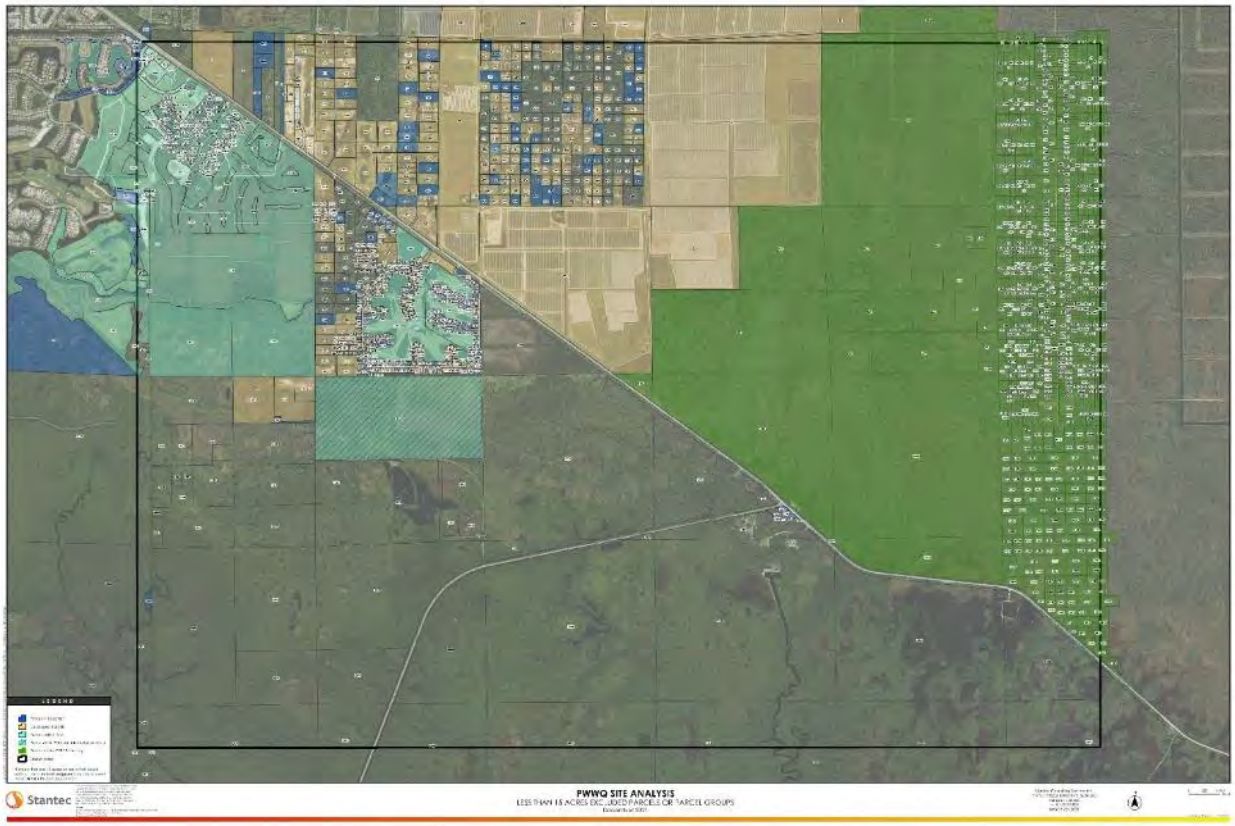

5.1.4 Parcel Size

Only parcels or parcel areas that are 15 acres or greater in size or those that could be combined with adjacent parcels to equal 15 acres or greater were identified for further consideration. This 15-acre size criterion was established during the feasibility study as the minimum area needed to support a project. All parcels or parcel areas not meeting this acreage minimum were excluded and are shown in a light blue color in **Figure 5-4** below.

Note that, for example, if there are three parcels that are each five acres and are contiguous to one another they could be aggregated into 15 acres and therefore, would not be excluded based on this criterion. A ten-acre parcel however that is not contiguous to any other parcel or parcel area that provides for an aggregate size of 15 acres would be excluded.

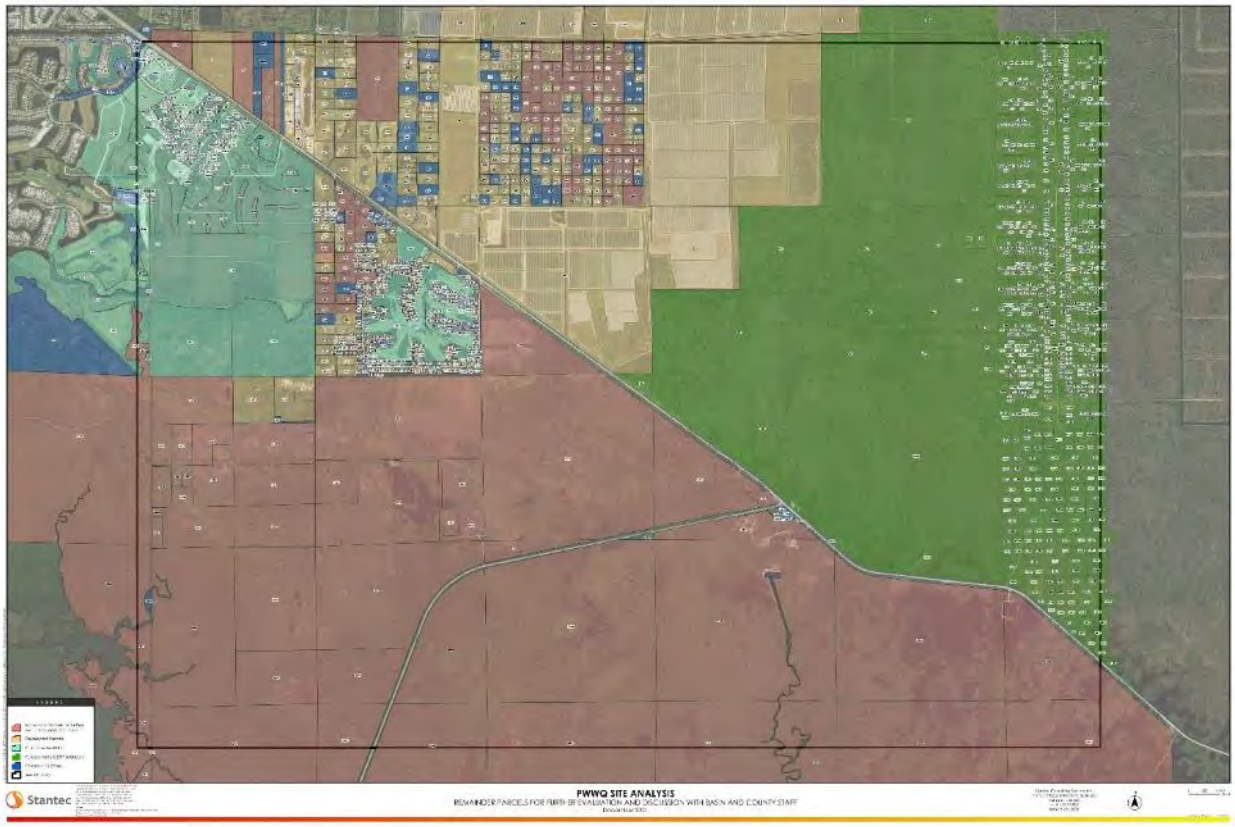

Figure 5-4: Initial Exclusionary Criteria – Parcels Less Than 15 Acres

5.1.5 Revised Parcel Map and List 1

As each of the previously stated initial exclusionary criteria overlays are applied, the remaining “eligible” parcels or parcel areas were identified and are shown in brown below in **Figure 5-5**. This resulted in a total of 64 parcel/parcel areas comprised of 116 parcels. A full-size map and table identifying these parcels can be found in **Appendix C**.

Figure 5-5: Revised Parcel Map 1

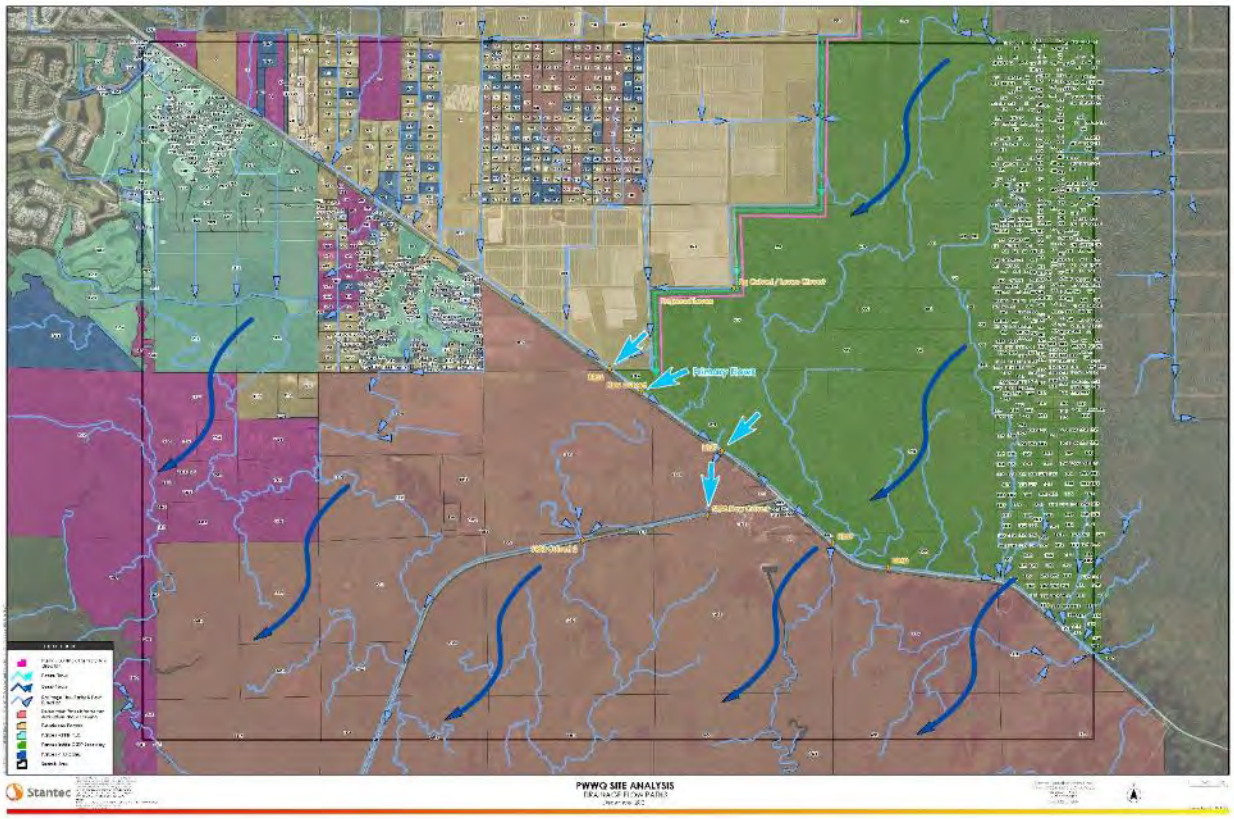

5.2 ADDITIONAL EXCLUSIONARY CRITERIA

5.2.1 Surface Flow Characteristics

As contained in the WQFS, one key objective of the future project is its ability to intercept the primary flows within the Tamiami Canal to provide water quality treatment prior to these flows reaching downstream OFWs. To meet this goal, parcels or parcel areas that are not suitably positioned to accept the primary flows were mapped and excluded and are shown in a light purple in **Figure 5-6** below.

Informing this determination was the creation of a flow map for the project area. This map was created using several sources of information. Initially, current LIDAR data were utilized to prepare a **Digital Elevation Model (DEM)** and utilized elevations defined by the DEM to model flow direction for existing conditions. Following the existing conditions, additional flow arrows characterizing post PSRP flows were added to the map. Finally, the map output was reviewed and updated using local knowledge from Collier County and the District to ensure that the parcels that would have minimal ability to receive the primary flows were excluded from further consideration.

Figure 5-6: Additional Exclusionary Criteria – Water Flow

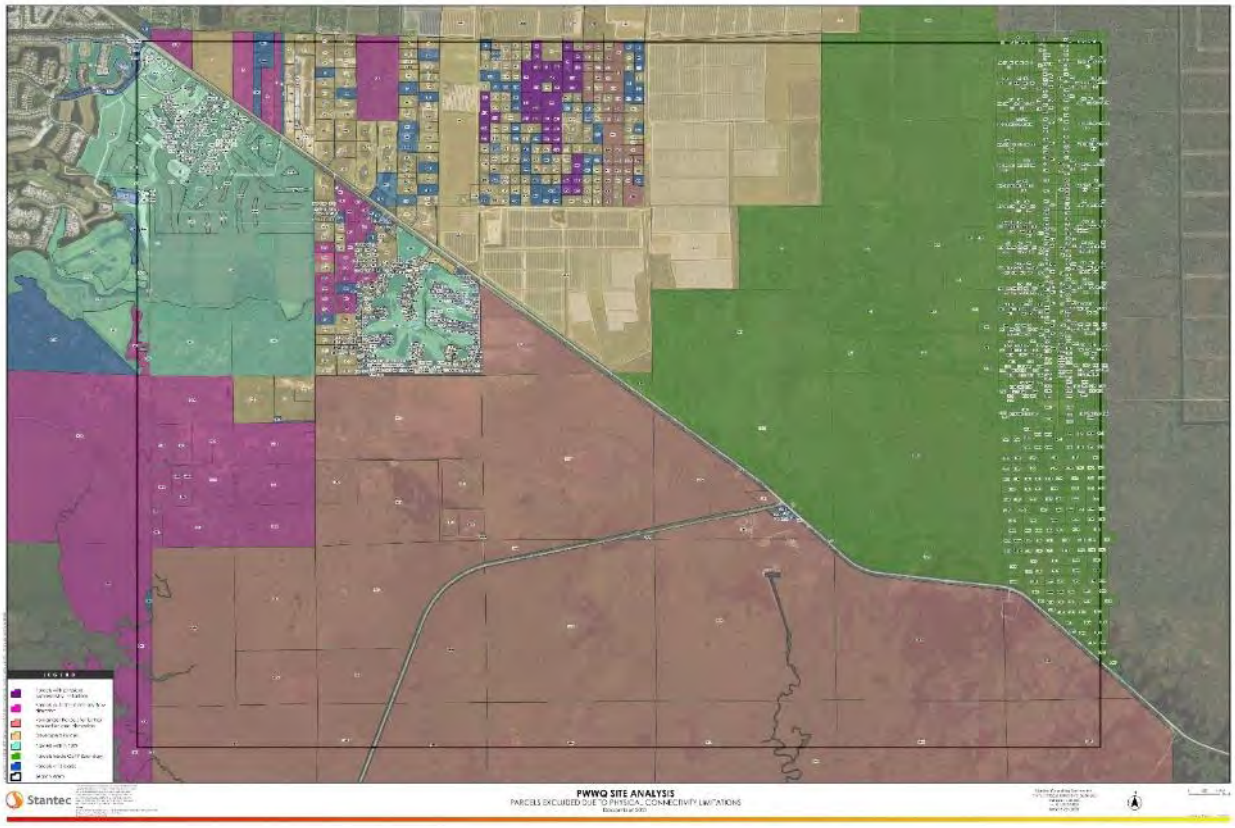

5.2.2 Physical Connectivity Limitations

Parcels or parcel areas that would require significant disruption of public infrastructure such as streets, roadways, existing utilities (including powerlines and transmission lines), easements, or other related items supporting public infrastructure such as significant drainage elements were also excluded.

This exclusion applied primarily to parcel groups located in the western portion of section 16 which is a residential area surrounded by active agricultural lands. Due to the existing rights-of-way, transmission infrastructure and easements as well as local drainage elements, these parcels were excluded and are shown using a dark purple color in **Figure 5-7** below. Potential impacts to public infrastructure resulting from conveyances to or from the treatment project are not excluded at this time but will be evaluated on a case-by-case basis.

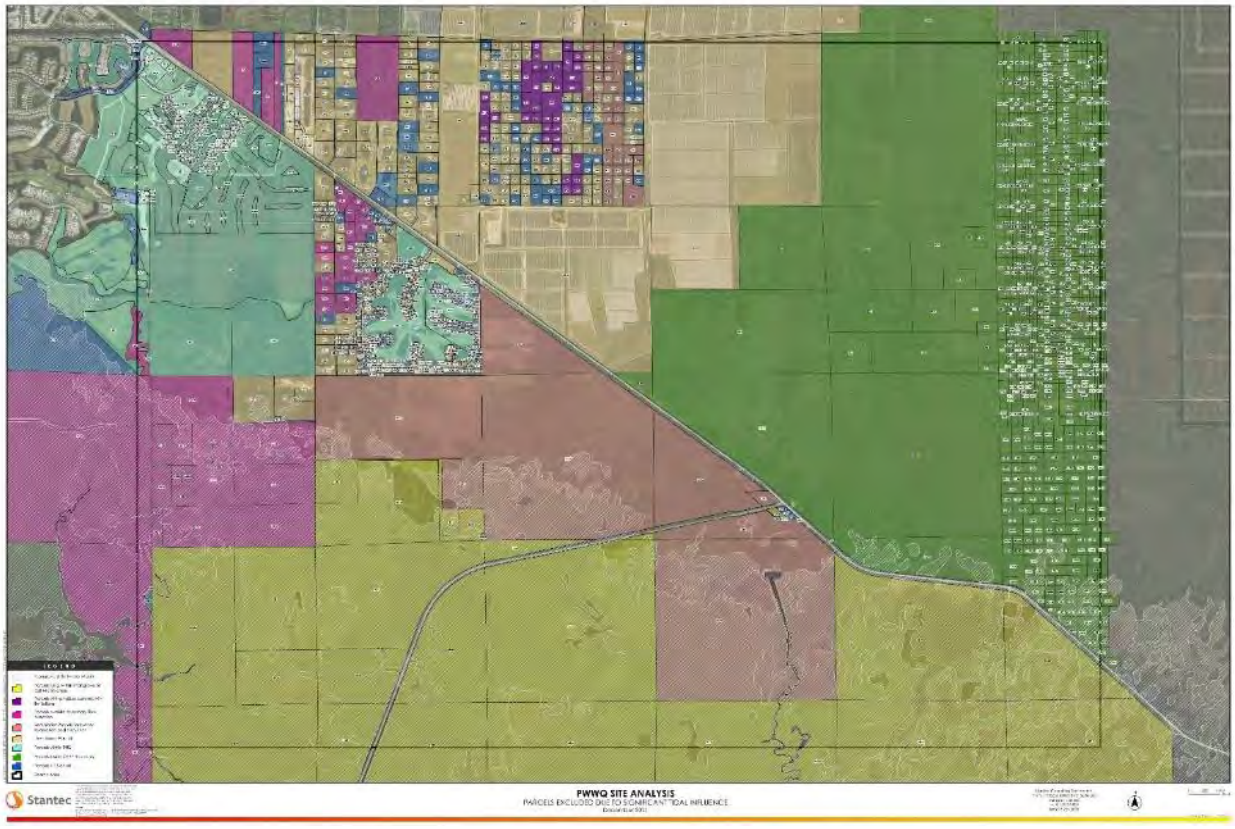

Figure 5-7: Additional Exclusionary Criteria – Physical Connectivity

5.2.3 Presence of Mangrove and Salt Marsh Areas

As identified in the WQFS, the proposed project is intended to intercept and treat freshwater surface flow in the Tamiami Canal. To treat this water most effectively as well as to measure the effectiveness of the treatment process(es), it is critical to intercept the flows prior to interactions with a saltwater environment. **Figure 5-8** below applies the mapped limits of Mangrove and Salt Marsh communities obtained from publicly available dataset representing the Land Cover and Land Use for 2014-2016 within the boundaries of the SFWMD. Parcels shown in bright yellow have been excluded due to having less than 15 acres of area not identified as Mangrove or Salt Marsh communities.

Figure 5-8: Additional Exclusionary Criteria – Presence of Mangrove & Salt Marsh Areas

5.2.4 Revised Parcel Map and List 2

Following the application of the Initial and additional Exclusionary Criteria identified above, the remaining "eligible" parcels/parcel areas were identified and are shown in **Figure 5-9** and **Table 5-1** below. This resulted in a total of 10 parcel/parcel areas comprised of 43 parcels ranging in size from 2.5 acres to ±640 acres. Of these 43 parcels, 28 parcels were approximately 2.5 acres and eight were approximately 5-10 acres in size. In total, 36 of the 43 parcels are 10 acres or less, requiring aggregation with adjacent parcels to meet the minimum size criteria with the remaining seven parcels being 48.8 acres or greater. A full-size map and table identifying these parcels/parcel areas has been created and can be found in **Appendix E**.

Figure 5-9: Revised Parcel Map 2

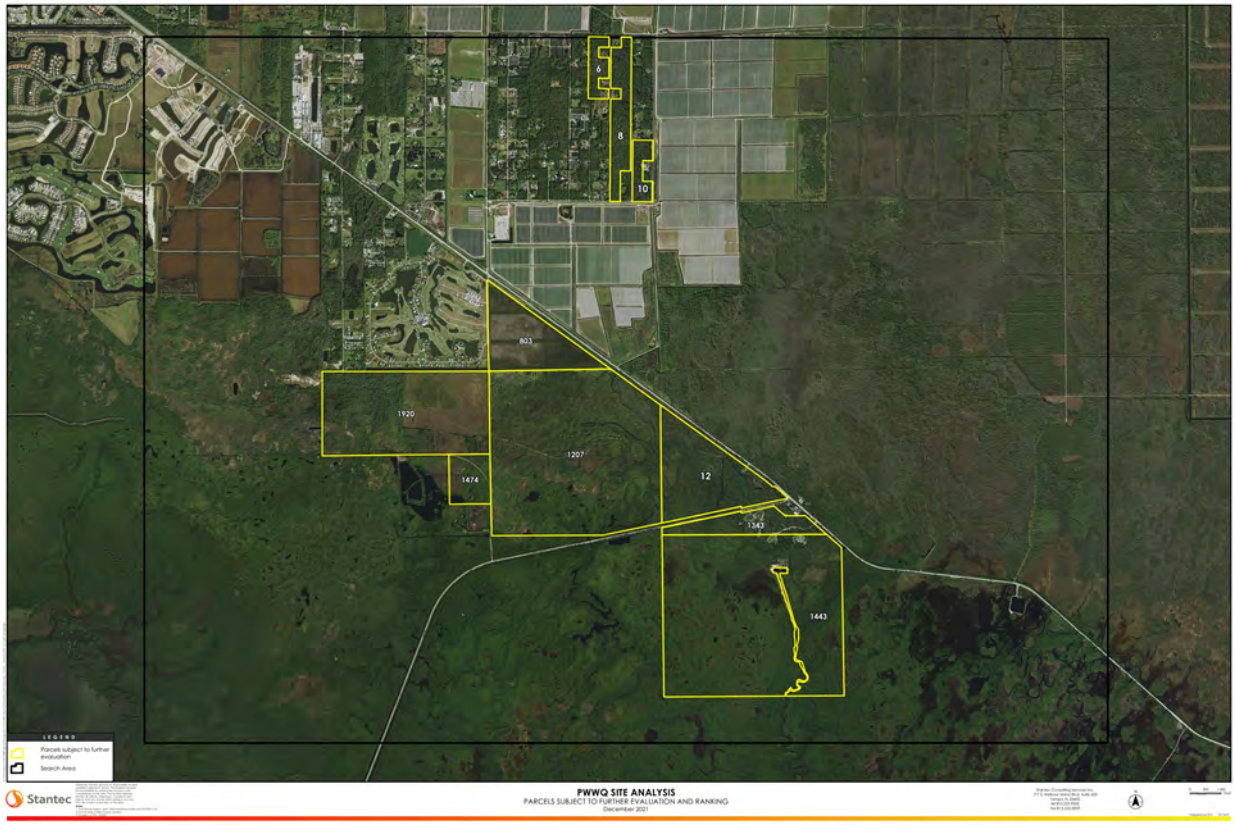

Table 5-1: Revised Parcel List 2

Site ID Number					803	1207	1343	1443	1474	1920
Parcel Area ID	6	8	10	12						
Total Acreage	24.9	67.2	24.9	178.6	131.5	640.8	67.9	+/-640	48.8	330.6
No. of Individual Parcels	8	21	6	2	1	1	1	1	1	1

6.0 EVALUATIVE CRITERIA

Utilizing the Revised Parcel Map and List 2, developed throughout the application of all exclusionary criteria found in (**Appendix E**), the project team performed an evaluation using several Preliminary Evaluative Criteria at the desktop level to further narrow the list of suitable candidate parcels. The Preliminary Evaluative Criteria applied included:

- Hydraulic Distance
- Presence of Uplands
- Ease of Access
- Legal Review

The following sections include graphics showing how each Preliminary Evaluative Criteria was evaluated as well as how the scoring scale was applied for each. Each criterion was scored using a 7-point scale with 1 being the lowest scoring level and 7 being the highest. Full-size maps for the Preliminary Evaluative Criteria are in **Appendix F** and **Section 6.1.5** includes a Preliminary Parcel Ranking matrix which is composed of the scoring results from the Preliminary Evaluative Criteria.

On December 17, 2021, the preliminary ranking of the remaining parcels was presented to the Technical Working Group for review and comment. Input received and reference documents discussed during the meeting as well as those received from the TWG for weeks following the meeting were further reviewed for project application. As a result of the TWG input and comments, additional analysis and an updated parcel or parcel group ranking was performed, resulting in a total of five parcels or parcel groups identified for further evaluation as identified in **Section 6.1.6**.

Building on the above effort, the remaining five ranked parcels and/or parcel areas were then subjected to a more detailed level of review, analysis, and investigation utilizing a set of Secondary Evaluative Criteria. The following Secondary Evaluative Criteria were applied to each parcel as outlined in **Section 6.2** of this document to make a final recommendation and ranking. This Secondary Evaluative Criteria analyzed included:

- Ecological Benefit
- Capital Project Costs
- Water Quality Benefit
- Potential Public Use / Public Asset
- Willing Seller / Ease of Acquisition

Following a discussion of the Preliminary Evaluative Criteria (**Section 6.1**), the Secondary Evaluative Criteria (**Section 6.2**) are discussed for each parcel or parcel area including detailed descriptions and scoring tables. This effort ultimately leads to a final parcel ranking in **Section 6.2.4**.

6.1 PRELIMINARY EVALUATIVE CRITERIA

6.1.1 Hydraulic Distance

Hydraulic distances from the source of the primary flow targeted for treatment were evaluated for each remaining candidate parcel or parcel area. The primary flow area considered was from the roadside canal along US 41 between the southeasternmost extents of the agricultural properties and San Marco Road. This primary flow source represents an area where a project could feasibly intercept both existing and predicted flows (post PSRP). A potential interception point, and its relation to existing and predicted flows are discussed later in this report. Seven ellipses were overlaid on the map with equidistant spacing between the primary flows and the search area as shown below in **Figure 6-1**.

Figure 6-1: Hydraulic Distance

Each ellipse, expanding outward from the primary flow, represents approximately 2,000-linear feet and were scored on a 1 – 7 scale with 1 being furthest from the primary flow and 7 being central to the primary flow area itself as shown in **Table 6-1**. A parcel or parcel area closer to the primary flow ranked higher than one farther away, indicating a location that more easily will accept the primary flows from the PSRP.

Table 6-1: Hydraulic Distance Scoring

Score	1	2	3	4	5	6	7
Hydraulic Distance (LF)	> 10,000	< 10,000	< 8,000	< 6,000	< 4,000	< 2,000	Central to Primary Flow Area

6.1.2 Presence of Uplands

Presence of Uplands was identified utilizing existing available **Florida Land Use, Cover and Forms Classification System (FLUCCS)**, and soils maps. For each parcel or parcel group, publicly available FLUCCS and soils maps were analyzed, and areas not designated as wetlands by classification were tabulated. Since all parcels being reviewed were in areas mapped as having hydric soils, the soil map classifications were not factored into the scoring for this evaluative criterion.

Using solely 2016 FLUCCS GIS shape files, developed by the South Florida Water Management District, two assessments were made:

First, the gross acreage for each parcel mapped as ‘non-wetland’ areas were tabulated. Two parcels failed to meet the minimum project area of at least 15 acres of non-wetland areas (Parcel group 10 and parcel 1474) and were excluded from further evaluation.

The second assessment was to review the location of the non-wetland acreages on each parcel for the purpose of determining the most suitable project site. Priority was given to parcels where the non-wetland areas are in the largest, most contiguous configuration and scores were applied accordingly. Where areas were near contiguous and could be hydraulically connected without significant impacts to wetland areas, they were combined for scoring purposes.

Figure 6-2 below is a sample of the mapping of vegetation by FLUCCS classification used for analysis and scoring purposes. As shown below, while parcel group 12 has a total of 31.47 acres of non-wetland vegetation, they are located in two areas that cannot be physically connected without significant impacts to wetland communities. Therefore, the largest contiguous area which is 22.19 acres in size was used for ranking purposes. **Table 6-2** below shows the ranking scale utilized for this assessment.

Figure 6-2: Contiguous Non-Wetland Area Mapping

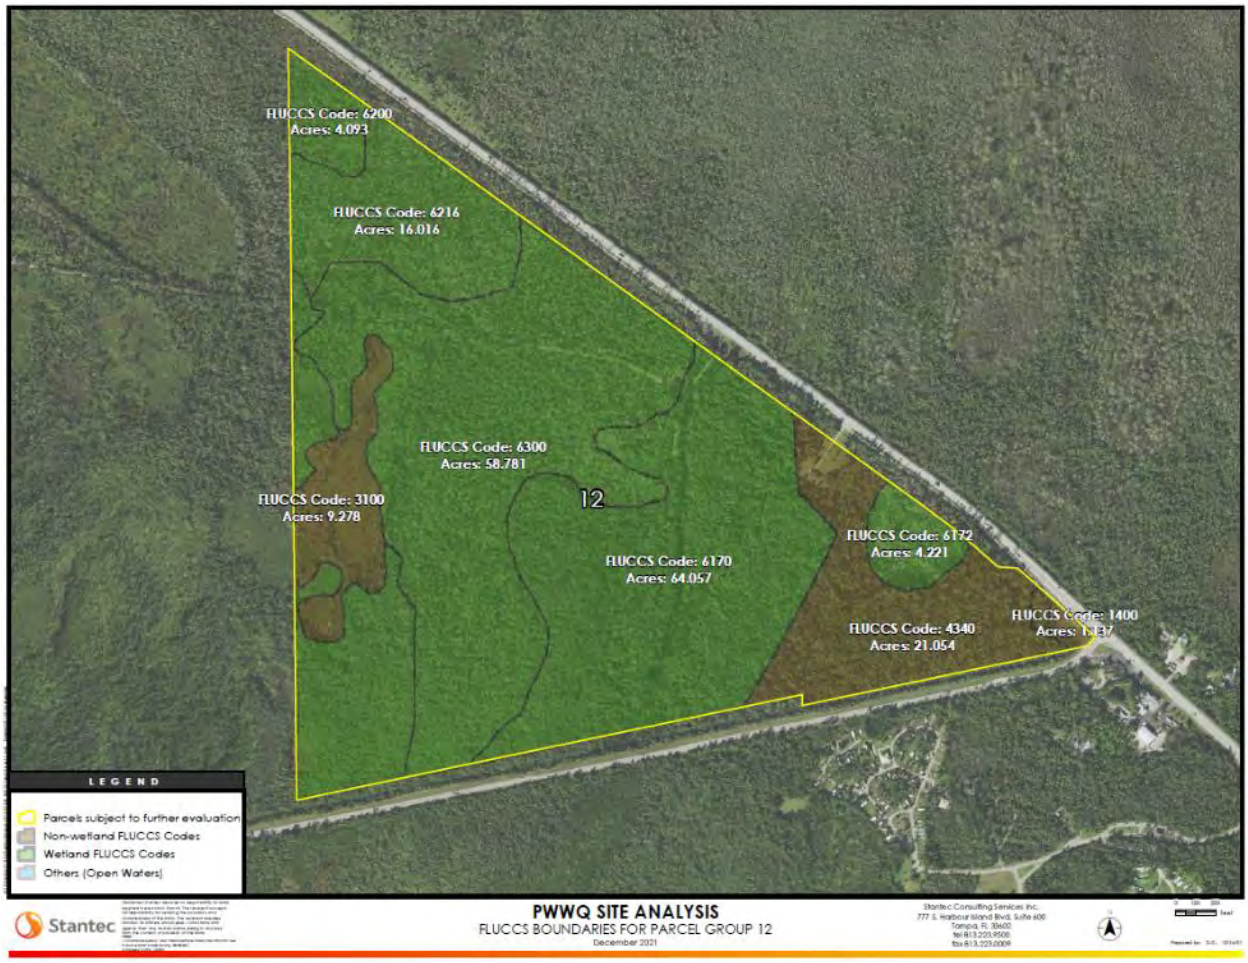

Table 6-2: Contiguous Non-wetland Area Scoring

Score	1	2	3	4	5	6	7
Largest Contiguous Non-wetland Area (Acres)	15-35	35-55	55-70	70-90	90-110	110-130	130-150

Note: Any parcel with 100% wetland FLUCCS codes will score a zero in this category and will be excluded from further consideration.

6.1.3 Ease of Access

Ease of Access is defined for this assessment as the distance from the largest contiguous non-wetland area (per FLUCCS mapping in **Section 6.1.2** above) to a publicly available road or driveways that can provide access for construction and long-term maintenance. Additional consideration was given if the most direct route of access resulted in significant disruption to sensitive ecological communities or presented additional costs or difficulties such as crossing of water bodies or disruption of public infrastructure. For each parcel, a figure as illustrated below (**Figure 6-3**) was created for the purpose of assessment and scoring. The relevant scoring criteria are shown in **Table 6-3**.

Figure 6-3: Ease of Access

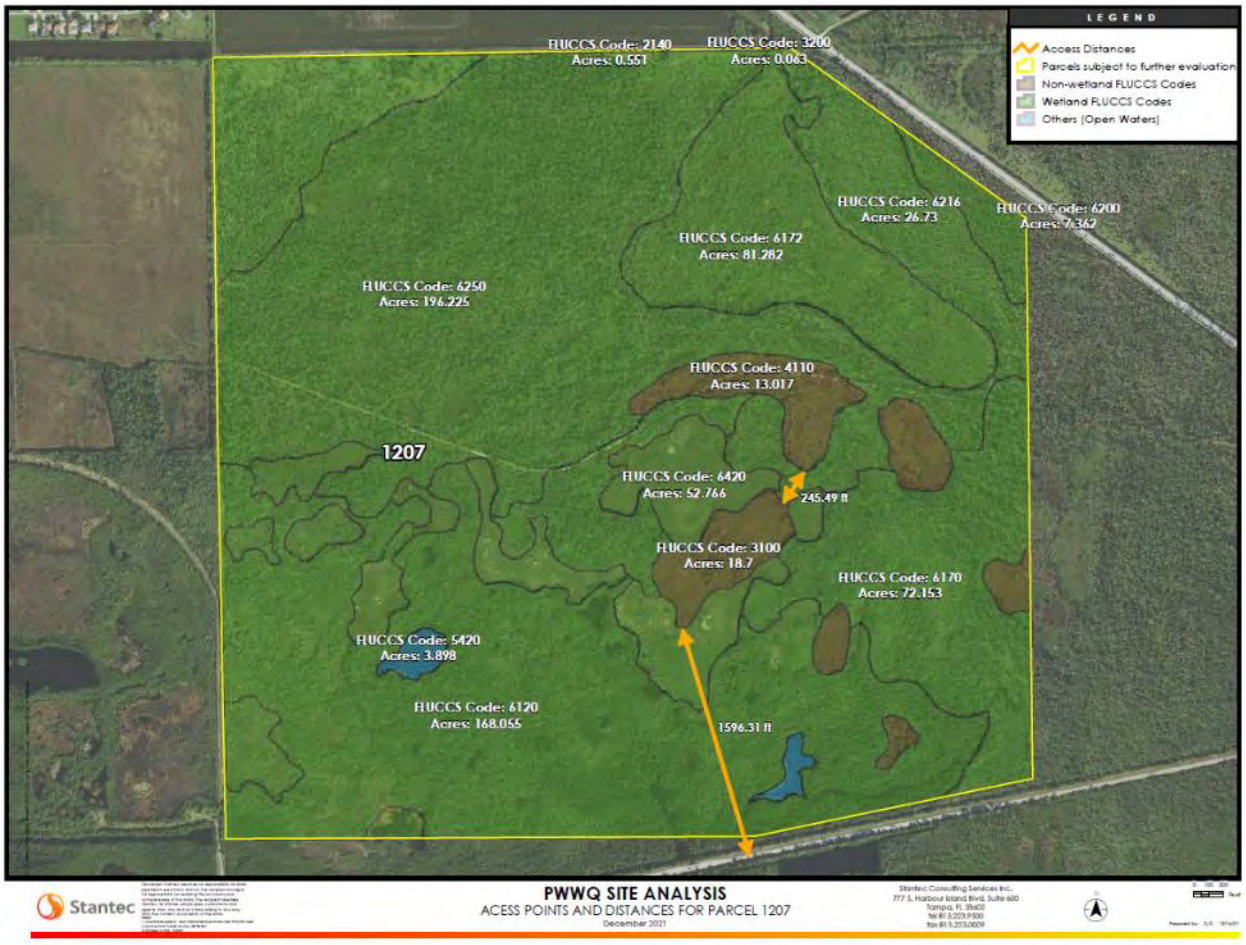

Table 6-3: Distance to Publicly Maintained Road Scoring

Score	1	2	3	4	5	6	7
Distance to Publicly accessible road (LF)	< 3/4 mile w/sig. impacts	< 1/2 mile w/sig. impacts	< 1/4 mile w/sig. impacts	< 3/4 mile	< 1/2 mile	<1/4 mi	Direct Access

6.1.4 Legal Review

The following is a summary of the title reports reviewed for the forty-three (43) parcels identified by Stantec and the District as potential sites for a water quality project as identified in the Water Quality Feasibility Study. This summary outlines the types of encumbrances found and identifies areas where additional research may be needed to determine whether the encumbrance is still valid and/or whether it would prevent the District from using the property for its intended purpose. The full review can be found in **Appendix G**. During the legal review, it was discovered that one parcel in Parcel Area 9 was developed and should have been removed from the group. In doing so, the remainder of Parcel Area 9 fell below the 15-acre minimum aggregate area and was removed from further evaluation.

6.1.4.1 Large Parcels

The encumbrances against Site IDs 803/1475, 1206/1207, 1260, 1321, 1474, and 1920 (the "Large Parcels") are each unique and a summary of each is provided in the attached memorandum titled "Large Parcel Property Analysis."

Site ID 803/1475 is subject to several oil, gas, and mineral right ("OGM") reservations. This is one of many parcels that is subject to such a reservation. For the time being, the reservation has been noted, but no further analysis has been performed as to whether the reserved rights are still valid and can be exercised by the party holding them. There is also a roadway easement over the southern sixty feet (60') of Parcel 1475 from the east side of US 41 to the east line of Section 21. The easement is contained in several documents, each of which is listed in the "Large Parcel Property Analysis" memorandum, and one such document enlarges the right to include roadway and utility uses, while one only grants a terminable license for use as a road for agricultural use. This is the only parcel of all 43 reviewed that also recently had agreements recorded relative to this specific project. That is, a Perpetual Access Road and Maintenance Easement and Temporary Construction Easement in favor of the District were recently recorded in conjunction with the Picayune Strand Restoration Project.

Several documents relative to **Site ID 1206/1207** and **Site ID 1260** contain OGM reservations, each of which is summarized in the attached "Large Parcel Property Analysis" memorandum. The deeds conveying the properties also contain a restriction as to park use that reads as follows:

> The lands shall be held by Florida Board of Forestry and Parks only so long as said lands shall be embraced or included with a State public park to be known as Collier-Seminole State Park and maintained wholly by said Florida Board of Forestry and Parks, or other State Agency, or its proper officials.

The 99 year park lease currently in effect for these properties similarly conditions the use of the property by allowing the lessee to develop, improve, operate, maintain and otherwise manage said land for public outdoor recreational, park, historic, conservation and related purposes and provides lessee with the right to enter into further agreements or to sublease all or any part of the land so long as the agreement and/or sublease shall effectively carry out and further the general purposes herein described. While these restrictions have been noted, no additional research has been done to determine whether there is case law to suggest how courts have applied it previously. Accordingly, it may be that the park use restrictions may still allow the District to use the property for the project.

Finally, both properties are subject to State Highway Dedications and road right-of-way easements, which are also summarized in the “Large Parcel Property Analysis” memorandum.

The only encumbrance against **Site ID 1321** is an OGM reservation, though surface rights have been waived.

Site ID 1474 is subject to a roadway easement in favor of all current owners or abutting lands and the public over the north thirty feet (30’). It is also subject to restrictive covenants that were recorded as a condition of Army Corps of Engineers (ACOE) Permit Number 20001434. The specific restrictions are listed in full in the attached “Large Parcel Property Analysis” memorandum and should be reviewed before determining whether this is an appropriate site for the District’s intended use.

Site ID 1920 is encumbered by two mortgages. The first of the mortgages includes clauses relative to the care and transfer of the premises, which may have an impact on use of the property for the intended purpose. The second mortgage refers to covenants in the loan agreement. However, the loan agreement is not a recorded document, so it is not possible to determine whether its provisions would impact the District’s proposed use. The full citation of the referenced language is included in the section of the enclosed memorandum that addresses Site ID 1920. Both mortgages may encumber additional property and, as such, release of Site ID 1920 may be an option, but the title documents have not been reviewed to determine this.

6.1.4.2 Section 16 Parcels

All properties within Parcel Areas 6, 8, 9, and 10 (the “Section 16 Parcels”) were originally owned by the State Board of Education of Florida. When conveying the property to Walter G. Sorokoty on January 28, 1958, the State Board of Education reserved for itself and its successors title to an undivided three-fourths of all phosphate, minerals, and metals, and title to an undivided one-half of all petroleum that may be in, on, or under the described land (collectively referred to hereinafter as “OGM rights”). This reservation was carried forward in the warranty deeds from Sorokoty to third parties (except as to Site ID 42), together with the following restrictions:

1. Reservation of a right-of-way easement for all the usual purposes of ingress and egress in and under the [West and/or East and in some cases South] 30 feet of the above-described premises. The reservation shall run with the land and shall insure to the benefit and use of the owner/s of said described premises and to the owners of the contiguous lands bordering and touching said right-of-way easement.

2. Said premises shall not be used for a junk yard, dumping ground or for the accumulation of garbage or foul-smelling matter other nuisances which may be detrimental to the comfort, health, or safety of the inhabitants of the surrounding community.

3. There shall not be removed from said premises any quantity of soil, which will lower the uniform grade of the property.

4. Said premises shall not be purchased or occupied by any person other than a member of the Caucasian race.

The foregoing was included in the deeds for all Section 16 Parcels. The location of the easement referenced in Item 1 above depended upon the location of the parcel, as the purpose was to create access to all parcels within Section 16, though it should be noted that each title report for the Section 16 Parcels includes a notation that lack of access may be an issue. The specific location of the easement for each parcel can be found in the individual Parcel Area Property Analysis memorandums attached hereto, each of which contain the specific encumbrances applicable to the individually listed parcels.

Each of the title reports for the Section 16 parcels also contained reference to an easement from Sorokoty to Barron Collier, Jr. over the West 30 feet, the South 30 feet and the East 30 feet of Section 16, Township 51 South, Range 27 East for a perpetual right-of-way of necessity of egress and ingress. However, the easement only affects those parcels that are located on the western, eastern, and southern boundaries of Section 16. For purposes of this analysis, the easement to Collier only impacts the parcels with the following Site IDs: 180 (east), 222 (east), 245 (east), 361 (east), 398 (east), 480 (east and south), and 515 (south). The easement contains language that provides that the easement area may be used only for the purpose stated, with the authority to improve and responsibility to maintain retained by Sorokoty.

Separate from the reservation of OGM rights, the grant of easement, and the restrictions discussed above, there are a few additional encumbrances that only apply to specific parcels:

1. Site ID 75 is also subject to:

    (a) A Lee County Electric Cooperative (LCEC) easement over the south six feet (6') to construct, operate and maintain single poles and lines for the transmission and distribution of electricity and communications facilities, including other poles, guys, anchors, footings, ground connections, attachments, fixtures, equipment, and accessories above or below ground as necessary or desirable in connection therewith. The easement further provides that the parties agree that no trees other than citrus trees and no buildings or structures other than fences will be located or constructed within the bounds of said right-of-way by the grantor, their heirs, and assigns. The grantors, however, reserved the right to use said right-of-way for general farming, citrus grove, or pasture purposes.

    (b) A LCEC easement over the easterly eight feet (8') of the westerly thirty-eight feet (38') and northerly eight feet (8') to be used for the construction, operation, and maintenance of one or more overhead and underground electric distribution lines, including, but not limited to, wires, poles, cables, conduits, anchors, guys, and roads, trails, and equipment associated therewith, attachments and appurtenant equipment for fiber optic telecommunications and television purposes.

2. Site ID 109 is also subject to a LCEC easement over the north six feet (6') to construct, operate and maintain single poles and lines for the transmission and distribution of electricity and communications facilities, including other poles, guys, anchors, footings, ground connections, attachments, fixtures, equipment, and accessories above or below ground as necessary or desirable in connection therewith. This easement contains the same language relative to use of the easement area as that identified in Item 1(a) above for Site ID 75.

3. Site ID 245 is subject to a mortgage in favor of Mary Kaczynski.
4. Site ID 301 is subject to a mortgage in favor of Lake Michigan Credit Union.
5. Site ID 393 is subject to a Judgment/Certificate of Delinquency for amounts owed by Jose A. Lara. The specific property is not mentioned in the Judgement but applies to all property owned by Jose A. Lara. The deed for Site ID 393 refers to the grantee as Jose Lara, so it may not be the same individual.
6. Site ID 395 is subject to a mortgage in favor of Finley Fryer.
7. Site ID 417 is subject to:
    (a) Mortgage in favor of Victor Meza and Norma A. Lemus.
    (b) Final Summary Judgment against Flabia Izquierdo.
    (c) Default Final Judgment against Flabia Izquierdo.
    (d) Notice of Lien against Jose Carlos Terra Izquierdo. As with the Judgment mentioned in Item 4 above, the party to the Notice of Lien and the property owner may not be same.
8. Site ID 515 is subject to a Federal Tax Lien against Fabian Marin.

In addition to the foregoing, it should be noted that, pursuant to the Collier County Property Appraiser property information and the Collier County Property Appraiser's aerial, Site ID 245 is not vacant.

Given the age of the covenants recorded in the Sorokoty deeds, it is possible that some may have been extinguished by the Marketable Record Title Act found in Chapter 712, Florida Statutes. However, this has not been analyzed during the initial review of the title reports.

6.1.4.3 Land Use Restriction Scoring

None of the parcels in this study appear to have restrictions that specifically prohibit the proposed project, based on the title review performed as part of this draft assessment. However, depending on ownership and use, many of these parcels may require additional action or authorization from local, state, or Federal bodies prior to the proposed project being implemented on the candidate parcel. For this reason, recognizing the hierarchy of parcel ownership and the relative difficulty associated with obtaining the necessary land use approvals at each level of ownership (private, local government, state government, etc.), the scale shown in **Table 6-4** below was applied for the purpose of scoring.

Table 6-4: Land Use Restriction Level Scoring

Score	1	2	3	4	5	6	7
Land Use Restrictions	Federal land use approval required		State land use approval required		Local land use approval required		No land use approval required

6.1.5 Preliminary Parcel Ranking

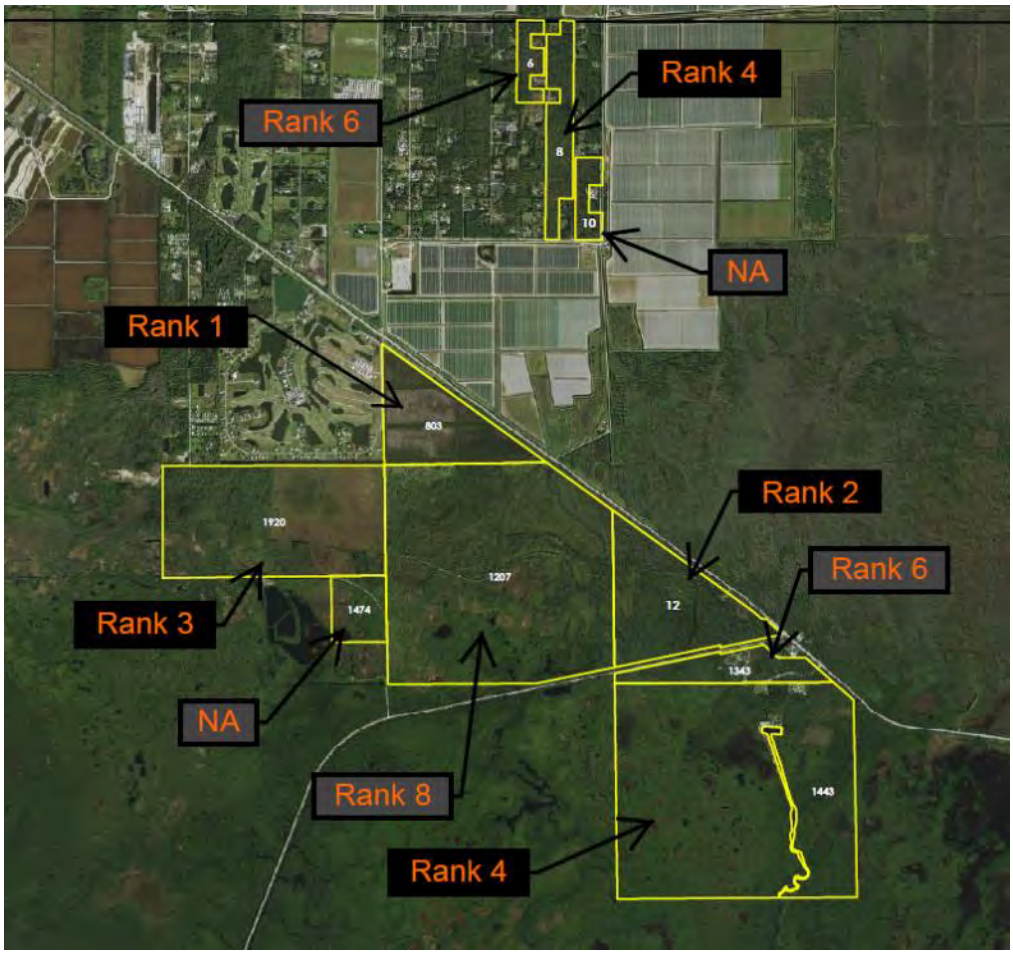

Following the application of the scoring system detailed above, each parcel and parcel area was scored and ranked numerically with no weighting applied to any of the scoring categories (**Table 6-5**). The parcel scores and ranking are shown below with the highest score being the top ranked parcel. **Figure 6-4** provides a map identifying the rank of all parcel and parcel areas.

Table 6-5: Preliminary Parcel Ranking Matrix

Site ID Number					803	1207	1343	1443	1474	1920
Parcel Area ID	6	8	10	12						
Total Acreage	24.9	67.2	24.9	178.6	131.5	640.8	67.9	+/-640	48.8	330.6
No. of Individual Parcels	8	21	6	2	1	1	1	1	1	1
Hydraulic Distance	2	3	DNS*	7	6	6	6	6	DNS*	4
Presence of Contiguous Non-Wetlands	1	3	DNS*	1	7	1	2	4	DNS*	7
Ease of Access	7	7	DNS*	7	7	2	6	7	DNS*	5
Land Use Restriction Level	7	7	DNS*	7	7	3	3	3	DNS*	5
Total Score	17	20	DNS*	22	27	12	17	20	DNS*	21
Preliminary Ranking:	6	**4**	NA	**2**	**1**	8	6	**4**	NA	**3**

*DNS indicates the parcel did not score due to the site analysis discovering that the parcel lacks sufficient non-wetland acreage (greater than 15 acres) to meet the objectives of the project. These two parcels or parcel groups are thereby removed from further consideration.

Figure 6-4: Preliminary Parcel Ranking Map – All Parcels

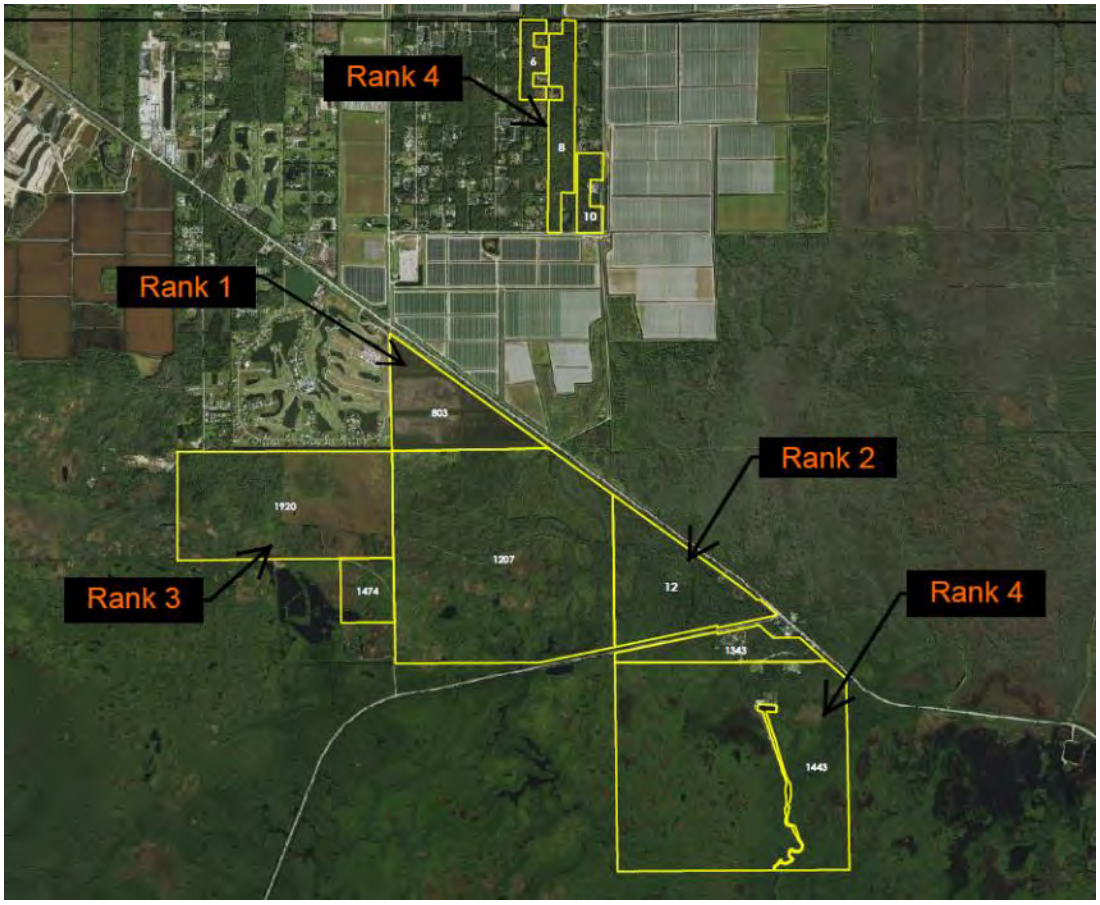

The purpose of this initial scoring and ranking was to develop a list of up to five parcels or parcel areas that will undergo a more thorough evaluation to better determine the suitability and effectiveness of the candidate parcels to achieve the overall project objective.

Based on the ranking and analysis performed as outlined above, it was initially recommended that a more detailed analysis be performed on the following parcels and/or parcel groups starting under **Section 6.2**. A map of these preliminarily ranked parcel/parcel areas can be found in **Figure 6-5** with a full-size map in **Appendix H**. **Table 6-6** lists the parcel/parcels areas by rank.

Table 6-6: Ranked Parcels for Future Analysis

Preliminary Ranking	1	2	3	4	4
Site ID Number	803		1920		1443
Parcel Area ID		12		8	
Total Acreage	131.5	178.6	330.6	67.2	+/-640
No. of Individual Parcels	1	2	1	21	1

Figure 6-5: Preliminary Parcel Ranking Map – Top 5 Parcels

6.1.6 Additional Analysis and Updated Ranking

The Preliminary Draft Report was presented and reviewed with the Technical Working Group (TWG) on December 17, 2021. A copy of the report was made available following the meeting and input was requested from members of the TWG during a comment and review period.

Both during the TWG presentation as well as in the weeks following the meeting, members of the TWG offered information and insight suggesting that additional factors be considered under the preliminary ranking. The consulting team agreed to review these items to further develop the assessment contained in the report and to review any potential impact to the parcel or parcel group ranking scores.

Key elements of this additional analysis that impacted the final scoring and parcel or parcel group rankings are as follows:

1. At the request of the Collier-Seminole State Park management team, the **2004 Unit Management Plan (UMP)** was reviewed regarding the potential for impacts to parcel / parcel groups 12, 1343 and 1443, and specifically the presence of the Rockland Hammock habitat. Rockland Hammock remains an excellent and rare example of a surviving tropical hardwood forest in southern Florida and was a primary contributing reason why the park was created. Most of the upland areas identified on parcel group 12 as well as parcels 1343 and 1443 are comprised of the Rockland Hammock habitat. Due to the unique nature of this community, all areas designated as upland with significant Rockland Hammock habitat were removed from further consideration. This action reduced the amount of available upland areas for parcel group 12, and parcels 1343 and 1443 below the minimum acreage requirement**, resulting in the removal of parcel/parcel group 12, 1343, and 1443 from further consideration**.

2. Additionally, a +/- 51-acre area (commonly referred to as the ‘bicycle seat’ due to its shape) within parcel 1207 is shown on District wetland maps as not containing uplands. The 2004 UMP however indicates this area as being one of the few areas within the park that may contain uplands, potentially exceeding 5 feet in elevation (Page 7, UMP). Additionally, the natural communities map in the UMP identifies this area as Ruderal, characterized by having the substrate of the natural community overwhelmingly altered because of human activity. This area is diked, has been previously farmed, and according to the UMP, is now dominated by exotics (Carolina Willow and Brazilian Pepper) and should be considered for restoration of a more historic flow pattern in accordance with the UMP.

   Due to the information contained in the UMP regarding the bicycle seat, **this area has now been identified as potential uplands and Parcel 1207 has been scored accordingly**. Additional information will be obtained regarding the parcel ecology in the next phase of study.

3. Parcels 1206 and the SE corner of 1475, shown as parcel group 13 on the updated parcel map below (**Figure 6-5**), were originally excluded due to the southern parcel lying within the CERP and the northern parcel not meeting the minimum size requirements. While the southern parcel lies within the CERP boundary, it lies on the westernmost edge of the CERP and is strategically located adjacent to PSRP primary flow areas. This allows for the ease of intercepting the flows from the area between the upstream farmlands and the CERP berm/dike which creates a

channeling effect for these historic flows. Its removal from the CERP should not create a functional concern for the CERP Project, provided flow to and through the existing and proposed culverts are maintained. When combined with the parcel to the north, **this parcel group totals approximately 30 acres and has therefore been included for further consideration and ranked accordingly**.

4. Additional review and analysis of Parcel groups 6 and 8, which lie in Section 16, for access and hydraulic distance was also performed. While the primary focus of the legal review to date has been the permissibility of the proposed land use on the subject parcels, under section 6.1.4.2 (page 6.10) of the report, it states "it should be noted that each title report for the Section 16 Parcels includes a notation that lack of access may be an issue."

   Also, it should be noted that most easements in Section 16 were granted for ingress and egress specifically. The use for crossing of these easements for a water quality project or the use of the existing access easements for non-resident use will need further review. Due to the number of parcels involved in the parcel groups in Section 16, access could be an issue depending on the final project siting. The access scoring for both these parcel groups should be adjusted downward if they remain in consideration for the proposed project.

   Additionally, a further review of the required hydraulic pathways for Parcel Groups 6 and 8 identified additional concerns as outlined below:

   a. Parcel Group 6 lacks a hydraulic connection to the south without securing additional parcels, most of which are currently developed with homes or horticultural operations. The inability to secure a southern outfall without impacting residentially developed parcels, combined with an uncertain and likely lengthy pathway to create a hydraulic connection from both source water and a discharge back to the existing conveyance system results in a recommendation to **remove Parcel Group 6 from further consideration**.

   b. Parcel Group 8 lies within Section 16 as well but extends the length (north to south) of the section and as such, may potentially allow for hydraulic connections to both the source water as well as conveyance for discharge. These routes however are likely to require support from adjacent property owners in securing the necessary easements to create these connection points and would be circuitous in nature. The original rankings regarding 'Hydraulic Distance' were scored using a concentric oval to gauge linear distance from the center of the project area outward. For most parcels, this form of measure was appropriate; however, for parcel groups such as those in Section 16, this measure may not be appropriate. Due to the extensive and potentially circuitous routing of both source water and discharge water that will be required, **the scoring for Hydraulic Distance for Parcel Group 8 should be adjusted downward** to the lowest end of the scale.

Based on the additional analysis performed as outlined above, a revised parcel ranking is shown below in **Table 6-7**, the changes in ranking between the prior and updated tables are shown in **Table 6-8**, the updated ranking for the final five parcel/parcel areas shown on **Table 6-9**, and the updated ranking map in **Figure 6-6**. A full-size map can be found in **Appendix I**.

Table 6-7: Updated Preliminary Parcel Ranking Matrix

Site ID Number						803	1207	1343	1443	1474	1920
Parcel Area ID	6	8	10	12	13						
Total Acreage	24.9	67.2	24.9	178.6	32.9	131.5	640.8	67.9	+/-640	48.8	330.6
No. of Individual Parcels	8	21	6	2	2	1	1	1	1	1	1
Hydraulic Distance	DNS*	1	DNS*	DNS*	7	6	7	DNS*	DNS*	DNS*	4
Presence of Contiguous Non-wetland Ar	DNS*	3	DNS*	DNS*	1**	7	3**	DNS*	DNS*	DNS*	7
Ease of Access	DNS*	3	DNS*	DNS*	7	7	6	DNS*	DNS*	DNS*	5
Land Use Restriction Level	DNS*	7	DNS*	DNS*	1	7	3	DNS*	DNS*	DNS*	5
Total Score	DNS*	14	DNS*	DNS*	16	27	19	DNS*	DNS*	DNS*	21
Updated Preliminary Ranking:	NA	**5**	NA	NA	**4**	**1**	**3**	NA	NA	NA	**2**

*DNS indicates the parcel did not score due to the site analysis discovering that the parcel lacks sufficient non-wetland acreage (greater than 15 acres) to meet the objectives of the project. These two parcels or parcel groups are thereby removed from further consideration.

** Subject to field verification.

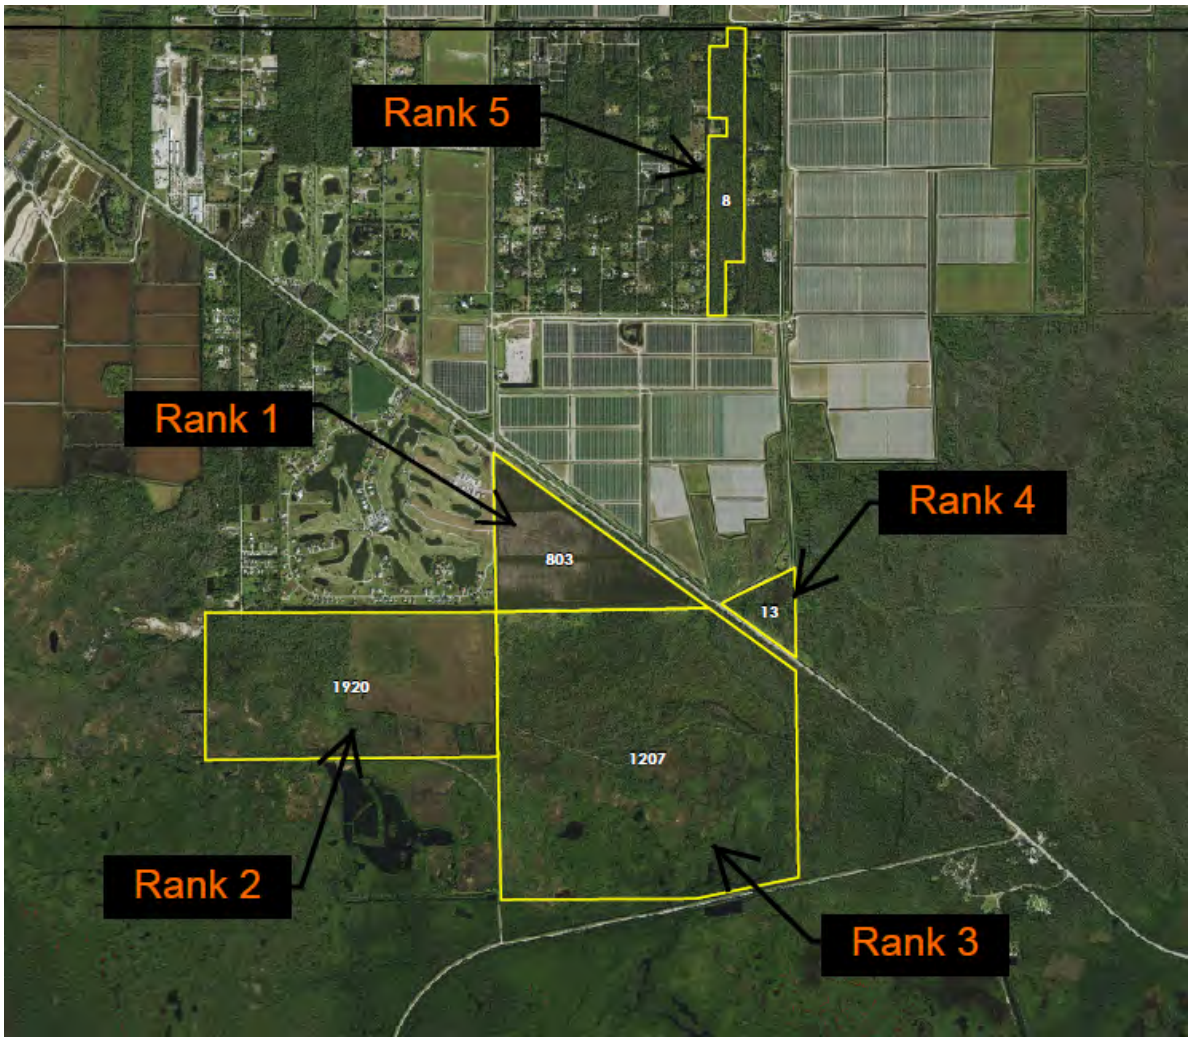

Table 6-8: Ranking Changes

Site ID Number						803	1207	1343	1443	1474	1920

6.2 SECONDARY EVALUATIVE CRITERIA

6.2.1 Secondary Evaluative Criteria Scoring Description

Following the Preliminary Parcel ranking and input from the TWG, informing a revised ranking, the remaining five parcels or parcel areas were subjected to a secondary set of evaluative criteria that will produce additional scoring and result in a final parcel or parcel group ranking. These criteria are further described in **Sections 6.2.1.1** through **6.2.1.5**.

6.2.1.1 Ecological Factors

Each parcel or parcel group was subjected to both a desktop and field analysis where possible to determine the potential for project related disturbance to protected flora or fauna. The results of the field analysis can be found in **Appendix J**. Parcels that are previously disturbed and either devoid of significant vegetation or populated with a predominance of exotics would score well in this category based on their respectively low ecological value, thereby resulting in limited disturbance of quality habitat resulting from the project. Similarly, a parcel or parcel group that supplies significant cover or forage for protected, threatened, or endangered species would score poorly in this category since disturbance of habitat that supports key species is undesirable. Since the elements of vegetative cover and suitable habitat are connected, they have been combined for scoring purposes, with parcels or parcels groups possessing greater ecological value scoring the lowest and those with limited ecological value scoring highest as shown below.

Note that, at the time of drafting this report, Stantec was not afforded permission to enter Parcel ID 803, Parcel ID 1920, half of Parcel Group ID 13, and approximately ¾ of Parcel Group ID 8. Stantec was able to walk the perimeter for these areas and obtain a reasonable amount of field information to corroborate the information collected at the desktop level. Parcel ID 1207 was the only candidate location with unfettered access. Regardless of the available access, the information presented in this report and the Appendix is sufficient for the purpose of this study. Prior to a full design an environmental assessment, including a listed species survey, should be performed. **Table 6-10** below outlines the scoring considerations for ecological factors:

Table 6-10: Ecological Factors

Score	1	2	3	4	5	6	7
Ecological Factors	Native vegetation with habitat suitable for a range of protected species		Mostly native vegetation with some habitat for protected species		Previously disturbed, dominated by exotics with miminal habitat for protected species		Distrurbed, devoid of vegetation or habitat

6.2.1.2 Capital Project Costs

Based on the schematic design provided for each parcel or parcel group reviewed in this section (**Appendix K**), a **Rough Order of Magnitude Opinion of Probable Cost (ROMOPC)** was created for each project site (**Appendix L**). Due to the varying parcel sizes and scalable nature of the selected applications, and to allow for a comparative analysis, the project size for each parcel was limited to a maximum of 35 impacted acres where possible. Project Costs (inclusive of 10 years of O&M) were also included. Land values were derived from the Collier County Property Appraisers website (**Table 6-11**). While land costs are anticipated to be substantially higher, particularly for privately owned lands where fair market value is sought, this approach allows for a more consistent comparison across all parcels for the purpose of scoring. Due to the nature of currently fluctuating material and labor costs related to project construction costs, these estimates should be further validated during design. Due to the property being currently under ownership by the State of Florida, there are likely no acquisition costs for public lands for this public use. The methods required to use the land will be dependent on whether the land is being leased by the Park, authorized to use, or allowed through an agreement. Considering these factors, **Table 6-12** below outlines the scoring for each.

Table 6-11: Land Values from the Collier County Property Appraisers Website

Parcel/Parcel Area	Land Value ($/ac)
8	$16,000
13	$8,347*
803	$8,347
1207	$0
1920	$33,625

*Parcel Area 13 includes both privately owned and publicly held areas. The land value used for the public portion was $0.

Table 6-12: Capital Cost

Score	1	2	3	4	5	6	7
Capital Cost ($MM)	38 to 36	36 to 34	34 to 32	32 to 30	30 to 28	28 to 26	26 to 24

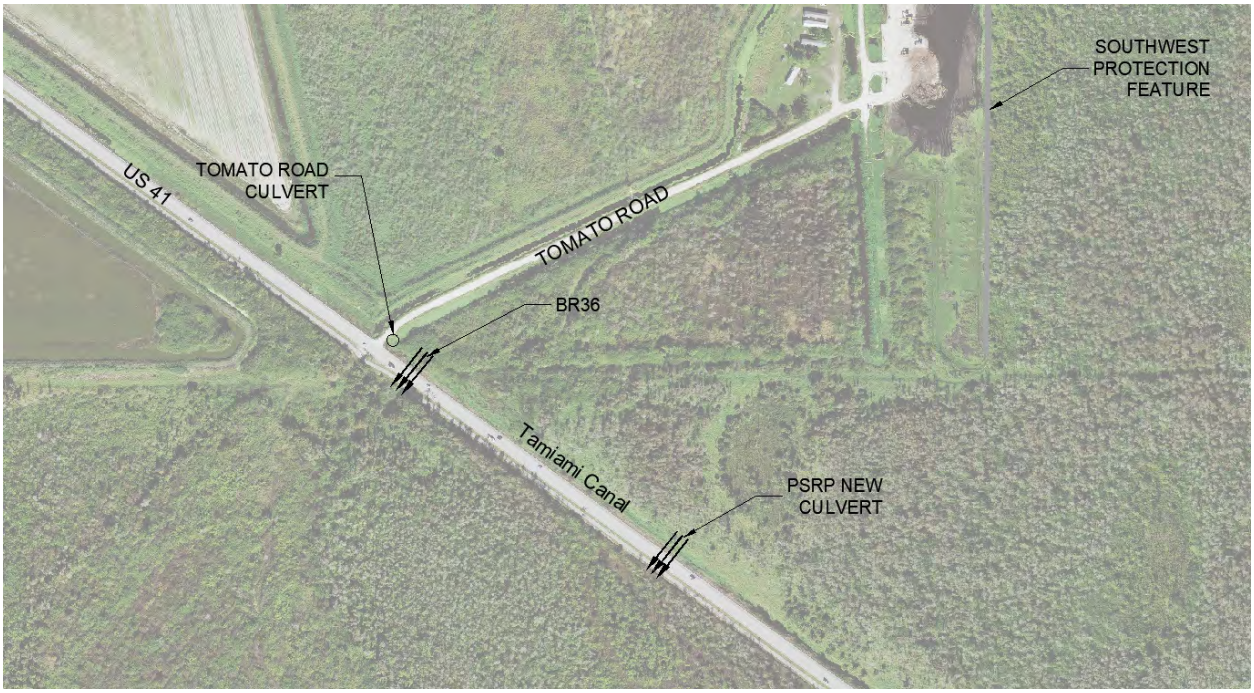

6.2.1.3 Water Quality Benefit

The recommended treatment sequence presented in the Picayune Watershed Water Quality Feasibility Study (Stantec, 2021) was an initial sedimentation basin following by a series of free water/surface flow wetlands. Schematic designs were further developed for each parcel and/or parcel group based upon this treatment sequence and initial sizing per the Feasibility Study (**Appendix K**).

The use of modeling for this report was performed at a preliminary and conceptual level. Model inputs were consistently applied to each parcel to determine if the site location was appropriate and feasible. This was the extent of which the modeling exercise was applied. Once a final parcel is selected and a design advances, modeling should be refined to reflect site specific conditions including water balance considerations, discharge flows/concentrations, and overall impact to the water quality within the downstream OFWs.

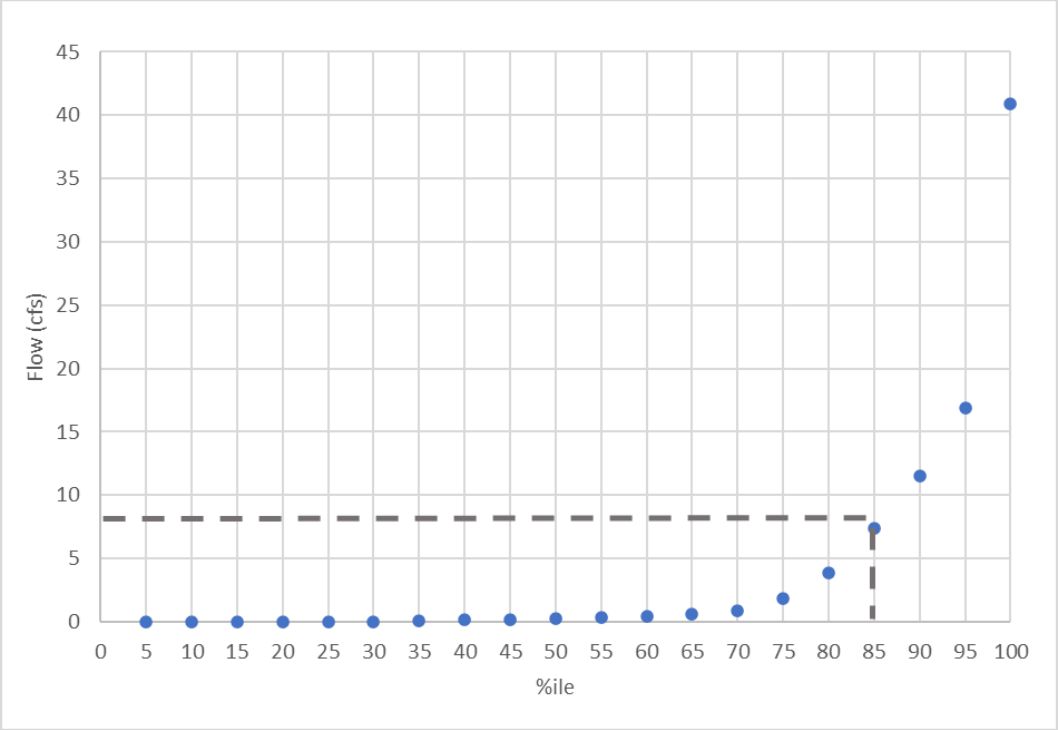

Assumed daily flow was developed based upon preliminary hydraulic modeling of the Tamiami Canal from 2005 through 2013 conducted by Lago Consulting & Services, LLC (Lago; subconsultant to Stantec) utilizing MIKE SHE (**Appendix M**) and correlated to the existing and future conditions (post PSRP) reported by the regional model (SFWMD, 2020). Daily flow within the Tamiami Canal from the area between Tomato Rd and the new PSRP culverts (**Figure 6-7**) was reviewed to identify a feasible pumping rate to intercept and divert surface water from the canal to the candidate treatment parcel(s) as per the preliminary sizing and sequence identified in the WQFS.

Figure 6-7: Focused Modeling Location

The following **Figure 6-8** provides a summary of the modeled percentile statistics for daily flow. Based upon the model predictions, a peak pumping rate of 8-cfs (average 1.85-cfs) would capture approximately 85 percent of the peak flows projected post PSRP within the canal in this area.

Figure 6-8: Percentile Occurrence Projected Daily Flows post PSRP at Tamiami Canal

Based upon the peak pumping rate of 8-cfs, the initial sedimentation basin in each treatment parcel (with the exception of Parcel 13 due to space restrictions) was sized to capture the pumped flow and detain the flow within the basin's extended detention (i.e., freeboard above MHW) for a minimum of 24 hours.

Assumed influent water quality to each treatment parcel was based upon the monthly water quality projections for nitrogen and phosphorus from 2004 through 2013 predicted in the Tamiami Canal in the PSRP Water Quality Projections with Southwestern Protective Levee Feature report which were based upon the South Florida Water Management District's DBHYDRO database (SFWMD, 2020). Please note, additional water quality sampling should be conducted comparing dry weather and wet weather flow to confirm the peak pump rate to capture the desired flow for treatment (i.e., flow at 15-cfs may be too diluted from storm flow to warrant treatment),

Preliminary estimates for performance of the treatment wetlands per each schematic were calculated utilizing the modified first-order P-k-C* model which takes into consideration hydraulic loading rate (HLR), non-ideal flow, background concentration, and pollutant weathering (Kadlec and Wallace, 2009).

$$\left(\frac{Co - C^*}{Ci - C^*}\right) = \frac{1}{(1 + k/P\,q)^P}$$

Where:
C_0 = outlet concentrations, mg/L
C_i = inlet concentration, mg/L
C* = background concentration, mg/L
k = modified first-order areal rate coefficient, m/d
P = apparent number of tanks-in-series (TIS), dimensionless
q = hydraulic loading rate, m/d

Predicted performance of the treatment sequences on each alternative parcel was based upon published design and modeling parameters (Kadlec and Wallace, 2009) and operational data from similar systems, many of which are located in Florida (Wetland Solutions, 2012; Bays and Bishop, 2014; Griffiths, 2017; Kadlec, 2016). Daily water quality leaving the treatment wetlands on each parcel was determined based upon the total area of wetlands, hydraulic loading, and assumed water quality entering the parcel.

One critical factor for site selection is dependent upon the achievable Water Quality Benefit for each parcel or parcel area. Parcels or parcel groups that provide the greatest mass nutrient removal will score highest, where parcels with the least mass removal will score poorly. Parcels were scored individually for each nutrient, with an overall average for the combined mass removal score. **Table 6-13** below outlines the scoring for each:

Table 6-13: Water Quality Benefit

Score		1	2	3	4	5	6	7
Water Quality Benefit	Nitrogen (lbs/yr)	1200 to 1250	1250 to 1300	1300 to 1350	1350 to 1400	1400 to 1450	1450 to 1500	>1500
	Phosphorus (lbs/yr)	<300	300 to 320	320 to 340	340 to 360	360 to 380	380 to 400	>400

6.2.1.4 Potential Public Use / Public Asset

Due to the interrelated nature of how human impacts are direct drivers of water quality for downstream systems, having the ability to include an educational component as part of the project may hold significant value, leveraging the project itself to educate, inform, and ultimately influence behaviors that will help reduce the potential for point source pollution that ultimately impacts our water quality should be a priority.

To this end, parcels or parcels groups that are well situated to provide for public use in the form of access, education, and recreation will score more highly in this area, where parcels that are more isolated and have access difficulties associated with them will score poorly. **Table 6-14** below outlines the scoring for each:

Table 6-14: Potential Public Use / Public Asset

Score	1	2	3	4	5	6	7
Potential Public Use Public Asset	Isolated parcel(s) with limited opportunity for access and / or public use		Access available but limited room for public access or parking		Public access is available and parcel(s) can provide for a range of uses		Parcel(s) located adjacent to or within public access areas currently

6.2.1.5 Willing Seller / Ease of Acquisition

A determination has not been made regarding the use of eminent domain for any of the identified parcels contained in this report, but an effort that requires additional time and funding in order to secure the land necessary for a project will take away from the available funding that would otherwise go toward design and implementation of the proposed water quality project(s). For these reasons, if a parcel is privately owned and the owner has expressed that they choose not to work with the District in locating a project on their property, that parcel or parcel group would score on the lower end of the scale. However, lands that are currently in public ownership and have minimal costs associated with acquisition or dedication for the proposed project would score well. Parcels that require cooperation and action of agencies outside the State of Florida, such as Federal land use changes or approvals outside the customary permitting agencies would score below those without such limitations or restrictions. **Table 6-15** below outlines the scoring for each:

Table 6-15: Willing Seller / Ease of Acquisition

Score	1	2	3	4	5	6	7
Willing Seller / Ease of Acquisition	Private ownership, no desire to sell or convey property		Private ownership, unresponsive to requests for access		Public Lands but with restrictions to be addressed		Public Lands with no restrictions related to the proposed use

6.2.2 Specific Parcel / Parcel Area Secondary Evaluation

6.2.2.1 Site ID Number 803

Figure 6-9: Site ID 803 Location Map

Ecological Factors

This property was 100% fallow agricultural land at the time of the site walk. However, obvious plant rows, raised beds and drainage / irrigation swales and canals were present. The outfall pipes did not have pumps connected but there was evidence of a recent discharge from this property onto the parcel ID #1207, the state lands, located immediately to the south. The groundcover appeared to be primarily herbaceous with dense torpedo grass and other incidental species. The entire field could be chemically treated to quickly eliminate the undesirable species if this site were used as part of the restoration project.

Figure 6-10: Northern Panoramic View from SE Corner Berm

Florida panther could potentially use this site in limited capacity due to the absence of any significant shrubby or forested habitat. Wading bird species may forage in the old ditches / swales seasonally, but it is not regionally significant habitat. Other listed species' potential use of this parcel would be low due to the highly disturbed nature of the site and lack of any significant natural habitat. **Appendix J** includes additional pictures for this location.

Schematic Design

Surface water pumped from the Tamiami Canal to Parcel 803 (**Figure 6-11**) will first enter an 8-acre sedimentation basin for removal of suspended solids and the contaminants adsorbed to those suspended particles. The sedimentation basin will reduce velocities and provide quiescent conditions that enhance the removal of suspended solids. Heavier sediments will drop out as water passes through the basin, while lighter sediments will settle out as the runoff is retained in the permanent pool. Initial sedimentation in the basin will enhance treatment performance, reduce maintenance, and increase the longevity of the subsequent treatment practices.

Discharge from the sedimentation basin would flow into a series of free water / surface flow treatment wetlands (23 acres) designed for further removal of suspended sediments plus removal of dissolved contaminants (e.g., orthophosphate, ammonia, nitrate) through filtration, adsorption, and biological degradation processes.

Figure 6-11: Site ID 803 Schematic Design

Note: This image is not scaled. The full-size schematic design for this location can be found in **Appendix K**.

The treatment wetlands include a combination of open water ponds and shallow marshes. The open water ponds will help distribute flow evenly across each subsequent shallow marsh to prevent short-circuiting and thus maximize the treatment performance of the marshes. Fine sediment will settle out in the open water ponds while dissolved contaminants will be removed in the shallow marshes through the filtering and trapping of fine particles and soluble pollutants (i.e., metals, organics, and nutrients). The marsh plants will also stabilize the sediments, prevent scouring, and resuspension during high flows. Discharge from the treatment wetlands would be discharged west to an existing drainage feature.

Capital Project Costs (including 10-year O&M estimate)

Capital Project Costs are roughly estimated here to be $26,022,000, as shown in **Table 6-16** below. Part of this estimate is land acquisition costs since the parcel is privately owned. For consistency, land values for this calculation are derived from the Collier County Property Appraisers website. While land costs are anticipated to be substantially higher for this parcel, this allows for a more consistent comparison for the purpose of ranking all parcels. For this parcel, a project size of 42 acres was assumed which would allow for the application of significant treatment options but also allow for relative comparisons to other parcels from both a project cost and treatment effectiveness standpoint. A more detailed summary is included in **Appendix L**.

Table 6-16: Site ID 803 ROMOPC

Parcel ID 803	
Land Acquisition	$353,000
Survey, Permitting & Design	$2,681,000
Construction	$19,151,000
Construction Oversight	$1,915,000
O&M (10-Years)	$1,922,000
Total Estimated Cost	**$26,022,000**

Water Quality Benefit

The treatment sequence of an 8-ac sedimentation basin following by a 23-ac treatment wetland constructed on Parcel 803 will reduce average total nitrogen concentrations from 1.44 mg/L to 0.64 mg/L, resulting in the average removal of 1,440-lbs of nitrogen per year. Similarly, total phosphorus concentrations will reduce from 0.267 mg/L to 0.041 mg/L, resulting in the average removal of 385-lbs of phosphorus per year as shown on **Table 6-17**. The modeling tech memo and supporting water quality calculations can be found in **Appendix M**.

Table 6-17: Summary of Average Water Quality Modeling for Treatment Sequence on Site ID 803

Items	Total Nitrogen	Total Phosphorus
Influent (mg/L)	1.44	0.267
Effluent (mg/L)	0.64	0.041
Mass Removed (lbs per year)	1440	385

Potential Public Use / Public Asset

While Parcel ID 803 has good access from US 41, for lands to be made available for public use, additional lands for access and parking beyond those being utilized for the project would have to be required. The site itself is therefore considered to have limited access opportunities. The site is adjacent to Collier Seminole State Park which could allow for the extension of public access and facilities from the park but no facilities within the park that would indicate future access are planned at this time.

Willing Seller / Ease of Acquisition

During this analysis, the property owner for this parcel has indicated that they are not willing to sell any lands to be utilized for this project. Should the District choose to proceed with a project on this parcel, it could require a taking, which if successful, would potentially add significant costs to the project and extend the timeframe out considerably as well.

6.2.2.2 Site ID Number 1207

Figure 6-12: Site ID 1207 Location Map

Ecological Factors

This property contains a large area that was previously farmed but has been fallow for years. It has revegetated with a dense mixture of nuisance and exotic species with few desirable native species throughout. Cattails, willow, primrose willow, torpedograss, Old World Climbing Fern, swamp fern and Boston fern, scattered cabbage palms, red maple saplings and strangler fig make up the dominant species with numerous other incidental species present in the groundcover. Brazilian pepper is scattered to abundant throughout this old farm field becoming very dense along the disturbed edges.

Figure 6-13: View of Old Farm Field (Bicycle Seat)

The recreational central trail creates an impediment to sheet flow which generally tries to flow south. There are several culverted / bridged passages under the central trail to allow water to pass without damaging it. The majority of the property north of the central trail is dominated by pine flatwoods and hydric pine communities. There are numerous palmetto islands within the pine forest habitats, and they are scattered throughout the other pine communities with little or no understory. Grasses are abundant, and there are numerous rocky outcroppings where the limerock is close to the surface. The northeastern corner of this part of the property contains a forested cypress community which makes up the western quarter of this part of the site. The cypress are replaced by pine reaching the central trail where it meets the western property boundary. Brazilian pepper is scattered throughout but is more abundant around the edges along the cleared perimeter maintenance trail / fire break. Scattered melaleuca and Old-World climbing fern were also present in notable numbers.

Figure 6-14: North View from Central Trail

South of the central trail the pines are abundant in the northern part of the property and palmetto islands are scattered, but not as abundant as in the north. This part of the site also has several sawgrass dominated depressional wetlands that are interconnected and provide a natural path for sheet flow to move south through this part of the site. Cypress are present as scattered trees within the hydric pine communities south of the central trail but are not very abundant. Brazilian pepper is present throughout, but not problematic. However, a controlled burn had recently been performed on this area south of the central trail and many of the shrubby species were not recognizable due to the fire damage.

Figure 6-15: South View from Central Trail

Farther to the south, and north of the roadway along the southern boundary of this site mangroves become a significant part of the vegetative community. There are several deeper ditches, creeks, canals throughout this part of the site which are interconnected. These waterways are interconnected and eventually collect most of the water flowing through the site and direct it under the bridged crossing at the

roadway on the southern end of the site. Brazilian pepper has heavily invaded these mangrove wetlands and is abundant throughout the general area. Access into this southern habitat was limited by the canals / waterways so some of these observations were made from a distance and using aerial photos on Google Earth.

Figure 6-16: Northern View from San Marco Road

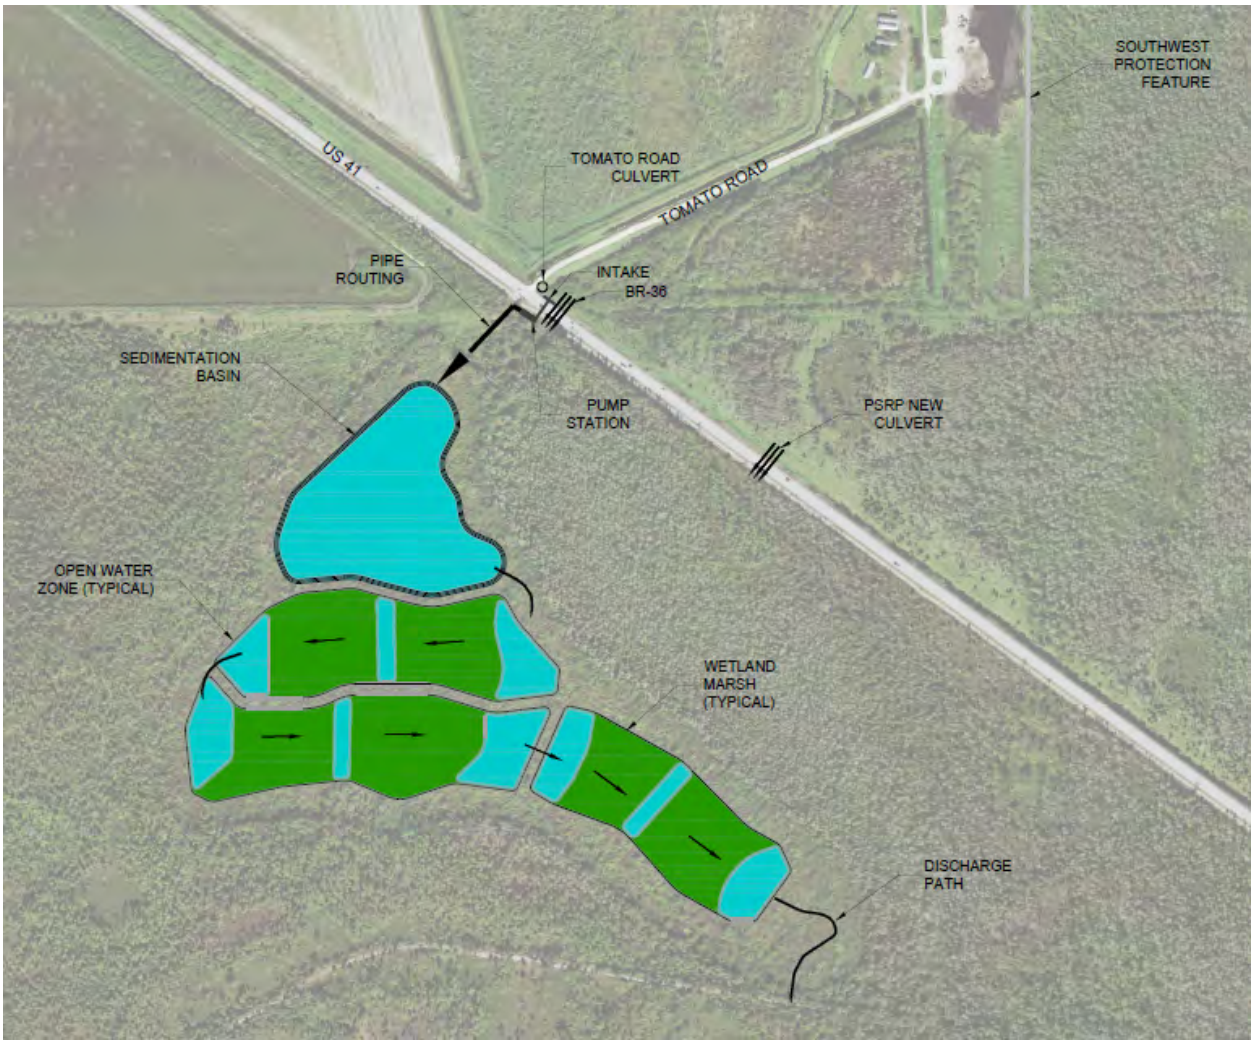

Generally, the center of the northern part of the site is higher and water finds its way to the east and west to move south. There are low areas throughout the site that may seasonally have shallow running water but it's difficult to identify those at this time of the year. The site will tolerate sheet flows in most areas, but care must be taken so the hydrology isn't increased enough to stress or kill the abundant pines throughout the northern half of the site. There are enough natural flow ways that added sheet flows could be accommodated without significantly altering the vegetative communities. The fallow farm field found in the northern end of this state lands site has little to no potential for listed species use due to the extensive growth of nuisance and exotic vegetation throughout this general area. There are very few trees present and the groundcover growth is very dense.

The remainder of the state lands property is managed using fire and periodic exotic maintenance events resulting in a property with moderate to good potential for use by listed species. Big cypress fox squirrel, Florida panther, Florida bonneted bat would have moderate to good potential to be present on the property. Red cockaded woodpecker would have fair to moderate potential to be present in the pine dominated habitats but the new growth pine habitat with sapling to small pines present in dense numbers is lacking throughout the general area. The high caprock and high summer water table limit the potential for gopher tortoises to be present; however, it was noted that a burrow study was performed in 2020 which identified both abandoned and potentially occupied burrows south of the fallow farm field. The canals and open water ways in the southern end of the property would supply suitable seasonal forage / roosting / nesting habitat for many species of listed wading birds. Wood stork forage habitat is present in several areas throughout the southern section of the site. **Appendix J** includes additional pictures for this location.

Schematic design

Surface water pumped from the Tamiami Canal to Parcel 1207 will first enter an 8-acre sedimentation basin (**Figure 6-17**) for removal of suspended solids and the contaminants adsorbed to those suspended particles. Discharge from the sedimentation basin would flow into a series of three free water / surface flow treatment wetlands (total 23 acres) designed for further removal of suspended sediments plus removal of dissolved contaminants through filtration, adsorption, and biological degradation processes. Discharge from the treatment wetlands would be discharged southeast to existing drainage features.

Figure 6-17: Site ID 1207 Schematic Design

Note: This image is not scaled. The full-size schematic design for this location can be found in **Appendix K**.

Capital Project Costs (including 10-year O&M estimate)

Capital Project Costs are roughly estimated here to be $24,399,000, as shown in **Table 6-18** below. Due to the property being currently under ownership by the State of Florida, there are likely no acquisition costs for public lands for this public use. The methods required to use the land will be dependent on whether the land is being leased by the Park, authorized to use, or allowed through an agreement. All other anticipated costs are outlined below, and a more detailed summary is included in **Appendix L**.

Table 6-18: Site ID 1207 ROMOPC

Parcel ID 1207	
Land Acquisition	$0
Survey, Permitting & Design	$2,543,000
Construction	$18,165,000
Construction Oversight	$1,817,000
O&M (10-Years)	$1,874,000
Total Estimated Cost	**$24,399,000**

Water Quality Benefit

The treatment sequence of an 8-ac sedimentation basin followed by a 23-ac treatment wetland constructed on Parcel 1207 will reduce average total nitrogen concentrations from 1.44 mg/L to 0.64 mg/L, resulting in the average removal of 1,4930-lbs of nitrogen per year. Similarly, total phosphorus concentrations will reduce from 0.267 mg/L to 0.042 mg/L, resulting in the average removal of 381-lbs of phosphorus per year as shown on **Table 6-19**. The modeling tech memo and supporting water quality calculations can be found in **Appendix M**.

Table 6-19: Summary of Average Water Quality Modeling for Treatment Sequence on Site ID 1207

Items	Total Nitrogen	Total Phosphorus
Influent (mg/L)	1.44	0.267
Effluent (mg/L)	0.64	0.042
Mass Removed (lbs per year)	1430	381

Potential Public Use / Public Asset

The entirety of parcel 1207 lies within the Collier Seminole State Park, and the project area in a location sometimes referred to as the 'bicycle seat' lies in near proximity to the Prairie Hammock Trail/Off Road Bike & Hiking Trail, a 3.5-mile trail suitable for either biking or walking. The trail head is along highway 41, about 0.7 miles west of the main park entrance gate and as such, provides ample opportunity for the project area to serve as an extension to this trail, providing for increase recreational and educational opportunities.

Willing Seller / Ease of Acquisition

Since the proposed project area lies within a State Park, there would be minimal land acquisition costs as compared to a private land purchase. Use of the bicycle seat area may however warrant a modification to the 2004 approved Unit Management Plan by the Florida Department of Environmental Protection.

6.2.2.3 Site ID Number 1920

Figure 6-18: Site ID 1920 Location Map

Ecological Factors

The eastern half of this property consists of fallow agricultural land and improved pasture that is vegetated by Bahia grass, broomsedge, and various other herbaceous species. The southern section of this old agricultural habitat is being overrun by wax myrtle and other shrubby species due to lack of mowing / grazing. The eastern half of the site appears to be vegetated by both upland and wetland species based upon aerial interpretation of the vegetation. The wetlands include cypress, red maple, cabbage palms and other incidental species. It appears from observations at the northern property line that Brazilian pepper, java plum and old-world climbing fern have heavily invaded significant areas within both the wetland and upland communities on site, especially around the perimeter and disturbed portions of the site. The uplands are vegetated by a mixture of slash pine, cabbage palm and scattered oaks with

wax myrtle / salt bush in the understory. Brazilian pepper and java plum have heavily invaded these communities.

Figure 6-19: Western View into Property

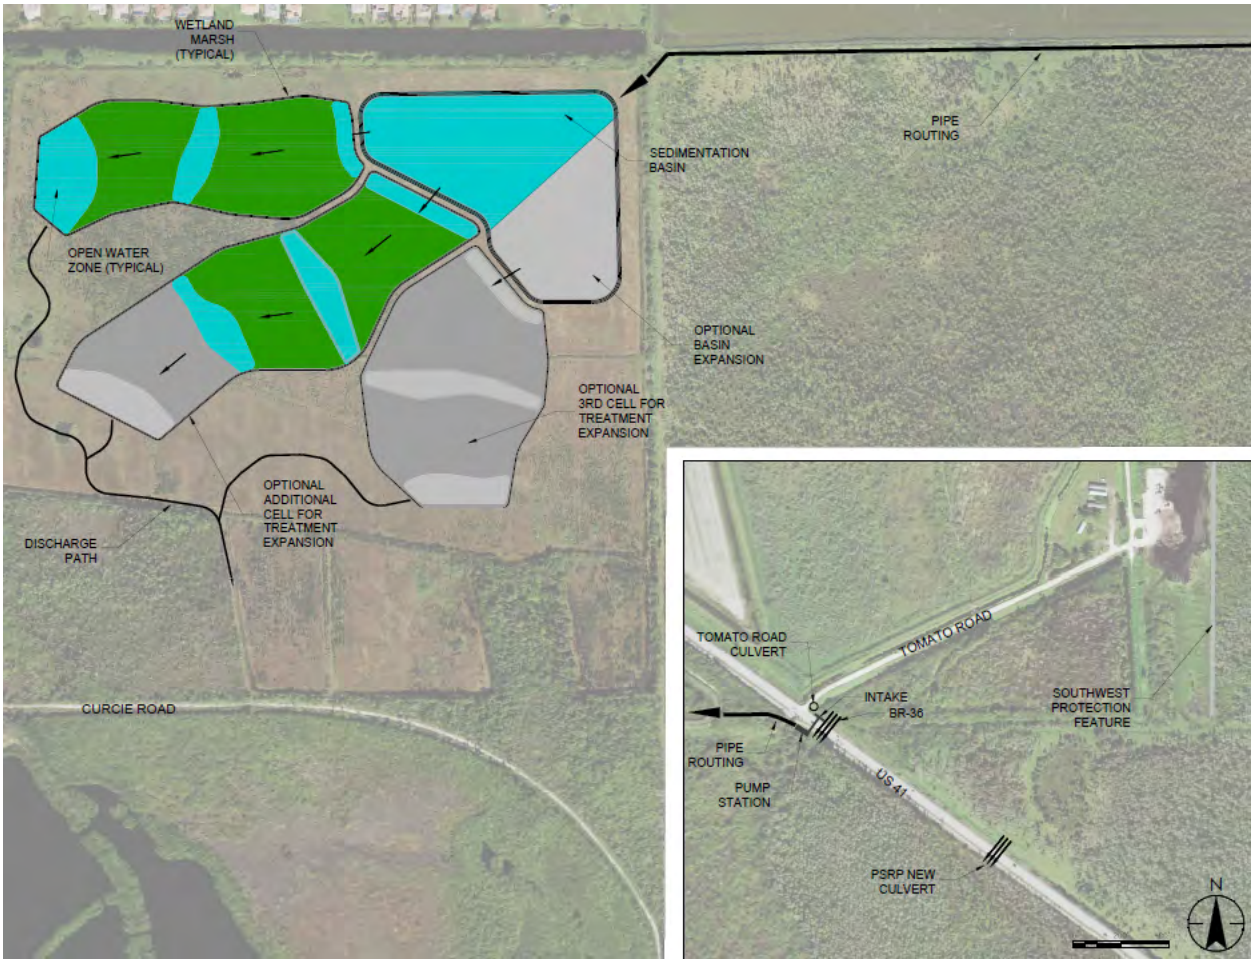

Listed species' use of this parcel would be marginal in the old agricultural lands due to the absence of suitable native habitat. The crested caracara may have marginal potential for use of the old farm fields if cabbage palms are present along the perimeter of the fields or on the edge of the forested habitats. The eastern section of the site could potentially be used by big cypress fox squirrel, Florida panther, Florida bonneted bat, and red cockaded woodpeckers could be present in the large pines along the eastern side of the site, but there is limited suitable forage habitat in the general area. The eastern half of this parcel contains little panther conservation value, and this area could be redesignated. **Appendix J** includes additional pictures for this location.

Schematic design

Surface water pumped from the Tamiami Canal to Parcel 1920 will first enter an 8-acre sedimentation basin (**Figure 6-20**) for removal of suspended solids and the contaminants adsorbed to those suspended particles. Discharge from the sedimentation basin would flow into two parallel free water / surface flow treatment wetlands (total 23 acres treatment wetlands) designed for further removal of suspended sediments plus removal of dissolved contaminants through filtration, adsorption, and biological degradation processes. Discharge from the treatment wetlands would be discharged south to existing drainage features. Due to the size of the open area, optional expansions to the treatment system are also shown on the below schematic design.

Figure 6-20: Site ID 1920 Schematic Design

Note: This image is not scaled. The full-size schematic design for this location can be found in **Appendix K**.

Capital Project Costs (including 10-year O&M estimate)

Capital Project Costs are roughly estimated here to be $27,867,000, as shown in **Table 6-20** below. Part of this estimate is land acquisition costs since the parcel is privately owned. For consistency, land values for this calculation are derived from the Collier County Property Appraisers website. While land costs are anticipated to be substantially higher, this allows for a more consistent comparison for the purpose of ranking. For this parcel, a project size of 40 acres was assumed which would allow for the application of significant treatment options but also allow for continued and future land uses on the balance of the property. All other anticipated costs are outlined below, and a more detailed summary is included in **Appendix L**.

Table 6-20: Site ID 1920 ROMOPC

Parcel ID 1920	
Land Acquisition	$1,346,000
Survey, Permitting & Design	$2,789,000
Construction	$19,921,000
Construction Oversight	$1,992,000
O&M (10-Years)	$1,819,000
Total Estimated Cost	**$27,867,000**

Water Quality Benefit

The treatment sequence of an 8-ac sedimentation basin following by a 23-ac treatment wetland constructed on Parcel 1920 will reduce average total nitrogen concentrations from 1.44 mg/L to 0.64 mg/L, resulting in the average removal of 1,432-lbs of nitrogen per year. Similarly, total phosphorus concentrations will reduce from 0.267 mg/L to 0.042 mg/L, resulting in the average removal of 381-lbs of phosphorus per year as shown on **Table 6-21**. The modeling tech memo and supporting water quality calculations can be found in **Appendix M**.

Table 6-21: Summary of Average Water Quality Modeling for Treatment Sequence on Site ID 1920

	Total Nitrogen	Total Phosphorus
Influent (mg/L)	1.44	0.267
Effluent (mg/L)	0.64	0.042
Mass Removed (lbs per year)	1432	381

Potential Public Use / Public Asset

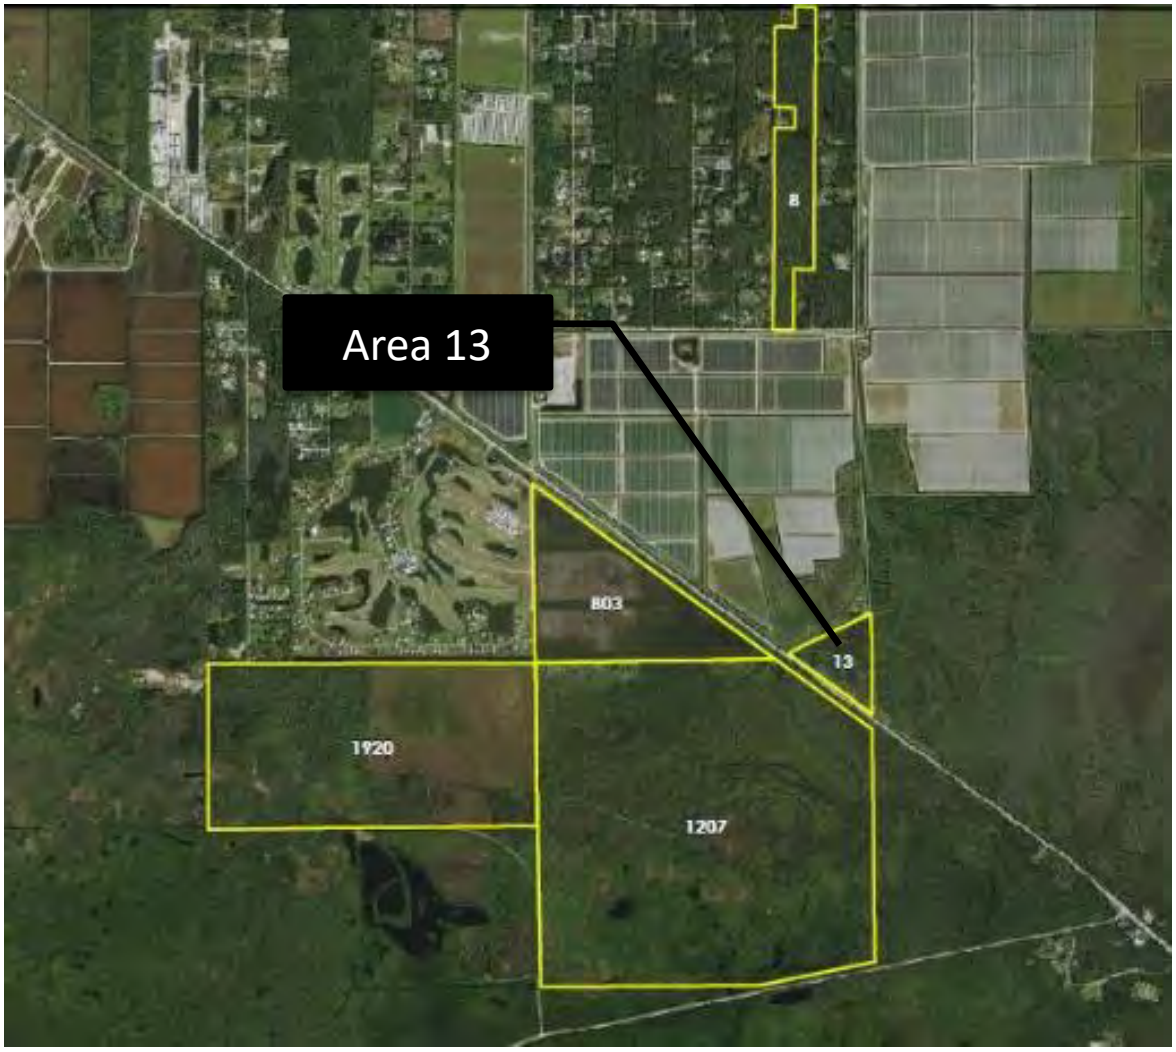

The portion of the parcel that would be utilized for this project is isolated to the point that an access easement from the terminus of Auto Ranch Road to the project area would be required. For lands to be made available for public use, a permanent easement and additional lands would have to be required. The site itself is therefore considered to have limited access opportunities. The site is adjacent to Collier Seminole State Park which could allow for the extension of public access and facilities from the park but there are no facilities within the park that would indicate future access are planned at this time.

Willing Seller / Ease of Acquisition

The ownership of Parcel ID 1920 only recently responded to the request for access. While this action was taken too late to be included in the site observations, a perimeter-walk and desktop analysis has been utilized to evaluate the potential use for this site. While not definitive in nature, the acceptance of a request for site access would seem to indicate a willingness to at a minimum, engage with the District in further conversations. This will provide for a slightly elevated ranking score in this category.

6.2.2.4 Parcel Area ID 13

Figure 6-21: Area 13 Location Map

Ecological Factors

This parcel is dominated by cypress, scattered cabbage palms, and a few red maples with a dense understory of Brazilian pepper. The boundary along the US 41 canal is heavily invaded by exotic grasses such as torpedograss, cogon grass, and other undesirable species. The site is highly disturbed and functions as a wetland, but as shown by the dense exotic infestation throughout, it is not functioning as a healthy system. Historically this area most likely experienced a much longer and better hydroperiod. The site is currently surrounded by canals that drain the property and significantly reduce the hydroperiod. Exotic grasses are abundant along the open southern edge adjacent to US 41 and Brazilian pepper is dense throughout forming the midstory of most of the forested system.

Figure 6-22: Northern View from US 41

Potential listed species' use would be the big cypress fox squirrel (moderate due to dense exotics), Florida bonneted bat (limited due to dense exotics in the midstory and low canopy), Florida panther, wood storks and wading bird species (use would be limited to the canals around the perimeter of the property). Generally, the current heavy infestation of Brazilian pepper would limit the use of the site by most listed species. **Appendix J** includes additional pictures for this location.

Schematic design

The total treatment area on Parcel Area 13 was reduced from the original goal of 30 to 35 acres to 16-acres in order to minimize interference of flow associated with the PSRP and SWPF to the three new culverts under Route 41. Note that Parcel Area 13 is comprised of two parcels, nearly bisected east-west, with 1206 on the southern half and 1475 on the northern.

Consistent with the previous parcel scenarios, a weir will be installed within the Tamiami canal to intercept and divert surface water into a 5-acre sedimentation basin (**Figure 6-23**). In addition to surface water within the canal, water from Tomato Road and the SWPF can be diverted into the individual sedimentation ponds of the same treatment system. Excess water not captured by the basins will be safely bypassed back into the Tamiami Canal. Discharge from the sedimentation basins will flow into and through 11-acres of free water / surface flow wetlands designed for further removal of suspended sediments plus removal of dissolved contaminants through filtration, adsorption, and biological degradation processes. Discharge from the treatment wetlands would be discharged back to the canal.

Figure 6-23: Parcel Area ID 13 Schematic Design

Note: This image is not scaled. The full-size schematic design for this location can be found in **Appendix K**.

Capital Project Costs (including 10-year O&M estimate)

Parcel Area 13 is comprised of approximately 13 acres of privately owned land and approximately 20 acres of publicly owned land. Capital Project Costs are roughly estimated here to be $24,279,000, as shown in **Table 6-22** below. Part of this estimate is land acquisition costs for the 13 acres that are privately owned. For consistency, land values for this calculation are derived from the Collier County Property Appraisers website. While land costs are anticipated to be substantially higher, this allows for a more consistent comparison for the purpose of ranking. All other anticipated costs are outlined below, and a more detailed summary is Included in **Appendix L**.

Table 6-22: Parcel Area ID 13 ROMOPC

Parcel Area ID 13	
Land Acquisition	$109,000
Survey, Permitting & Design	$2,621,000
Construction	$18,722,000
Construction Oversight	$1,872,000
O&M (10-Years)	$955,000
Total Estimated Cost	**$24,279,000**

Water Quality Benefit

The treatment sequence of a sedimentation basins (total 5 ac) following by a treatment wetland (total 11 ac) constructed on Parcel Area 13 will reduce average total nitrogen concentrations from 1.44 mg/L to 0.66 mg/L, resulting in the average removal of 1,249-lbs of nitrogen per year. Similarly, total phosphorus concentrations will reduce from 0.267 mg/L to 0.049 mg/L, resulting in the average removal of 294-lbs of phosphorus per year as shown on **Table 6-23.** The modeling tech memo and supporting water quality calculations can be found in **Appendix M**.

Table 6-23: Summary of Average Water Quality Modeling for Treatment Sequence Parcel Area 13

	Total Nitrogen	Total Phosphorus
Influent (mg/L)	1.44	0.267
Effluent (mg/L)	0.66	0.049
Mass Removed (lbs per year)	1249	294

Potential Public Use / Public Asset

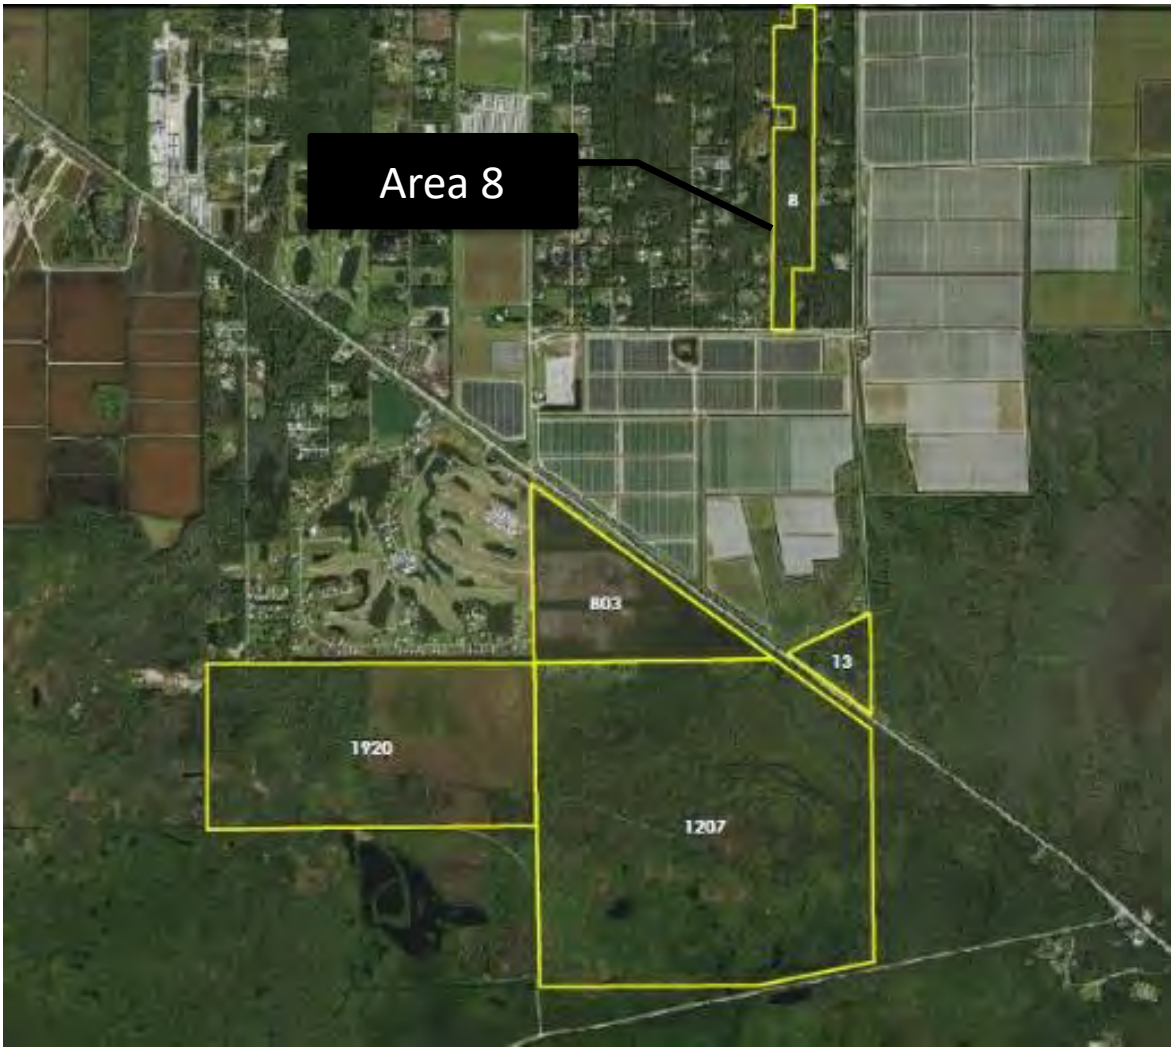

Similar to parcel 803, Parcel Area 13 has good access from US 41. However, for lands to be made available for public use, additional lands would have to be required as the area is fully utilized by the project. The site itself is therefore considered to have limited public use opportunities and is not adjacent to existing or planned park improvements.

Willing Seller / Ease of Acquisition

During the course of this analysis, the property owner for this parcel has indicated that they are not willing to sell any lands to be utilized for this project which would impact the northerly 13 acres of the parcel group (Parcel ID 1475). Should the District choose to proceed with a project on this parcel, it could require a taking which if successful would potentially add significant costs to the project and extend the timeframe out considerably as well. It should be noted however, that the southern approximately 20 acres is in public ownership (Parcel ID 1206) but also lies within the CERP boundary. Preliminary conversations indicate that this parcel can be removed from the CERP and be used for a water quality project but will require an approval process through the appropriate federal agencies.

6.2.2.5 Parcel Area ID 8

Figure 6-24: Area ID 8 Location Map

Ecological Factors

A majority of these parcels are vegetated by pine communities that are a mix of upland and wetland communities. Pine flatwood communities were abundant throughout the lots observed. The hydrology appears to have been significantly altered, but the lower elevation wetland communities are still healthy and functioning as wetlands. Brazilian pepper, java plum and melaleuca were all observed in varying densities throughout these parcels. Java plum has heavily invaded the northern end of this strip of parcels while Brazilian pepper and melaleuca are more abundant in the southern parcels. The exotics are dense enough to affecting the overall function of the habitat in this general area. Numerous bromeliad species and a few butterfly orchids were also observed on trees within these parcels. Generally, the hydrology appears to have been altered from historic conditions. The lower elevations appear to fill with water seasonally but have no obvious connections offsite. Cypress and pine wetlands were observed in the north / central and southern ends of these properties. The adjacent parcels are developed with scattered residential homes on either side of these focus parcels. Not knowing the seasonal flow direction or depth of water on these parcels presents the potential for adverse effects on adjacent parcels if the hydrology were to be changed from its present condition.

Figure 6-25: Northern View on Lager Road

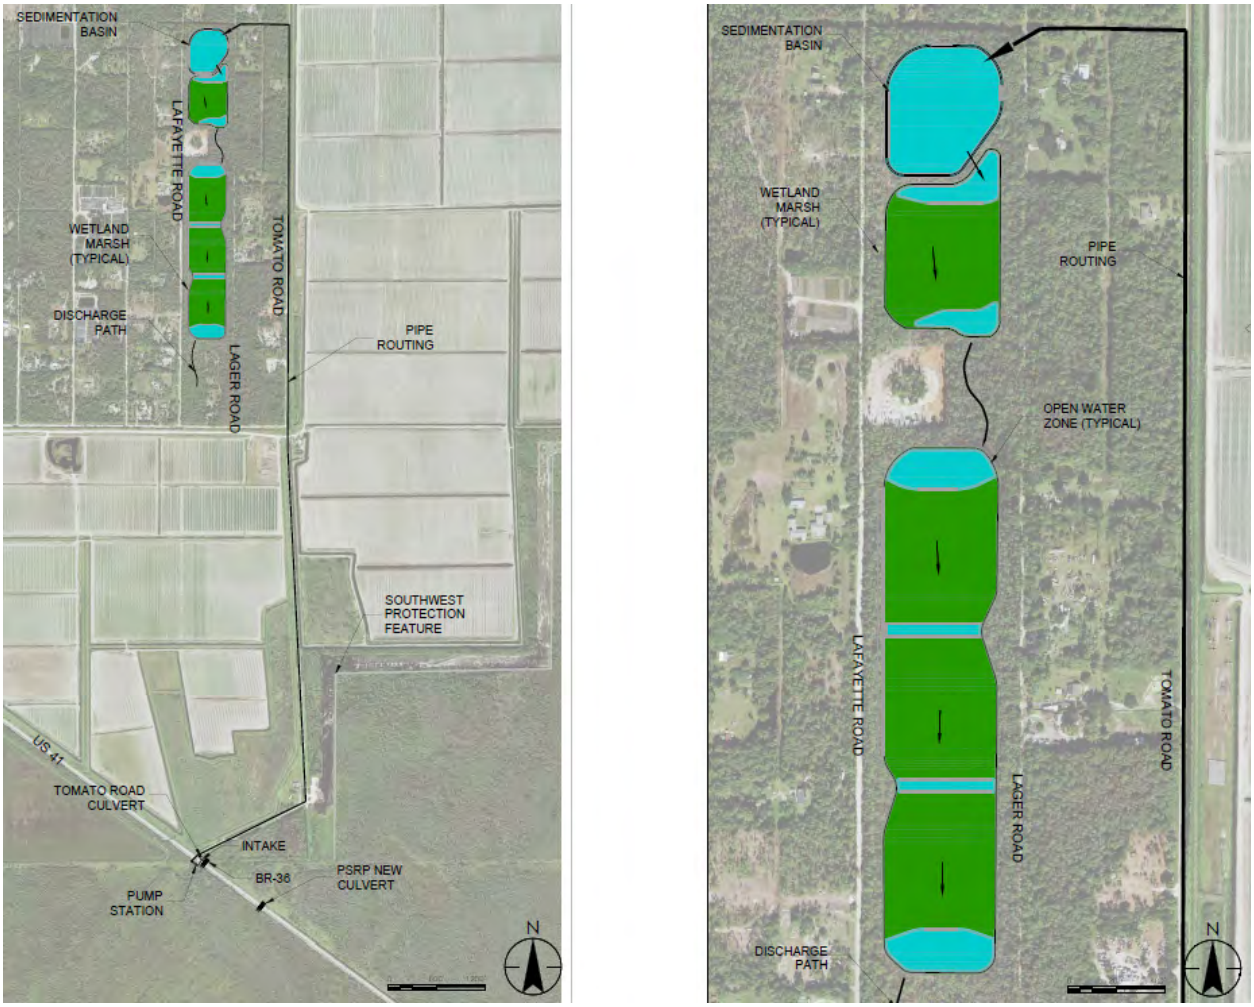

Big Cypress Fox Squirrels were observed on site and there is abundant potential habitat for Florida bonneted bat utilization within these parcels. If red-cockaded woodpeckers are anywhere in the vicinity, that species could also be present, using the pines on site as forage or cavity trees for roosting / nesting. Florida panther could also be present even though the exotic densities on site are moderate to abundant. There is limited habitat where seasonal open water would be potentially present which limits the potential for listed wading bird species (including wood storks) to be found on site. **Appendix J** includes additional pictures for this location.

Schematic design

Surface water pumped from the Tamiami Canal north to Parcel Area 8 (**Figure 6-26**) will first enter a 5-acre sedimentation basin for removal of suspended solids and the contaminants adsorbed to those suspended particles. Discharge from the sedimentation basin would flow into a series of free water / surface flow treatment wetlands (total 28 acres) designed for further removal of suspended sediments plus removal of dissolved contaminants through filtration, adsorption, and biological degradation processes. Discharge from the treatment wetlands would be discharged south to existing drainage features.

Figure 6-26: Parcel Area ID 8 Schematic Design – Source Routing

Note: This image is not scaled. The full-size schematic design for this location can be found in **Appendix K**.

Capital Project Costs (including 10-year O&M estimate)

Parcel Area 8 is comprised of approximately 67 acres of privately owned land spread across 21 individual properties. Capital Project Costs are roughly estimated here to be $37,033,000, as shown in **Table 6-24** below. Part of this estimate is land acquisition costs for the 67 acres that are privately owned. For consistency, land values for this calculation are derived from the Collier County Property Appraisers website. While land costs are anticipated to be substantially higher, this allows for a more consistent comparison for the purpose of ranking. In addition to the acquisition costs, the higher cost for this project can be attributed to the extensive routing required to move water from the source to the treatment area. All other anticipated costs are outlined below, and a more detailed summary is included in **Appendix L**.

Table 6-24: Parcel Area ID 8 ROMOPC

Parcel Area ID 8	
Land Acquisition	$718,000
Survey, Permitting & Design	$3,870,000
Construction	$27,640,000
Construction Oversight	$2,764,000
O&M (10-Years)	$2,041,000
Total Estimated Cost	**$37,033,000**

Water Quality Benefit

The treatment sequence of a 5-ac sedimentation basin following by a 28-ac treatment wetland constructed on Parcel Area 8 will reduce average total nitrogen concentrations from 1.44 mg/L to 0.63 mg/L, resulting in the average removal of 1,516-lbs of nitrogen per year. Similarly, total phosphorus concentrations will reduce from 0.267 mg/L to 0.039 mg/L, resulting in the average removal of 420-lbs of phosphorus per year as shown on **Table 6-25**. The modeling tech memo and supporting water quality calculations can be found in **Appendix M**.

Table 6-25: Summary of Average Water Quality Modeling for Treatment Sequence on Parcel Area 8

	Total Nitrogen	Total Phosphorus
Influent (mg/L)	1.44	0.267
Effluent (mg/L)	0.63	0.039
Mass Removed (lbs per year)	1516	420

Potential Public Use / Public Asset

This parcel group lies within an area with mixed residential and horticultural uses and is accessed via access easements that are recorded specifically for ingress and egress only and it is questionable whether public access to these lands for recreational purposes would be consistent with the access limitations. Therefore, this parcel group should not be considered to be available for public access and use until these potential limitations are further investigated.

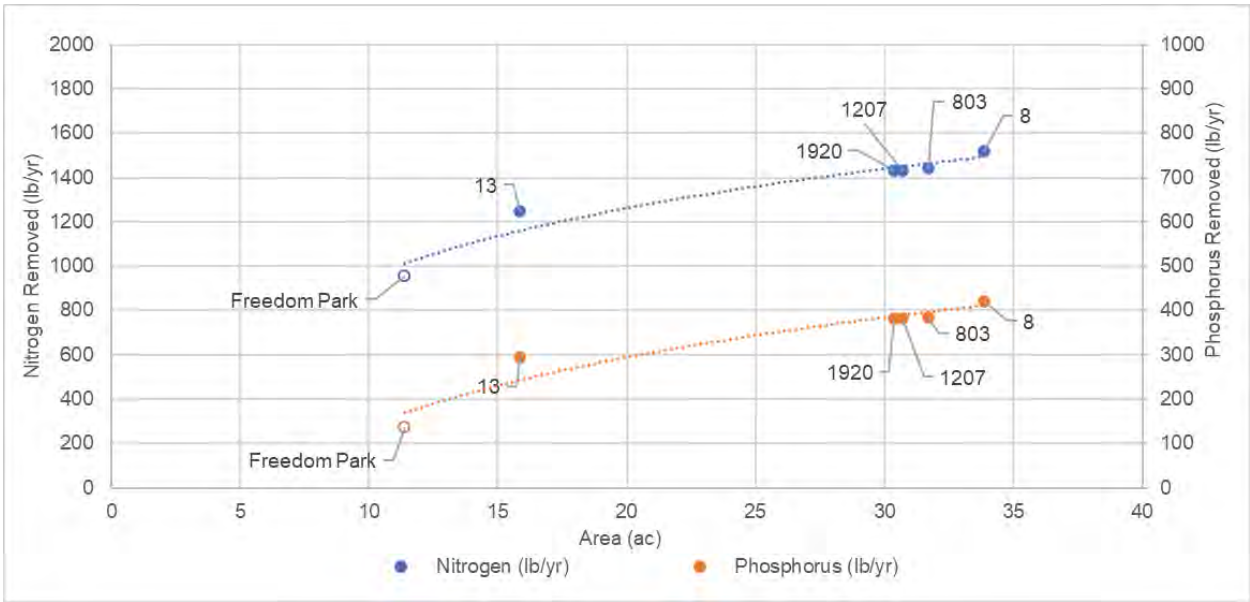

Willing Seller / Ease of Acquisition

During the course of this analysis, some of the property owners within Parcel Area ID 8 have not responded to requests for access for this stage of analysis. Additionally, during our field assessment, the presence of our ecologist was questioned by nearby residents. With the poor response to our requests for access, it is highly unlikely that all parcels necessary for this project could be acquired without the use of eminent domain which would potentially add significant costs to the project and extend the timeframe out considerably as well.

6.2.3 Treatment Efficiency and Cost Effectiveness

Mass removal of nitrogen and phosphorus from each parcel schematic are illustrated in the following **Figure 6-27**. As previously noted, the overall treatment area on Parcel 13 had to be reduced to avoid interference of flow to the new culverts under Route 41. The reduction in treatment area resulted in a reduced mass removal of nitrogen and phosphorus compared to Parcels 8, 803, 1207, and 1920. Freedom Park, a successful water quality park located in Collier County, with a treatment area of 11.4 acres, has been included for comparison as a smaller and similar treatment system.

Figure 6-27: Mass Removal vs Area

Some parcels had excess land available and therefore offered the opportunity to evaluate potential benefits of having a larger treatment sequence. The schematic for parcel 1920 was expanded to a 15.5-acre sedimentation basin followed by 46 acres of treatment wetlands which is identified as 1920+. Increasing the total treatment area improved overall nutrient removal as summarized in the following **Table 6-26** and illustrated on **Figure 6-28**. Note that of the remaining parcels and parcel areas, parcel 803 also offers the ability to expand the treatment sequence similarly to parcel 1920.

Table 6-26: Summary of Average Water Quality Modeling for Expanded Treatment Sequence on Parcel Area 1920+

	Total Nitrogen	Total Phosphorus
Influent (mg/L)	1.44	0.267
Effluent (mg/L)	0.62	0.032
Mass Removed (lbs per year)	1732	511

Figure 6-28: Mass Removal vs Area Including Expanded Treatment Sequence Parcel Area 1920+

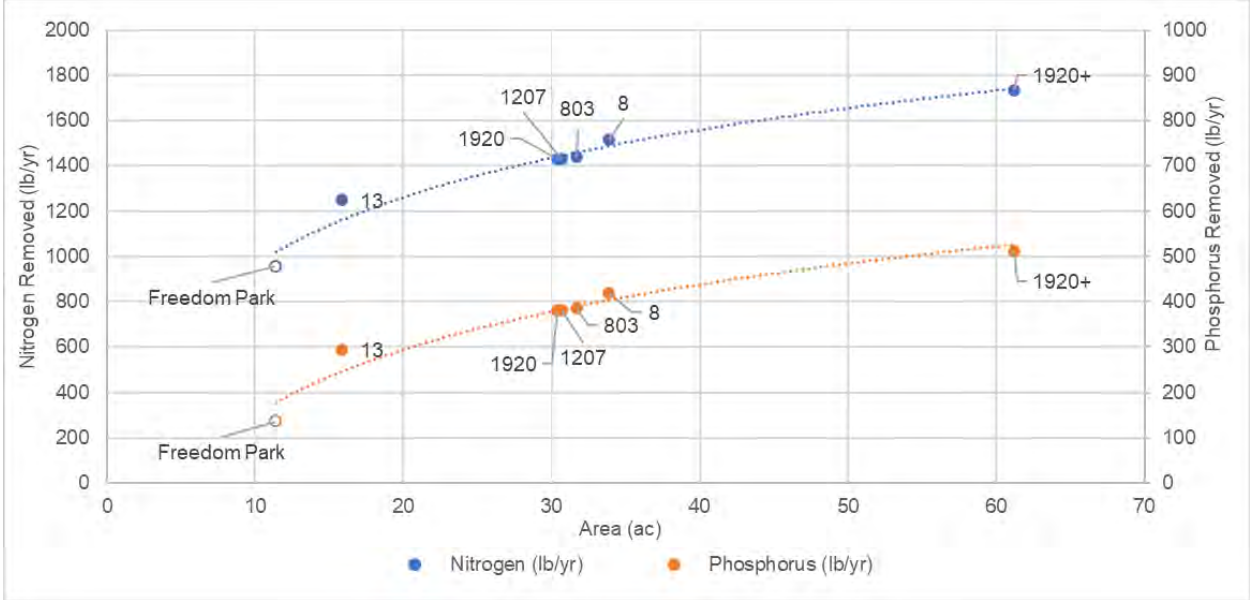

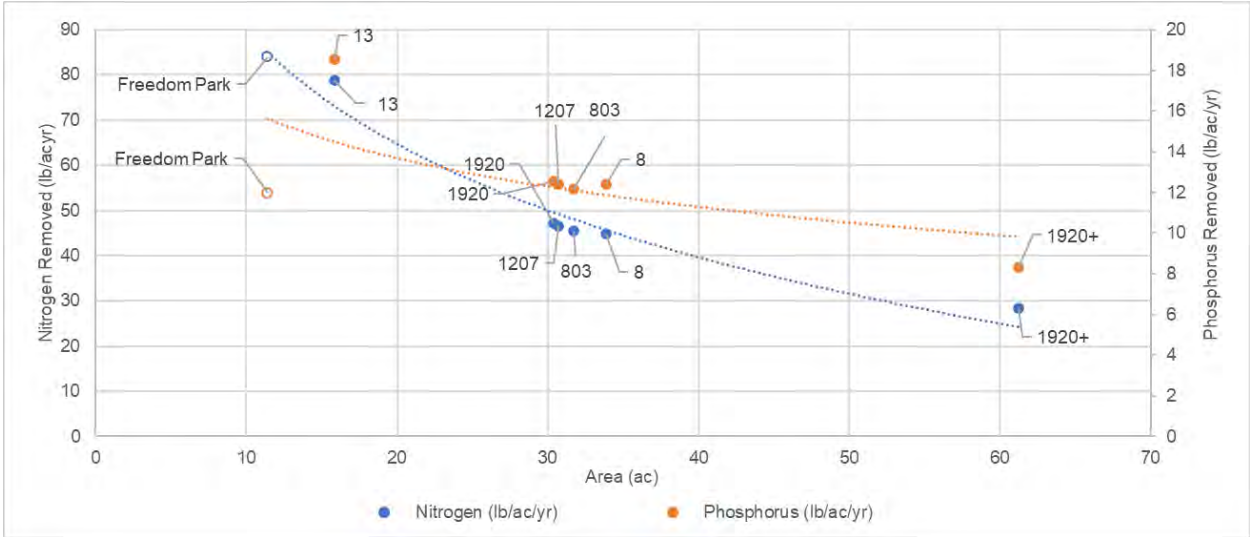

Table 6-27: Mass Removal Comparison

Items	PARCEL / PARCEL AREA						
	8	13	803	1207	1920	1920+	Freedom Park
Treatment Area (ac)	**33.85**	**15.85**	**31.7**	**30.7**	**30.36**	**61.24**	**11.4**
Total Nitrogen							
Influent (mg/L)	1.44	1.44	1.44	1.44	1.44	1.44	1.47
Effluent (mg/L)	0.63	0.66	0.64	0.64	0.64	0.62	0.87
Nitrogen Mass Removed (lbs/year)	1516	1249	1440	1430	1432	1732	956
WQ Score - Nitrogen	**7**	**1**	**5**	**5**	**5**		
Total Phosphorus							
Influent (mg/L)	0.267	0.267	0.267	0.267	0.267	0.267	0.267
Effluent (mg/L)	0.039	0.049	0.041	0.042	0.042	0.032	0.033
Phosphorus Mass Removed (lbs/year)	420	294	385	381	381	511	136
WQ Score - Phosphorus	**7**	**1**	**6**	**6**	**6**		
OVERALL WQ Score	**7**	**1**	**6**	**6**	**6**		

As previously noted in **Section 6.2.1.3** and illustrated on **Table 6-27**, larger treatment sequences afforded by larger parcels will remove more nutrient mass. However, the incremental (20% additional nitrogen mass removed and 33% additional phosphorus mass removed) benefit of the larger system required twice the land area. Therefore, overall treatment efficiency was also evaluated based upon the total mass removed per acre as illustrated in the following **Figure 6-29**:

Figure 6-29: Mass Removal Rates Normalized by Area

Based upon these results, smaller treatment solutions (e.g., Freedom Park) may be more efficient at removing nitrogen. However, it should be noted that the solutions modeled for each of the proposed parcel projects results in lower nitrogen concentrations compared to Freedom Park. While Freedom Park appears to provide more efficient nitrogen removal, higher quality discharge (lower nitrogen and phosphorous concentrations) is achieved by the proposed parcel treatment solutions.

The following **Table 6-28** provides a summary comparison of capital costs for all parcel treatment solutions.

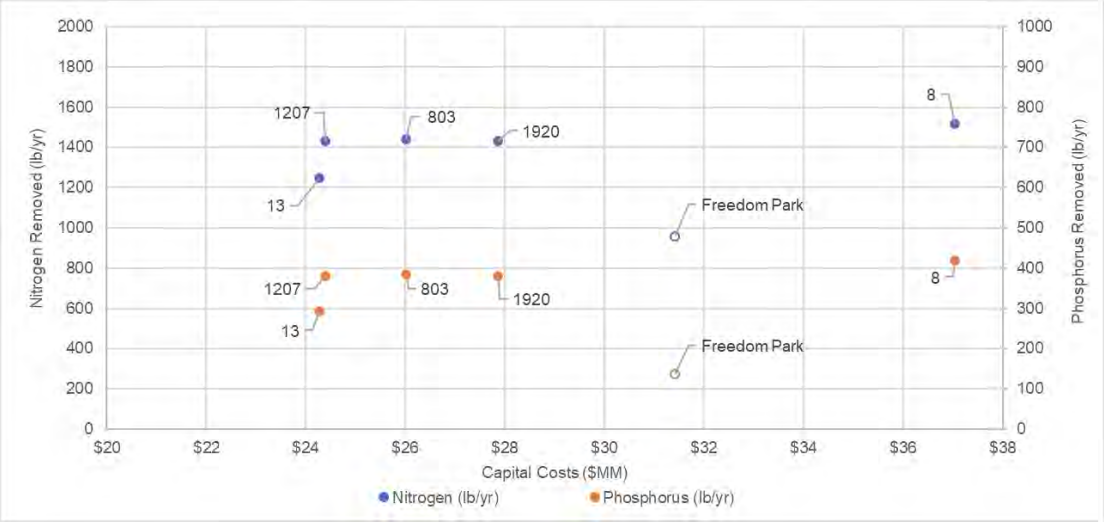

Table 6-28: ROMOPC Comparison

Items	PARCEL / PARCEL AREA				
	8	13	803	1207	1920
Land Acquisition	$374,732	$108,511	$352,939	$0	$334,065
Survey, Permitting & Design	$3,869,666	$2,621,142	$2,681,094	$2,543,125	$2,788,955
Construction	$27,640,470	$18,722,440	$19,150,670	$18,165,180	$19,921,110
Construction Oversight	$2,764,047	$1,872,244	$1,915,067	$1,816,518	$1,992,111
O&M (10-Years)	$2,041,000	$955,000	$1,922,000	$1,874,000	$1,819,000
Total Estimated Cost	**$36,689,915**	**$24,279,337**	**$26,021,770**	**$24,398,823**	**$26,855,241**
Estimated Cost per Acre	**$898,978**	**$1,271,331**	**$676,956**	**$650,972**	**$738,111**

1. Land Acquisition Costs were taken from the Property Appraisers Website (Area 8 - $16,000/ac; Area 13 - $8,347/ac & $0 for publicly owned; Parcel 803 - $8,347/ac; Parcel 1207 - $0 for publicly owned; Parcel1920 - $33,625/ac).
2. Land costs for privately owned lands if purchased at market value are likely to be significantly higher that Property Appraiser estimates and should be appraised to determine a more accurate acquisition cost.
3. Publicly held land is not acquired; however, there may be negligible costs to lease or obtain an agreement or authorization to use.
4. The capital project costs developed in this table have been prepared at a schematic/conceptual rough order of magnitude level and are not based on a final design and are therefore provided here for comparative value only.

Cost effectiveness of each parcels' treatment solution can be determined based upon the overall nutrient mass removal vs. capital costs as illustrated in the following **Figure 6-30**. Per this chart, the most cost-effective parcel for both phosphorous and nitrogen is 1207 followed closely by 803 and 1920.

Figure 6-30: Mass Removal Rates vs Capital Costs

6.2.4 Final Parcel Ranking

Based on the Preliminary Evaluative Criteria (**Section 6.1**), the Secondary Evaluative Criteria evaluations as described in **Section 6.2.1**, and the scoring considerations detailed in **Section 6.2.2**, the following final scoring of parcels is presented for consideration in **Table 6-29.**

Table 6-29: Final Parcel Ranking Matrix

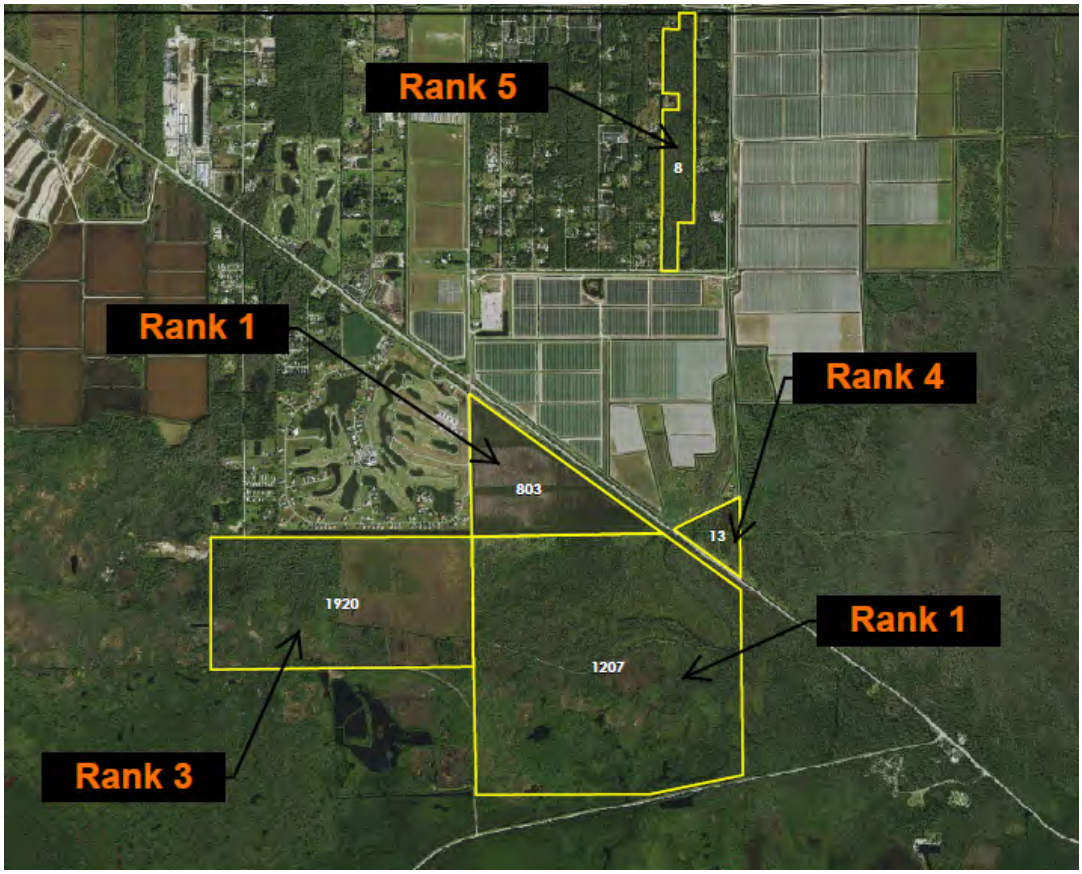

Site ID Number			803	1207	1920
Parcel Area ID	8	13			
Total Acreage	67.2	32.9	131.5	640.8	330.6
No. of Individual Parcels	21	2	1	1	1
Preliminary Evaluative Criteria					
Hydraulic Distance	1	7	6	7	4
Presence of Contiguous Non-wetland Areas	3	1	7	3	7
Ease of Access	3	7	7	6	5
Land Use Restriction Level	7	1	7	3	5
Subtotal Primary Evaluative Criteria	14	16	27	19	21
Secondary Evaluative Criteria					
Ecological Factors	3	3	7	5	5
Capital Project Costs	1	7	6	7	6
Water Quality Benefit	7	1	6	6	6
Potential Public Use / Public Asset	1	3	3	7	3
Willing Seller / Ease of Acquisition	3	3	1	6	4
Subtotal Secondary Evaluative Criteria	15	17	23	31	24
Total Score	29	33	50	50	45
Final Ranking:	5	4	1	1	3

The purpose of this final scoring was to provide a final ranking of the five parcels or parcel areas previously selected for further evaluation in **Section 6.1.6**. **Table 6-30** below lists the final ranking of the parcel or parcel areas. The final parcel map can be found in **Figure 6-31** with a full-size map and top ranked map in **Appendix N.**

Table 6-30: Final Parcel Ranking

Final Ranking	1	1	3	4	5
Site ID Number	803	1207	1920		
Parcel Area ID				13	8
Total Acreage	131.5	640.8	330.6	32.9	67.2
No. of Individual Parcels	1	1	1	2	21

Figure 6-31: Final Parcel Map

6.2.5 Multiple Project Sequencing

In addition to evaluating each parcel individually, future planning may take into consideration sequencing treatment across multiple parcels. For example, the creation of an initial collection pond to immediately intercept and detain flow on the southern portion of Parcel Group 13 (Parcel ID 1206) would provide multiple project benefits, regardless of the parcel selected.

These benefits include:

- Provide initial capture, detention, and flow attenuation
- Promote sedimentation
- Reduce nutrient mass bypassing treatment
- Provide maintenance access and reduce maintenance needs at subsequent parcel
- Increase longevity of treatment solution at subsequent parcel

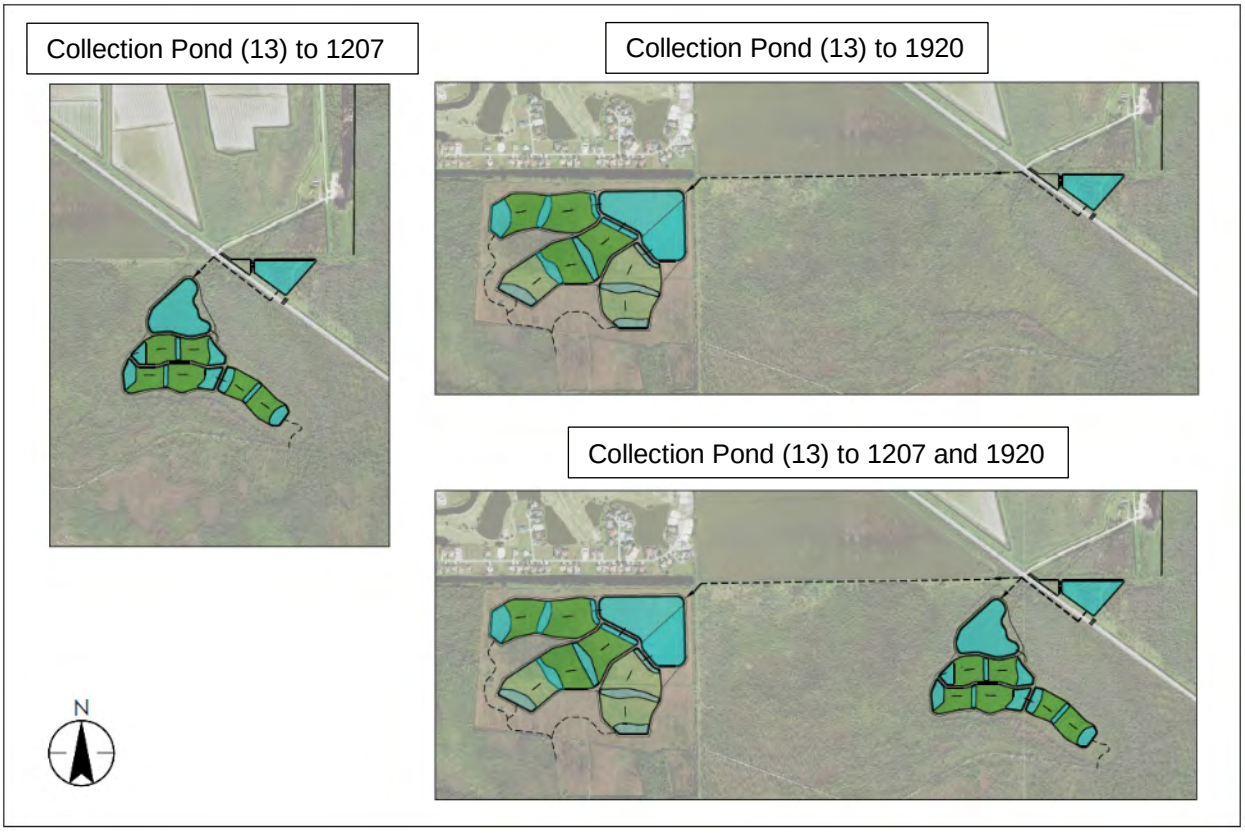

Consistent with the previous parcel scenarios, a weir would be installed within the Tamiami canal to intercept and divert surface water into a 5-acre collection pond (**Figure 6-32**). In addition to surface water within the canal, water from the SWPF could be diverted into the 5-ac collection pond. The collection pond would provide storage to attenuate flow which would facilitate sedimentation processes and reduce the overall nutrient mass entering the treatment parcel. Surface water within the collection pond would then be pumped to the candidate treatment parcel. Excess water not captured by the collection pond would be safely bypassed back into the Tamiami Canal.

Figure 6-32: Collection Pond Schematic

Example sequences are illustrated in the following **Figure 6-33**, in which the collection pond on Parcel 13 could be combined with treatment on Parcel 1207 and/or Parcel 1920. If the situation changes in the future, Parcel 803 could also be integrated in whole or part, into one of the example sequences. To consider multiple project sequences including two or more larger projects, additional modeling should be performed to determine if more treatment areas would result in effective treatment and significant nutrient removal to benefit downstream OFW's.

Figure 6-33: Example Multiple Project Sequences

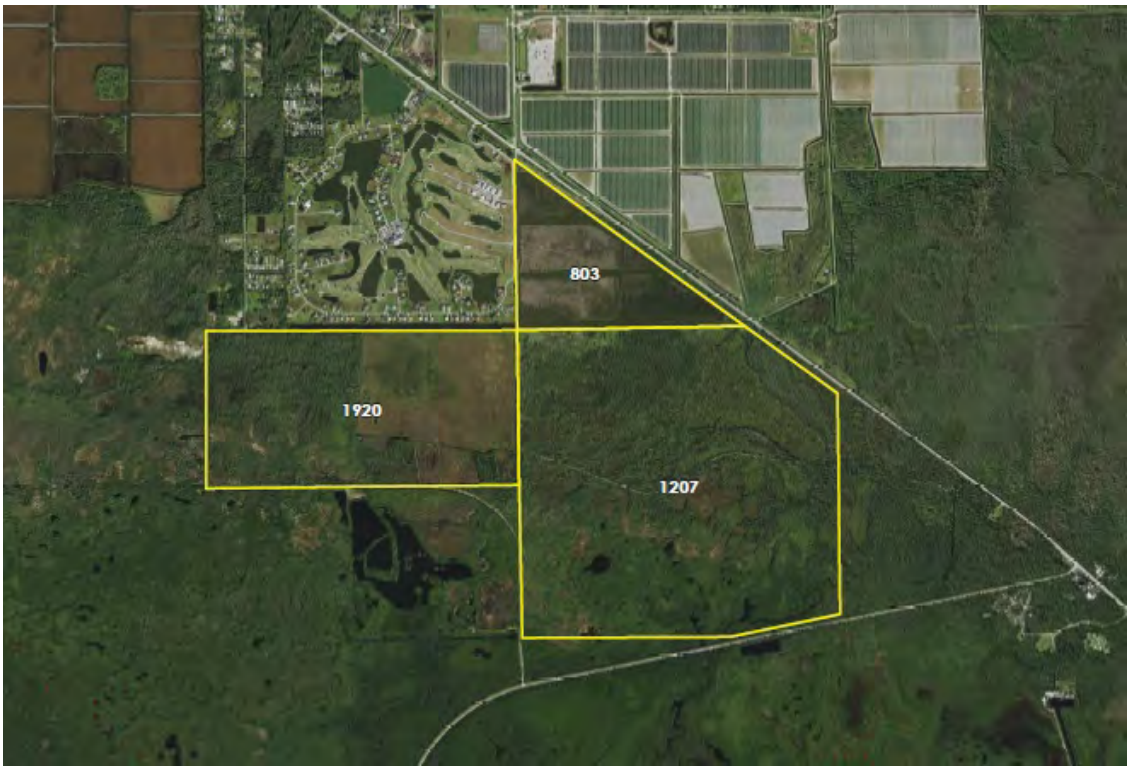

7.0 RESULTS

The purpose of the WQSA was to identify candidate parcels or parcel areas that could serve to host one or more of the water quality projects identified in the WQFS and provide a basis for comparative analysis among the candidate parcels to support site selection.

As noted in the WQFS, the most feasible solution to improve water quality both in the Tamiami Canal and downstream water resources is to intercept water at/near BR36, prior to mixing with the additional cleaner flow associated with the PSRP, and then convey, detain, and treat the diverted water within a passive sequence of nature-based solutions. The schematics contained within this study intercept water at/near BR36 and then treat the diverted water through a sequence of sedimentation basins, open water zones, and constructed treatment wetland marshes which align with the prior study.

Based upon the numerous and cumulative evaluations detailed within this analysis, three parcels have the potential to meet the intent of this project. Parcel Site IDs 803, 1207, and 1920 all ranked similarly (**Figure 7-1**). The remaining two of the final five locations, Parcel Area IDs 13 and 8 failed to achieve a reasonable score and as such should be withdrawn from further consideration at this time. While the three higher ranked parcels are all feasible from a design and engineering standpoint, each has a distinct set of characteristics as identified in this report that should be weighted in advance of selecting a parcel or parcels for the proposed project (i.e. use of public versus private lands, willing seller, etc.).

Figure 7-1: Top Ranked Parcels

7.0 Results

During the course of this study, the property owner for Parcel Site 803 and the northern portion of Parcel Area 13 indicated that they are an unwilling seller making land acquisition infeasible outside of an eminent domain process. Pursuing acquisition through the eminent domain process is likely to contribute to significantly higher land costs. A representative for Parcel Site 1920, late in the course of this study, communicated a willingness to discuss the project further but did not indicate if they are a willing seller at this time. Parcel Site 1207 and the southern part of Parcel Area 13 are publicly owned and managed by the Collier-Seminole State Park. While no specific uses are identified in the Park's Unit Management Plan (UMP) for either parcel, some funding has been allocated for restoration of the 'bicycle seat' land and use of either area would require a revision to the UMP. The southern part of Parcel Area 13 also lies with the CERP and would require cooperation to remove this designation.

Each of the above conditions are unique to each parcel or parcel area and require further consideration at the policy making level by the South Florida Water Management District.

8.0 SUMMARY & ADDITIONAL CONSIDERATIONS

The overall purpose of the Picayune Watershed Water Quality Project is to reduce the discharge of nutrients to the downstream OFWs from existing surface water flows within the greater Picayune Watershed, including Belle Meade and agricultural and urban areas north of US 41 and west of the general focus area of this study, prior to mixing with the expected increased flows from the PSRP.

The initial stages of this project include both the Water Quality Feasibility Study (WQFS) and the Water Quality Site Analysis (WQSA). The purpose of the WQFS was to examine the feasibility of several water quality treatment options to improve water quality from existing and future flows prior to discharge to OFWs. The recommended treatment sequence presented in the Picayune Watershed Water Quality Feasibility Study (Stantec, 2021) was an initial sedimentation basin following by a series of free water/surface flow wetlands.

The purpose of the WQSA was to identify candidate parcels or parcel areas that could serve to host one or more of the water quality projects identified in the WQFS and provide a basis for comparative analysis among the candidate parcels to support site selection. Of the 1,935 parcels reviewed, three parcels (803, 1207, and 1920) have the potential to meet the intent of this project noting that each have their own unique benefits and challenges.

Additional considerations identified during the development of the Picayune Watershed Water Quality Siting Analysis Study:

- The use of modeling for this report was performed at a preliminary and conceptual level. Model inputs were consistently applied to each parcel to determine if the site location was appropriate and feasible. The final three parcels are all similarly situated and when compared on a per acre basis, would perform in a similar manner. This was the extent of which the modeling exercise was applied. Once a final parcel is selected, a more detailed modeling of the project design will be required which will address many of the TWG comments with regard to modeling and nutrient removal performance, water balance, discharge flows/concentrations, and overall impact to the water quality within the downstream OFWs.

- Consideration should be given to the use of a ±5-acre collection pond located on the southern part of Parcel Group 13 (Parcel ID 1206), as noted in **Section 6.2.5** of this report. While this land is both part of the Collier-Seminole State Park and within the CERP, the collection pond would provide storage to attenuate flow, facilitate sedimentation processes, and reduce the overall nutrient mass entering the treatment parcel. The collection pond located adjacent to US 41, would also minimize disturbance by providing a direct maintenance access point to the treatment element requiring the most maintenance. Furthermore, containing the majority of the sediment removal process to one accessible location, would support reductions in long term maintenance costs and improve the longevity of the downstream treatment sequences. This location is ideally suited for this purpose and should be a consideration as part of any project going forward.

- Consideration for the creation of a connected treatment solution, utilizing multiple parcels, may provide a larger mass removal of pollutants for the greater improvement of water quality to downstream OFWs. In this case, once the initial project is completed, additional modeling should be performed to determine if more treatment areas would result in effective treatment and significant nutrient removal to benefit downstream OFW's. This approach also carries the benefit of being able to monitor system performance after the new culverts are installed.

- Moving forward to complete the first phase of this project prior to the PSRP being fully operational should be considered as it's critical to improved water quality conditions for sensitive, downstream resources. Currently, the District anticipates the Miller Canal plugging to begin in the 2024-2025 dry season with all three PSRP pump stations online by the wet season in 2025.

- As noted by several TWG members, consideration for a monitoring and adaptive management plan should be included for any design adopted by the South Florida Water Management District. This plan should be developed in conjunction with the Picayune Strand Environmental Monitoring Plan.

- Also as noted by several TWG members, as part of the design and prior to implementation of a project, environmental studies and listed species surveys should be performed to fine-tune the design and minimize impacts both within the project area and downstream of the project's discharge.

- During this siting analysis project, the TWG was made aware of a potential project to remove nutrient rich sediment deposits from the US 41 drainage canal to improve downstream water quality. While not a part of this study, the District is examining the feasibility of conducting this sediment removal project to further reduce nutrients before this water enters the land areas south of US 41. If completed, this project would appear to supplement the water quality efforts outlined in this report.

Additional recommendations identified within the Picayune Watershed Water Quality Feasibility Study have been included in this study for reference and alignment:

- Implementation of a synoptic routine water quality monitoring program in the region to identify nutrient sources for possible implementation of source control efforts to reduce loading to the constructed water quality treatment system. Routine water quality monitoring should include both dry and wet weather events to fully capture potential contributions and assess overall loading scenarios.

- Local stakeholders, including both Public-Public and Public-Private Partnerships, pursue additional source control measures where appropriate through an effort to be conducted in parallel with the development of a water quality treatment system.

Appendix G LEGAL REVIEW DOCUMENTATION

MEMO

TO: Kyle Goodwin
Tim Hancock

FROM: Sarah E. Spector

DATE: December 14, 2021

RE: Property Analysis Summary

The following is a summary of the title reports reviewed for the forty six (46) parcels identified by Stantec and the South Florida Water Management District (the "District") as potential sites for the Picayune Strand Watershed Water Quality Project. This memorandum outlines the types of encumbrances found and also identifies areas where additional research may be needed to determine whether the encumbrance is still valid and/or whether it would prevent the District from using the property for its intended purpose.

Large Parcels

The encumbrances against Site IDs 803/1475, 1206/1207, 1260, 1321, 1474, and 1920 (the "Large Parcels") are each unique and a summary of each is provided in the attached memorandum titled "Large Parcel Property Analysis."

Site ID 803/1475 is subject to several oil, gas, and mineral right ("OGM") reservations. This is one of many parcels that is subject to such a reservation. For the time being, the reservation has been noted, but no further analysis has been performed as to whether the reserved rights are still valid and can be exercised by the party holding them. There is also a roadway easement over the southern sixty feet (60') of Parcel 1475 from the east side of US 41 to the east line of Section 21. The easement is contained in several documents, each of which is listed in the "Large Parcel Property Analysis" memorandum, and one such document enlarges the right to include roadway and utility uses, while one only grants a terminable license for use as a tomato road. This is the only parcel of all 46 reviewed that also recently had agreements recorded relative to this specific project. That is, a Perpetual Access Road and Maintenance Easement and Temporary Construction Easement in favor od the District were recently recorded in conjunction with the Picayune Strand Restoration Project.

Several documents relative to **Site ID 1206/1207** and **Site ID 1260** contain OGM reservations, each of which is summarized in the attached "Large Parcel Property Analysis" memorandum. The deeds conveying the properties also contain a restriction as to park use that reads as follows:

> The lands shall be held by Florida Board of Forestry and Parks only so long as said lands shall be embraced or included with a State public park to be known as Collier-Seminole State Park and maintained wholly by said Florida Board of Forestry and Parks, or other State Agency, or its proper officials.

The 99 year park lease currently in effect for these properties similarly conditions the use of the property by allowing the lessee to develop, improve, operate, maintain and otherwise manage said land for public outdoor recreational, park, historic, conservation and related purposes and provides lessee with the right to enter into further agreements or to sublease all or any part of the land so long as the agreement and/or sublease shall effectively carry out and further the general purposes herein described. While these restrictions have been noted, no additional research has been done to determine whether there is case law to suggest how courts have applied it previously. Accordingly, it may be that the park use restrictions may still allow the District to use the property for the project.

Finally, both properties are subject to State Highway Dedications and road right-of-way easements, which are also summarized in the "Large Parcel Property Analysis" memorandum.

The only encumbrance against **Site ID 1321** is an OGM reservation, though surface rights have been waived.

Site ID 1474 is subject to a roadway easement in favor of all current owners or abutting lands and the public over the north thirty feet (30'). It is also subject to restrictive covenants that were recorded as a condition of Army Corps of Engineers (ACOE) Permit Number 20001434. The specific restrictions are listed in full in the attached "Large Parcel Property Analysis" memorandum and should be reviewed before determining whether this is an appropriate site for the District's intended use.

Site ID 1920 is encumbered by two mortgages. The first of the mortgages includes clauses relative to the care and transfer of the premises, which may have an impact on use of the property for the intended purpose. The second mortgage refers to covenants in the loan agreement. However, the loan agreement is not a recorded document, so it is not possible to determine whether its provisions would impact the District's proposed use. The full citation of the referenced language is included in the section of the enclosed memorandum that addresses Site ID 1920. Both mortgages may encumber additional property and, as such, release of Site ID 1920 may be an option, but the title documents have not been reviewed to determine this.

Section 16 Parcels

All properties within Parcel Areas 6, 8, 9, and 10 (the "Section 16 Parcels") were originally owned by the State Board of Education of Florida. When conveying the property to Walter G. Sorokoty on January 28, 1958, the State Board of Education reserved for itself and its successors title to an undivided three-fourths of all phosphate, minerals, and metals, and title to an undivided one-half of all petroleum that may be in, on, or under the described land (collectively referred to hereinafter as "OGM rights"). This reservation was carried forward in the warranty deeds from Sorokoty to third parties (except as to Site ID 42), together with the following restrictions:

1. Reservation of a right-of-way easement for all the usual purposes of ingress and egress in and under the [West and/or East and in some cases South] 30 feet of the above described premises. The reservation shall run with the land and shall insure

to the benefit and use of the owner/s of said described premises and to the owners of the contiguous lands bordering and touching said right-of-way easement.

2. Said premises shall not be used for a junk yard, dumping ground or for the accumulation of garbage or foul smelling matter other nuisances which may be detrimental to the comfort, health or safety of the inhabitants of the surrounding community.

3. There shall not be removed from said premises any quantity of soil, which will lower the uniform grade of the property.

4. Said premises shall not be purchased or occupied by any person other than a member of the Caucasian race.

The foregoing was included in the deeds for all Section 16 Parcels. The location of the easement referenced in Item 1 above depended upon the location of the parcel, as the purpose was to create access to all parcels within Section 16, though it should be noted that each title report for the Section 16 Parcels includes a notation that lack of access may be an issue. The specific location of the easement for each parcel can be found in the individual Parcel Area Property Analysis memorandums attached hereto, each of which contain the specific encumbrances applicable to the individually listed parcels.

Each of the title reports for the Section 16 parcels also contained reference to an easement from Sorokoty to Barron Collier, Jr. over the West 30 feet, the South 30 feet and the East 30 feet of Section 16, Township 51 South, Range 27 East for a perpetual right-of-way of necessity of egress and ingress. However, the easement only affects those parcels that are located on the western, eastern, and southern boundaries of Section 16. For purposes of this analysis, the easement to Collier only impacts the parcels with the following Site IDs: 180 (east), 222 (east), 245 (east), 361 (east), 398 (east), 480 (east and south), and 515 (south). The easement contains language that provides that the easement area may be used only for the purpose stated, with the authority to improve and responsibility to maintain retained by Sorokoty.

Separate from the reservation of OGM rights, the grant of easement, and the restrictions discussed above, there are a few additional encumbrances that only apply to specific parcels:

1. Site ID 75 is also subject to:

   (a) A Lee County Electric Cooperative (LCEC) easement over the south six feet (6') to construct, operate and maintain single poles and lines for the transmission and distribution of electricity and communications facilities, including other poles, guys, anchors, footings, ground connections, attachments, fixtures, equipment and accessories above or below ground as necessary or desirable in connection therewith. The easement further provides that the parties agree that no trees other than citrus trees and no buildings or structures other than fences will be located or constructed within the bounds of said right-of-way by the grantor, their heirs and

assigns. The grantors, however, reserved the right to use said right-of-way for general farming, citrus grove, or pasture purposes.

(b) A LCEC easement over the easterly eight feet (8') of the westerly thirty eight feet (38') and northerly eight feet (8') to be used for the construction, operation, and maintenance of one or more overhead and underground electric distribution lines, including, but not limited to, wires, poles, cables, conduits, anchors, guys, and roads, trails, and equipment associated therewith, attachments and appurtenant equipment for fiber optic telecommunications and television purposes.

2. Site ID 109 is also subject to a LCEC easement over the north six feet (6') to construct, operate and maintain single poles and lines for the transmission and distribution of electricity and communications facilities, including other poles, guys, anchors, footings, ground connections, attachments, fixtures, equipment and accessories above or below ground as necessary or desirable in connection therewith. This easement contains the same language relative to use of the easement area as that identified in Item 1(a) above for Site ID 75.

3. Site ID 245 is subject to a mortgage in favor of Mary Kaczynski.

4. Site ID 301 is subject to a mortgage in favor of Lake Michigan Credit Union.

5. Site ID 393 is subject to a Judgment/Certificate of Delinquency for amounts owed by Jose A. Lara. The specific property is not mentioned in the Judgement but applies to all property owned by Jose A. Lara. The deed for Site ID 393 refers to the grantee as Jose Lara, so it may not be the same individual.

6. Site ID 395 is subject to a mortgage in favor of Finley Fryer.

7. Site ID 417 is subject to:

(a) Mortgage in favor of Victor Meza and Norma A. Lemus.

(b) Final Summary Judgment against Flabia Izquierdo.

(c) Default Final Judgment against Flabia Izquierdo.

(d) Notice of Lien against Jose Carlos Terra Izquierdo. As with the Judgment mentioned in Item 4 above, the party to the Notice of Lien and the property owner may not be same.

8. Site ID 515 is subject to a Federal Tax Lien against Fabian Marin.

In addition to the foregoing, it should be noted that, pursuant to the Collier County Property Appraiser property information and the Collier County Property Appraiser's aerial, Site ID 245 is not vacant.

Given the age of the covenants recorded in the Sorokoty deeds, it is possible that some may have been extinguished by the Marketable Record Title Act found in Chapter 712, Florida Statutes. However, this has not been analyzed during the initial review of the title reports.

RE: Property Analysis

1. Site ID 803/1475 (Parcel ID 00770120003)

A. OGM Reservations

i. March 5, 1975 Deed from Barron Collier, Jr., et al to Natica Corporation (O.R. Book 613, Page 730)

ii. September 3, 1975 Easement from Natica Corporation to A. Duda & Sons (O.R. Book 629, Page 122) – Carries forward rights reserved in O.R. 613 PG 730

iii. October 23, 1975 Deed from Natica Corporation to West Florida Agro, Ltd. (O.R. Book 633, Page 1219) – Carries forward rights reserved in O.R. 613 PG 730

iv. August 25, 2010 Notice of Interest in Land (O.R. Book 4598, Page 2925) – Preserving rights reserved in O.R. Book 613, Page 730

B. Roadway Easement over the southern 60' of Parcel 1475 from east side of US 41 to east line of Section 21

i. September 3, 1975 Easement from Natica Corporation to A. Duda & Sons (O.R. Book 629, Page 122)

ii. October 23, 1975 Deed from Natica Corporation to West Florida Agro, Ltd. (O.R. Book 633, Page 1219)

iii. July 26, 1991 Easement from Florida Farm Development Co., Ltd. and West Florida Agro to A. Duda & Sons – Grant of easement for roadway and utilities not intended to modify #6 OR 629, PG 122 (O.R. Book 1635, Page 1305)

iv. July 26, 1991 License Agreement from Florida Farm Development Co., Ltd. and West Florida Agro to A. Duda & Sons – Grant of license for tomato

road not intended to modify #6 OR 629, PG 122 (O.R. Book 1635, Page 1312)

v. August 28, 1996 Easement from A. Duda & Sons to Board of Trustees of the Internal Improvement Fund (O.R. Book 2220, Page 572)

C. Perpetual Access Road and Maintenance Easement over 40' strip that runs along the diagonal of the small triangular piece east of 41 – July 24, 2020 Easement from WFA Land Co. to SFWMD for vehicular and pedestrian access, ingress and egress, and road maintenance purposes for construction, operation, effectuation or maintenance of SFWMD's Picayune Strand Restoration Project (O.R. Book 5799, Page 1227)

D. Temporary Construction Easement over .9 acre parcel – July 24, 2020 Easement from WFA Land Co. to SFWMD for non-exclusive use of, and access, ingress and egress over, across and through the Property for (i) equipment and materials staging and storage and (ii) daily and overnight parking of vehicles associated with Grantee's Picayune Strand Restoration project (O.R. Book 5799, Page 1400)

2. Site ID 1206/1207 (Parcel ID 00774880006)

A. OGM Reservation

i. December 3, 1940 Oil, gas, and sulfur lease from Humble Oil & Refining Company to Peninsular Oil & Refining Company (Deed Book 9, Page 560)

ii. June 1, 1944 Warranty Deed from Lee County Land Company to Florida Board of Forestry and Parks (Deed Book 12, Page 88)

iii. December 30, 1976 Notice of Claim recorded by The Collier Company (O.R. Book 672, Page 1334) – Claims rights reserved in Deed Book 12, Page 88

iv. July 26, 2010 Notice of Interest recorded Barron Collier Resources, LLLP and Collier Land Holdings, Ltd. (O.R. Book 4587, Page 3167) – Claims rights reserved in Deed Book 12, Page 88

B. Park Restriction – June 1, 1944 Warranty Deed from Lee County Land Company to Florida Board of Forestry and Parks (Deed Book 12, Page 88)

The lands shall be held by Florida Board of Forestry and Parks only so long as said lands shall be embraced or included with a State public park to be known as Collier-Seminole State Park and maintained wholly by said Florida Board of Forestry and Parks, or other State Agency, or its proper officials.

C. Park Lease – January 23, 1968 99 Year Lease between Trustees of the Internal Improvement Fund of the State of Florida and the Florida Board of Parks and Historic Memorials

Allows lessee to develop, improve, operate, maintain and otherwise manage said land for public outdoor recreational, park, historic, conservation and related purposes and provides lessee with the right to enter into further agreements or to sublease all or any part of the land so long as the agreement and/or sublease shall effectively carry out and further the general purposes herein described

D. State Highway Dedication over 22.1 acres for widering of State Road 90 (legal description illegible) – October 1958 Resolution by Florida Board of Parks and Historic Memorials (O.R. Book 32, Page 376)

E. Road Right-of-Way Easement over .14 acre parcel tied to and subject to terms of Park Lease – January 28, 1974 Easement from State of Florida Department of Natural Resources, Division of Recreation and Parks to Board of County Commissioners of Collier County (O.R. Book 579, Page 519)

3. Site ID 1260 (Parcel ID 00774640000)

A. OGM Reservation

i. December 3, 1940 Oil, gas, and sulfur lease from Humble Oil & Refining Company to Peninsular Oil & Refining Company (Deed Book 9, Page 560)

ii. June 1, 1944 Warranty Deed from Collier County to Florida Board of Forestry and Parks (Deed Book 12, Page 86)

iii. June 1, 1944 Warranty Deed from Lee County Land Company to Florida Board of Forestry and Parks (Deed Book 12, Page 88)

iv. December 30, 1976 Notice of Claim recorded by The Collier Company (O.R. Book 672, Page 1334) – Claims rights reserved in Deed Book 12, Page 88

v. July 26, 2010 Notice of Interest recorded Barron Collier Resources, LLLP and Collier Land Holdings, Ltd. (O.R. Book 4587, Page 3167) – Claims rights reserved in Deed Book 12, Page 88

B. Park Restriction – The lands shall be held by Florida Board of Forestry and Parks only so long as said lands shall be embraced or included with a State public park to be known as Collier-Seminole State Park and maintained wholly by said Florida Board of Forestry and Parks, or other State Agency, or its proper officials.

i. June 1, 1944 Warranty Deed from Collier County to Florida Board of Forestry and Parks (Deed Book 12, Page 86)

ii. June 1, 1944 Warranty Deed from Lee County Land Company to Florida Board of Forestry and Parks (Deed Book 12, Page 88)

C. Park Lease – January 23, 1968 99 Year Lease between Trustees of the Internal Improvement Fund of the State of Florida and the Florida Board of Parks and Historic Memorials

Allows lessee to develop, improve, operate, maintain and otherwise manage said land for public outdoor recreational, park, historic, conservation and related purposes and provides lessee with the right to enter into further agreements or to sublease all or any part of the land so long as the agreement and/or sublease shall effectively carry out and further the general purposes herein described

D. State Highway Dedication of that part of the S 909' as measured along the South boundary of the existing Tamiami Trail (SR 90) of SE 1/4 of SE 1/4 of Section 27 lying each side of and within certain tabulated distances or widths as measured at right angles for widering of State Road 90 – June 22, 1954 Resolution by Florida Board of Parks and Historic Memorials (O.R. Book 34, Page 236)

E. State Highway Dedication over 22.1 acres for widering of State Road 90 (legal description illegible) – October 1958 Resolution by Florida Board of Parks and Historic Memorials (O.R. Book 32, Page 376)

F. Utility Easement over that portion of Section 27 South of State Road 92 and South of U.S. Hwy. 41, less that parcel of land described in DB 12, page 88 less a parcel in DB 29, page 257 – November 24, 1975 Easement from State of Florida Department of Natural Resources, Division of Recreation and Parks to LCEC

4. Site ID 1321 (Parcel ID 00774760003)

A. OGM Reservation

i. June 15, 1993 Deed from Harold S. Lynton, Lamar Gable and Juliet C. Sproul, as Trustees under the Trust created for the benefit of Juliet C. Sproul, to Harold S. Lynton, Juliet C. Sproul, and Katherine G. Sproul (O.R. Book 1838, Page 797) – surface rights released by Waiver recorded at O.R. Book 2315, Page 1455

5. Site ID 1474 (Parcel ID 00774920005)

A. Roadway Easement over north 30’ in favor of all current owners or abutting lands and the public – April 1, 1968 Deed from Evernia Corporation to William T. Morrison (O.R. Book 273, Page 202)

B. Restrictive Covenants pursuant to ACOE Permit 20001434 – April 20, 2004 Declaration of Restrictive Covenants recorded by Raymond H. Smela, as Managing Member of RJS, LLC (O.R. Book 3548, Page 1939)

Restrictions in place except for restoration, creation, enhancement, maintenance and monitoring activities, or surface water management improvements, which are permitted or required by the Permit, as may, from time to time, by modified:

i. Construction or placing of buildings, roads, signs, billboards or other advertising, utilities, or other structures on or above the ground;

ii. Dumping or placing of soil or other substance or material as landfill, or dumping or placing of trash, waste, or unsightly or offensive materials;

iii. Removal or destruction of trees, shrubs, or other vegetation, except for the removal of exotic or nuisance vegetation in accordance with an approved maintenance plan;

iv. Excavation, dredging, or removal of loam, peat, gravel, soil, rock, or other material substance in such manner as to affect the surface;

v. Surface use except for purposes that permit the land or water area to remain in its natural condition;

vi. Activities detrimental to drainage, flood control, water conservation, erosion control, soil conservation, or fish and wildlife, habitat preservation including, but not limited to, ditching, diking and fencing;

vii. Acts or uses detrimental to such aforementioned retention of land or water areas;

viii. Acts or uses, which are detrimental to the preservation of any features or aspects of the Property having historical or archaeological significance.

The perimeter of the Property shall at all times be plainly marked by permanent signs saying, "Protect Natural Area," or by an equivalent, permanent marking system.

6. Site ID 1920 (Parcel ID 00774960007)

A. Mortgages

i. July 20, 1999 Mortgage and Security Agreement (O.R. Book 2573, Page 1490)

Section 6 Care of Premises – Mortgagor shall maintain, preserve, protect and keep in good order and condition, the Mortgaged Premises and from time to time shall make all necessary or appropriate repairs, replacements

and improvements thereto. Mortgagor will commit or permit no waste thereon and will do or permit no act by which the Mortgaged Premises will become less valuable. Mortgagor shall not remove, transfer, sell or dispose of any portion of the Mortgaged Premises including fill dirt, shell, topsoil, trees or other landscaping except pursuant to construction plans approved by Mortgagee. In the event that the Mortgaged Premises or any part thereof shall be damaged or destroyed by fire or other casualty, Mortgagor shall immediately notify Mortgagee in writing of such damage or destruction. Upon the direction of Mortgagee, Mortgagor shall, at its sole cost and expense, commence and diligently continue to restore, repair, replace, rebuild or alter the Mortgaged Premises as nearly as possible to its value, condition and character immediately prior to such damage or destruction provided that the insurance proceeds are made available to Mortgagor for such purposes.

Section 9 No Transfer – Without the prior written consent of Mortgagee in each instance, Mortgagor will abstain from and will not cause or permit, whether voluntarily or by operation of law, and whether directly or indirectly: (a) any transfer of title to or legal or beneficial interest in the Mortgaged Premises or any part thereof, or (b) any change in the equity ownership (direct or indirect) of Mortgagor or any venturer of Mortgagor.

Section 12 Leases and Purchase Agreements – Mortgagor agrees not to enter into any leases or agreements to lease all or part of the Mortgaged Premises without the prior written consent of Mortgagee.

ii. September 2, 2011 Amended, Restated and Consolidated Mortgage, Assignment of Rents, Security Agreement and Fixture Filing (O.R. Book 4721, Page 1642)

Section 2.5 Leasing – Mortgagor shall not lease the Property or any part of it expect strictly in accordance with the terms of the Loan Agreement.

Article 5 – Mortgage is subject to terms and covenants contained in Loan Agreement, which is not a recorded document.

RE: Parcel Area 6 Property Analysis

1. Site ID 41 (Parcel ID 00756880008)

A. OGM Reservation in January 28, 1958 Deed from State Board of Education of Florida to Walter G. Sorokoty, Trustee (O.R. Book 20, Page 139)

B. Restrictions in March 8, 1962 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Welkin-Florida, Inc. (O.R. Book 104, Page 353)

i. Reservation of a right-of-way easement for all the usual purposes of ingress and egress in and under the West 30 feet of the above described premises. The reservation shall run with the land and shall insure to the benefit and use of the owner/s of said described premises and to the owners of the contiguous lands bordering and touching said right-of-way easement.

ii. Said premises shall not be used for a junk yard, dumping ground or for the accumulation of garbage or foul smelling matter other nuisances which may be detrimental to the comfort, health or safety of the inhabitants of the surrounding community.

iii. There shall not be removed from said premises any quantity of soil, which will lower the uniform grade of the property.

iv. Said premises shall not be purchased or occupied by any person other than a member of the Caucasian race.

v. Reservation by the State Board of Education of Florida, and their successors, title to an undivided three-fourths of all Phosphate, minerals and metals, and title to an undivided one-half of all petroleum that may be in, on or under the above described land, with the privilege to mine and develop the same

C. Right-of-way easement for all the usual purposes of ingress and egress in and under the West 30 feet

i. March 8, 1962 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Welkin-Florida, Inc. (O.R. Book 104, Page 353)

ii. April 10, 1970 Warranty Deed from J. Wells Kinkaid, Robert W. Kinkaid, and John W. Kinkaid, Jr., as Trustees in dissolution of Welkin-Florida, Inc., to Welkin Farms No. 3, Inc. (O.R. Book 351, Page 157)

iii. March 2, 1981 Quit Claim Deed from Welkin Farms No. 3, Inc. to Jeannette E. Kinkaid, Trustee, Kinkaid Heirs (O.R. Book 913, Page 1422)

iv. September 16, 1988 Warranty Deed from Jeannette E. Kinkaid, individually and as Trustee for Kinkaid Heirs to John W. Kinkaid, Jr., Scott W. Kinkaid, and Robert W. Kinkaid (O.R. Book 1386, Page 2316)

v. September 20, 1988 Warranty Deed from Jeannette E. Kinkaid and John W. Kinkaid, Jr., as surviving members of the Board of Directors of Welkin Farms No. 3, Inc., to Jeannette E. Kinkaid, John W. Kinkaid, Jr., Scott W. Kinkaid, and Robert W. Kinkaid (O.R. Book 1386, Page 2318)

vi. January 18, 1990 Certificate of Title issued to George E. Mrdeza and Janet E. Mrdeza (O.R. Book 1503, Page 1376)

vii. August 22, 1990 Amended Certificate of Title issued to George E. Mrdeza and Janet E. Mrdeza (O.R. Book 1554, Page 810)

viii. July 6, 1990 Warranty Deed from George E. Mrdeza and Janet E. Mrdeza to Jeannette E. Kinkaid (O.R. Book 1544, Page 323)

2. Site ID 42 (Parcel ID 00751480005)

A. OGM Reservation in January 28, 1958 Deed from State Board of Education of Florida to Walter G. Sorokoty, Trustee (O.R. Book 20, Page 139)

3. Site ID 75 (Parcel ID 00759200009)

A. OGM Reservation in January 28, 1958 Deed from State Board of Education of Florida to Walter G. Sorokoty, Trustee (O.R. Book 20, Page 139)

B. Restrictions in January 10, 1964 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Adelee R. Lutz (O.R. Book 159, Page 137)

i. Reservation of a right-of-way easement for all the usual purposes of ingress and egress in and under the West 30 feet of the above described premises. The reservation shall run with the land and shall insure to the benefit and

use of the owner/s of said described premises and to the owners of the contiguous lands bordering and touching said right-of-way easement.

ii. Said premises shall not be used for a junk yard, dumping ground or for the accumulation of garbage or foul smelling matter other nuisances which may be detrimental to the comfort, health or safety of the inhabitants of the surrounding community.

iii. There shall not be removed from said premises any quantity of soil, which will lower the uniform grade of the property.

iv. Said premises shall not be purchased or occupied by any person other than a member of the Caucasian race.

v. Reservation by the State Board of Education of Florida, and their successors, title to an undivided three-fourths of all Phosphate, minerals and metals, and title to an undivided one-half of all petroleum that may be in, on or under the above described land, with the privilege to mine and develop the same

C. Right-of-way easement for all the usual purposes of ingress and egress in and under the West 30 feet – January 10, 1964 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Adelee R. Lutz (O.R. Book 159, Page 137)

D. Easement over South 6' to construct, operate and maintain single poles and lines for the transmission and distribution of electricity and communications facilities, including other poles, guys, anchors, footings, ground connections, attachments, fixtures, equipment and accessories above or below ground as necessary or desirable in connection therewith – March 23, 1972 Easement to Lee County Electric Cooperative (O.R. Book 444, Page 387)

Grantors agree that no trees other than citrus trees and no buildings or structures other than fences will be located or constructed within the bounds of said right-of-way by the grantor, herein, their heirs and assigns. The grantors, however, reserve the right to use said right-of-way for general farming, citrus grove, or pasture purposes.

E. Perpetual Right-of-Way Easement over easterly 8' of the Westerly 38' and Northerly 8' to be used for the construction, operation, and maintenance of one or more overhead and underground electric distribution lines, including, but not limited to, wires, poles, cables, conduits, anchors, guys, and roads, trails, and equipment associated therewith, attachments and appurtenant equipment for fiber optic telecommunications and television purposes – October 19, 2005 Easement to Lee County Electric Cooperative (O.R. Book 3941, Page 876)

4. Site ID 109 (Parcel ID 00759520006)

A. OGM Reservation in January 28, 1958 Deed from State Board of Education of Florida to Walter G. Sorokoty, Trustee (O.R. Book 20, Page 139)

B. Restrictions in November 24, 1964 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Elaine H. Rosenwinkel (O.R. Book 179, Page 371)

i. Reservation of a right-of-way easement for all the usual purposes of ingress and egress in and under the West 30 feet of the above described premises. The reservation shall run with the land and shall insure to the benefit and use of the owner/s of said described premises and to the owners of the contiguous lands bordering and touching said right-of-way easement.

ii. Said premises shall not be used for a junk yard, dumping ground or for the accumulation of garbage or foul smelling matter other nuisances which may be detrimental to the comfort, health or safety of the inhabitants of the surrounding community.

iii. There shall not be removed from said premises any quantity of soil, which will lower the uniform grade of the property.

iv. Said premises shall not be purchased or occupied by any person other than a member of the Caucasian race.

v. Reservation by the State Board of Education of Florida, and their successors, title to an undivided three-fourths of all Phosphate, minerals and metals, and title to an undivided one-half of all petroleum that may be in, on or under the above described land, with the privilege to mine and develop the same

C. Right-of-way easement for all the usual purposes of ingress and egress in and under the West 30 feet – November 24, 1964 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Elaine H. Rosenwinkel (O.R. Book 179, Page 371)

D. Easement over North 6' to construct, operate and maintain single poles and lines for the transmission and distribution of electricity and communications facilities, including other poles, guys, anchors, footings, ground connections, attachments, fixtures, equipment and accessories above or below ground as necessary or desirable in connection therewith – March 23, 1972 Easement to Lee County Electric Cooperative (O.R. Book 444, Page 386)

Grantors agree that no trees other than citrus trees and no buildings or structures other than fences will be located or constructed within the bounds of said right-of-

way by the grantor, herein, their heirs and assigns. The grantors, however, reserve the right to use said right-of-way for general farming, citrus grove, or pasture purposes.

5. Site ID 111 (Parcel ID 00758240002)

A. OGM Reservation in January 28, 1958 Deed from State Board of Education of Florida to Walter G. Sorokoty, Trustee (O.R. Book 20, Page 139)

B. Restrictions in May 9, 1962 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Hugh G. Dent, Jr. and Marie W. Dent (O.R. Book 109, Page 511); carried forward in May 18, 2007Warranty Deed from Marie W. Dent aka Marie Weaver Dent, an unremarried widow to Hugh Gilbert Dent, III, as Trustee of the Marie Weaver Dent Revocable Living Trust dated May 18, 2007 (O.R. Book 4232, Page 3714)

i. Reservation of a right-of-way easement for all the usual purposes of ingress and egress in and under the East 30 feet of the above described premises. The reservation shall run with the land and shall insure to the benefit and use of the owner/s of said described premises and to the owners of the contiguous lands bordering and touching said right-of-way easement.

ii. Said premises shall not be used for a junk yard, dumping ground or for the accumulation of garbage or foul smelling matter other nuisances which may be detrimental to the comfort, health or safety of the inhabitants of the surrounding community.

iii. There shall not be removed from said premises any quantity of soil, which will lower the uniform grade of the property.

iv. Said premises shall not be purchased or occupied by any person other than a member of the Caucasian race.

v. Reservation by the State Board of Education of Florida, and their successors, title to an undivided three-fourths of all Phosphate, minerals and metals, and title to an undivided one-half of all petroleum that may be in, on or under the above described land, with the privilege to mine and develop the same

C. Right-of-way easement for all the usual purposes of ingress and egress in and under the East 30 feet – May 9, 1962 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Hugh G. Dent, Jr. and Marie W. Dent (O.R. Book 109, Page 511)

6. Site ID 141 (Parcel ID 00757200001)

A. OGM Reservation in January 28, 1958 Deed from State Board of Education of Florida to Walter G. Sorokoty, Trustee (O.R. Book 20, Page 139)

B. Restrictions in January 19, 1962 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to James M. Dunne and Agatha Dunne (O.R. Book 102, Page 131)

i. Reservation of a right-of-way easement for all the usual purposes of ingress and egress in and under the West 30 feet of the above described premises. The reservation shall run with the land and shall insure to the benefit and use of the owner/s of said described premises and to the owners of the contiguous lands bordering and touching said right-of-way easement.

ii. Said premises shall not be used for a junk yard, dumping ground or for the accumulation of garbage or foul smelling matter other nuisances which may be detrimental to the comfort, health or safety of the inhabitants of the surrounding community.

iii. There shall not be removed from said premises any quantity of soil, which will lower the uniform grade of the property.

iv. Said premises shall not be purchased or occupied by any person other than a member of the Caucasian race.

v. Reservation by the State Board of Education of Florida, and their successors, title to an undivided three-fourths of all Phosphate, minerals and metals, and title to an undivided one-half of all petroleum that may be in, on or under the above described land, with the privilege to mine and develop the same

C. Right-of-way easement for all the usual purposes of ingress and egress in and under the West 30 feet – January 19, 1962 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to James M. Dunne and Agatha Dunne (O.R. Book 102, Page 131)

RE: Parcel Area 10 Property Analysis

1. Site ID 361 (Parcel ID 00757800003)

A. OGM Reservation in January 28, 1958 Deed from State Board of Education of Florida to Walter G. Sorokoty, Trustee (O.R. Book 20, Page 139)

B. Restrictions in March 8, 1962 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Welkin-Florida, Inc. (O.R. Book 104, Page 345)

i. Reservation of a right-of-way easement for all the usual purposes of ingress and egress in and under the East and West 30 feet of the above described premises. The reservation shall run with the land and shall insure to the benefit and use of the owner/s of said described premises and to the owners of the contiguous lands bordering and touching said right-of-way easement.

ii. Said premises shall not be used for a junk yard, dumping ground or for the accumulation of garbage or foul smelling matter other nuisances which may be detrimental to the comfort, health or safety of the inhabitants of the surrounding community.

iii. There shall not be removed from said premises any quantity of soil, which will lower the uniform grade of the property.

iv. Said premises shall not be purchased or occupied by any person other than a member of the Caucasian race.

v. Reservation by the State Board of Education of Florida, and their successors, title to an undivided three-fourths of all Phosphate, minerals and metals, and title to an undivided one-half of all petroleum that may be in, on or under the above described land, with the privilege to mine and develop the same

C. Right-of-way easement for all the usual purposes of ingress and egress in and under the East and West 30 feet

i. March 8, 1962 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Welkin-Florida, Inc. (O.R. Book 104, Page 345)

ii. April 10, 1970 Warranty Deed from J. Wells Kinkaid, Robert W. Kinkaid, and John W. Kinkaid, Jr., as Trustees in dissolution of Welkin-Florida, Inc., to Welkin Farms No. 3, Inc. (O.R. Book 351, Page 157)

iii. March 2, 1981 Quit Claim Deed from Welkin Farms No. 3, Inc. to Jeannette E. Kinkaid, Trustee, Kinkaid Heirs (O.R. Book 913, Page 1422)

iv. September 16, 1988 Warranty Deed from Jeannette E. Kinkaid, individually and as Trustee for Kinkaid Heirs to John W. Kinkaid, Jr., Scott W. Kinkaid, and Robert W. Kinkaid (O.R. Book 1386, Page 2316)

v. September 20, 1988 Warranty Deed from Jeannette E. Kinkaid and John W. Kinkaid, Jr., as surviving members of the Board of Directors of Welkin Farms No. 3, Inc., to Jeannette E. Kinkaid, John W. Kinkaid, Jr., Scott W. Kinkaid, and Robert W. Kinkaid (O.R. Book 1386, Page 2318)

vi. January 18, 1990 Certificate of Title issued to George E. Mrdeza and Janet E. Mrdeza (O.R. Book 1503, Page 1376)

vii. August 22, 1990 Amended Certificate of Title issued to George E. Mrdeza and Janet E. Mrdeza (O.R. Book 1554, Page 810)

viii. July 6, 1990 Warranty Deed from George E. Mrdeza and Janet E. Mrdeza to Jeannette E. Kinkaid (O.R. Book 1544, Page 323)

D. Grant of a perpetual right-of-way of necessity of egress and ingress to and through the West 30 feet, the South 30 feet and the East 30 feet of Section 16, Township 51 South, Range 27 East, Collier County, Florida – November 22, 1958 Easement recorded in O.R. Book 34, Page 345 and O.R. Book 34, Page 346, Public Records of Collier County, Florida.

"The said described property is to be used only for the purpose stated and the same may be improved and/or maintained by me as Trustee for the Owners or my successors for the said purpose and no liability of any kind shall be chargeable to you in connection with any such improvement or maintenance."

2. Site ID 398 (Parcel ID 00759803008)

A. OGM Reservation in January 28, 1958 Deed from State Board of Education of Florida to Walter G. Sorokoty, Trustee (O.R. Book 20, Page 139)

B. Restrictions in June 21, 1962 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Nancy Pilmore (O.R. Book 114, Page 362)

i. Reservation of a right-of-way easement for all the usual purposes of ingress and egress in and under the East and West 30 feet of the above described premises. The reservation shall run with the land and shall insure to the benefit and use of the owner/s of said described premises and to the owners of the contiguous lands bordering and touching said right-of-way easement.

ii. Said premises shall not be used for a junk yard, dumping ground or for the accumulation of garbage or foul smelling matter other nuisances which may be detrimental to the comfort, health or safety of the inhabitants of the surrounding community.

iii. There shall not be removed from said premises any quantity of soil, which will lower the uniform grade of the property.

iv. Said premises shall not be purchased or occupied by any person other than a member of the Caucasian race.

v. Reservation by the State Board of Education of Florida, and their successors, title to an undivided three-fourths of all Phosphate, minerals and metals, and title to an undivided one-half of all petroleum that may be in, on or under the above described land, with the privilege to mine and develop the same

C. Right-of-way easement for all the usual purposes of ingress and egress in and under the East and West 30 feet.

i. June 21, 1962 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Nancy Pilmore (O.R. Book 114, Page 362)

ii. July 12, 1990 Quit Claim Deed from Kathleen Henderson to Forest L. Henderson, Jr. and Kathleen Henderson, Trustees of the Henderson Family Trust dated July 12, 1990 (O.R. Book 1551, Page 439)

D. Grant of a perpetual right-of-way of necessity of egress and ingress to and through the West 30 feet, the South 30 feet and the East 30 feet of Section 16, Township 51 South, Range 27 East, Collier County, Florida – November 22, 1958 Easement recorded in O.R. Book 34, Page 345 and O.R. Book 34, Page 346, Public Records of Collier County, Florida.

"The said described property is to be used only for the purpose stated and the same may be improved and/or maintained by me as Trustee for the Owners or my

successors for the said purpose and no liability of any kind shall be chargeable to you in connection with any such improvement or maintenance."

3. Site ID 419 (Parcel ID 00758600008)

A. OGM Reservation in January 28, 1958 Deed from State Board of Education of Florida to Walter G. Sorokoty, Trustee (O.R. Book 20, Page 139)

B. Restrictions in April 9, 1962 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Edward V. Walsh and Roselle M. Walsh (O.R. Book 107, Page 306)

i. Reservation of a right-of-way easement for all the usual purposes of ingress and egress in and under the West 30 feet of the above described premises. The reservation shall run with the land and shall insure to the benefit and use of the owner/s of said described premises and to the owners of the contiguous lands bordering and touching said right-of-way easement.

ii. Said premises shall not be used for a junk yard, dumping ground or for the accumulation of garbage or foul smelling matter other nuisances which may be detrimental to the comfort, health or safety of the inhabitants of the surrounding community.

iii. There shall not be removed from said premises any quantity of soil, which will lower the uniform grade of the property.

iv. Said premises shall not be purchased or occupied by any person other than a member of the Caucasian race.

v. Reservation by the State Board of Education of Florida, and their successors, title to an undivided three-fourths of all Phosphate, minerals and metals, and title to an undivided one-half of all petroleum that may be in, on or under the above described land, with the privilege to mine and develop the same

C. Right-of-way easement for all the usual purposes of ingress and egress in and under the West 30 feet – April 9, 1962 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Edward V. Walsh and Roselle M. Walsh (O.R. Book 107, Page 306)

4. Site ID 459 (Parcel ID 00758680002)

A. OGM Reservation in January 28, 1958 Deed from State Board of Education of Florida to Walter G. Sorokoty, Trustee (O.R. Book 20, Page 139)

B. Restrictions in March 25, 1962 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Joseph Windsor and Josephine Windsor (O.R. Book 107, Page 198)

i. Reservation of a right-of-way easement for all the usual purposes of ingress and egress in and under the West 30 feet of the above described premises. The reservation shall run with the land and shall insure to the benefit and use of the owner/s of said described premises and to the owners of the contiguous lands bordering and touching said right-of-way easement.

ii. Said premises shall not be used for a junk yard, dumping ground or for the accumulation of garbage or foul smelling matter other nuisances which may be detrimental to the comfort, health or safety of the inhabitants of the surrounding community.

iii. There shall not be removed from said premises any quantity of soil, which will lower the uniform grade of the property.

iv. Said premises shall not be purchased or occupied by any person other than a member of the Caucasian race.

v. Reservation by the State Board of Education of Florida, and their successors, title to an undivided three-fourths of all Phosphate, minerals and metals, and title to an undivided one-half of all petroleum that may be in, on or under the above described land, with the privilege to mine and develop the same

C. Right-of-way easement for all the usual purposes of ingress and egress in and under the West 30 feet – March 25, 1962 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Joseph Windsor and Josephine Windsor (O.R. Book 107, Page 198)

5. Site ID 480 (Parcel ID 00753480003)

A. OGM Reservation in January 28, 1958 Deed from State Board of Education of Florida to Walter G. Sorokoty, Trustee (O.R. Book 20, Page 139)

B. Restrictions in June 1, 1960 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Nello Marzuola (O.R. Book 65, Page 327); carried forward in September 19, 1970 Warranty Deed from Nello Marzuola and Rosa Marzuola to Gene Marzuola (O.R. Book 2303, Page 993)

i. Reservation of a right-of-way easement for all the usual purposes of ingress and egress in and under the West, South and East 30 feet of the above described premises. The reservation shall run with the land and shall insure to the benefit and use of the owner/s of said described premises and to the

owners of the contiguous lands bordering and touching said right-of-way easement.

ii. Said premises shall not be used for a junk yard, dumping ground or for the accumulation of garbage or foul smelling matter other nuisances which may be detrimental to the comfort, health or safety of the inhabitants of the surrounding community.

iii. There shall not be removed from said premises any quantity of soil, which will lower the uniform grade of the property.

iv. Said premises shall not be purchased or occupied by any person other than a member of the Caucasian race.

v. Reservation by the State Board of Education of Florida, and their successors, title to an undivided three-fourths of all Phosphate, minerals and metals, and title to an undivided one-half of all petroleum that may be in, on or under the above described land, with the privilege to mine and develop the same

C. Right-of-way easement for all the usual purposes of ingress and egress in and under the West, South and East 30 feet

i. June 1, 1960 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Nello Marzuola (O.R. Book 65, Page 327)

ii. September 19, 1970 Warranty Deed from Nello Marzuola and Rosa Marzuola to Gene Marzuola (O.R. Book 2303, Page 993)

D. Grant of a perpetual right-of-way of necessity of egress and ingress to and through the West 30 feet, the South 30 feet and the East 30 feet of Section 16, Township 51 South, Range 27 East, Collier County, Florida – November 22, 1958 Easement recorded in O.R. Book 34, Page 345 and O.R. Book 34, Page 346, Public Records of Collier County, Florida.

"The said described property is to be used only for the purpose stated and the same may be improved and/or maintained by me as Trustee for the Owners or my successors for the said purpose and no liability of any kind shall be chargeable to you in connection with any such improvement or maintenance."

6. Site ID 1574 (Parcel ID 00758440006)

A. OGM Reservation in January 28, 1958 Deed from State Board of Education of Florida to Walter G. Sorokoty, Trustee (O.R. Book 20, Page 139)

B. Restrictions in June 21, 1962 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Nancy Pilmore (O.R. Book 114, Page 362)

i. Reservation of a right-of-way easement for all the usual purposes of ingress and egress in and under the East and West 30 feet of the above described premises. The reservation shall run with the land and shall insure to the benefit and use of the owner/s of said described premises and to the owners of the contiguous lands bordering and touching said right-of-way easement.

ii. Said premises shall not be used for a junk yard, dumping ground or for the accumulation of garbage or foul smelling matter other nuisances which may be detrimental to the comfort, health or safety of the inhabitants of the surrounding community.

iii. There shall not be removed from said premises any quantity of soil, which will lower the uniform grade of the property.

iv. Said premises shall not be purchased or occupied by any person other than a member of the Caucasian race.

v. Reservation by the State Board of Education of Florida, and their successors, title to an undivided three-fourths of all Phosphate, minerals and metals, and title to an undivided one-half of all petroleum that may be in, on or under the above described land, with the privilege to mine and develop the same

C. Right-of-way easement for all the usual purposes of ingress and egress in and under the East and West 30 feet.

i. June 21, 1962 Warranty Deed from Walter G. Sorokoty, Trustee and Individually, joined by spouse, Irene Sorokoty, to Nancy Pilmore (O.R. Book 114, Page 362)

ii. July 12, 1990 Quit Claim Deed from Kathleen Henderson to Forest L. Henderson, Jr. and Kathleen Henderson, Trustees of the Henderson Family Trust dated July 12, 1990 (O.R. Book 1551, Page 439)

Appendix J SITE OBSERVATIONS

Parcel Site ID 803

Parcel #803 Photo Location Map

This property is 100% fallow agricultural land at the time of this site walk. However, obvious plant rows, raised beds and drainage / irrigation swales and canals are present. The outfall pipes did not have pumps connected but there was evidence of a recent discharge from this property onto the parcel ID #1207, the state lands, located immediately to the south. The groundcover appears to be primarily herbaceous with dense torpedograss and other incidental species. The entire field could be chemically treated to quickly eliminate the undesirable species if this site were used as part of the restoration project.

Florida panther could potentially use this site in limited capacity due to the absence of any significant shrubby or forested habitat. Wading bird species may forage in the old ditches / swales seasonally, but it is not regionally significant habitat. Other listed species' potential use of this parcel would be low due to the highly disturbed nature of the site and lack of any significant natural habitat.

Tack #5 - Panoramic view from SE corner berm showing fallow ag land on parcel looking north

Tack #6 - Panoramic view from SW corner berm showing fallow ag land parcel looking north

Parcel Site ID 1920

Parcel #1920 Photo Location Map

The eastern half of this property consists of fallow agricultural land and improved pasture that is vegetated by Bahia grass, broomsedge, and various other herbaceous species. The southern section of this old agricultural habitat is being overrun by wax myrtle and other shrubby species due to lack of mowing / grazing. The eastern half of the site appears to be vegetated by both upland and wetland species based upon aerial interpretation of the vegetation. The wetlands include cypress, red maple, cabbage palms and other incidental species. It appears from observations at the northern property line that Brazilian pepper, java plum and old-world climbing fern have heavily invaded significant areas within both the wetland and upland communities on site, especially around the perimeter and disturbed portions of the site. The uplands are vegetated by a mixture of slash pine, cabbage palm and scattered oaks with wax myrtle / salt bush in the understory. Brazilian pepper and java plum have heavily invaded these communities.

Listed species' use of this parcel would be marginal in the old agricultural lands due to the absence of suitable native habitat. The crested caracara may have marginal potential for use of the old farm fields if cabbage palms are present along the perimeter of the fields or on the edge of the forested habitats. The eastern section of the site could potentially be used by big cypress fox squirrel, Florida panther, Florida bonneted bat, and red cockaded woodpeckers could be present in the large pines along the eastern side of the site, but there is limited suitable forage habitat in the general area.

Tack #7 - Looking west through fence row into adjacent property showing fallow ag lands on east side of that parcel

Tack #8 - Looking west into fallow ag lands on parcel adjacent to state lands site

Parcel Site ID 1207

Parcel #1207 Photo Location Map

This property contains a large area that was previously farmed but has been fallow for years. It has revegetated with a dense mixture of nuisance and exotic species with a few desirable native species throughout. Cattails, willow, primrose willow, torpedograss, Old World Climbing Fern, swamp fern and Boston fern, scattered cabbage palms, red maple saplings and strangler fig make up the dominant species with numerous other incidental species present in the groundcover. Brazilian pepper is scattered to abundant throughout this old farm field becoming very dense along the disturbed edges.

The recreational central trail creates an impediment to sheet flow which generally tries to flow south. There are a few culverted / bridged passages under the central trail to allow water to pass without damaging it. The majority of the property north of the central trail is dominated by pine flatwoods and hydric pine communities. There are numerous palmetto islands within the pine forest habitats, and they are scattered throughout the other pine communities with little or no understory. Grasses are abundant, and there are numerous rocky outcroppings where the limerock is close to the surface. The northeastern corner of this part of the property contains a forested cypress community which makes up the western quarter of this part of the site. The cypress are replaced by pine reaching the central trail where it meets

the western property boundary. Brazilian pepper is scattered throughout but is more abundant around the edges along the cleared perimeter maintenance trail / fire break. Scattered melaleuca and Old World climbing fern were also present in notable numbers.

South of the central trail the pines are abundant in the northern part of the property and palmetto islands are scattered, but not as abundant as in the north. This part of the site also has several sawgrass dominated depressional wetlands that are interconnected and provide a natural path for sheet flow to move south through this part of the site. Cypress are present as scattered trees within the hydric pine communities south of the central trail but are not very abundant. Brazilian pepper is present throughout, but not problematic. However, a controlled burn had recently been performed on this area south of the central trail and many of the shrubby species were not recognizable due to the fire damage.

Farther to the south, and north of the roadway along the southern boundary of this site mangroves become a significant part of the vegetative community. There are several deeper ditches, creeks, canals throughout this part of the site which are interconnected. These waterways are interconnected and eventually collect most of the water flowing through the site and direct it under the bridged crossing at the roadway on the southern end of the site. Brazilian pepper has heavily invaded these mangrove wetlands and is abundant throughout the general area. Access into this southern habitat was limited by the canals / waterways so some of these observations were made from a distance and using aerial photos on Google Earth.

Generally, the center of the northern part of the site is higher and water finds its way to the east and west to move south. There are low areas throughout the site that may seasonally have shallow running water but it's difficult to identify those at this time of the year. The site will tolerate sheet flows in most areas, but care must be taken so the hydrology isn't increased enough to stress or kill the abundant pines throughout the northern half of the site. There are enough natural flow ways that additional sheet flows could be accommodated without significantly altering the vegetative communities.

The fallow farm field located in the northern end of this state lands site has little to no potential for listed species use due to the extensive growth of nuisance and exotic vegetation throughout this general area. There are very few trees present and the groundcover growth is very dense.

The remainder of the state lands property is managed using fire and periodic exotic maintenance events resulting in a property with moderate to good potential for use by listed species. Big cypress fox squirrel, Florida panther, Florida bonneted bat would have moderate to good potential to be present on the property. Red cockaded woodpecker would have fair to moderate potential to be present in the pine dominated habitats but the new growth pine habitat with sapling to small pines present in dense numbers is lacking throughout the general area. The high caprock and high summer water table limit the potential for gopher tortoises to be present; however, it was noted that a burrow study was performed in 2020 which identified both abandoned and potentially occupied burrows south of the fallow farm field. The canals and open water ways in the southern end of the property would provide suitable seasonal forage / roosting / nesting habitat for many species of listed wading birds. Wood stork forage habitat is present is several areas throughout the southern section of the site.

Tack #36 - Looking north into state park property from San Marco Road showing wetlands / mangroves north of canal along south property line, west of last picture

Tack #37 - Looking north at canal along southern property line showing dense mangroves along both sides of waterway as far as you can see to the north.

Parcel Area ID 13

Parcel Area ID 13 Photo Location Map

This parcel is dominated by cypress, scattered cabbage palms, and a few red maples with a dense understory of Brazilian pepper. The boundary along the US 41 canal is heavily invaded by exotic grasses such as torpedograss, cogon grass, and other undesirable species. The site is highly disturbed and functions as a wetland, but as shown by the dense exotic infestation throughout, it is not functioning as a healthy system. Historically this area most likely experienced a much longer and better hydroperiod. The site is currently surrounded by canals that drain the property and significantly reduce the hydroperiod. Exotic grasses are abundant along the open southern edge adjacent to US 41 and Brazilian pepper is dense throughout forming the midstory of most of the forested system.

Potential listed species' use would be the big cypress fox squirrel (moderate due to dense exotics), Florida bonneted bat (limited due to dense exotics in the midstory and low canopy), Florida panther, wood storks and wading bird species (use would be limited to the canals around the perimeter of the property). Generally the current heavy infestation of Brazilian pepper would limit the use of the site by most listed species.

Tack #1 - Looking north at eastern end of triangular parcel north of US 41

Tack #2 - Looking north in small triangular parcel near east edge showing cypress with exotic dominated understory

Tack #3 - Looking north from US 41 near center of triangular parcel showing historic cypress wetland with dense pepper understory

Tack #4 - Looking north near eastern end of small triangular parcel showing dense pepper understory

Parcel Area ID 8

Parcel #8 photo location map – North is Image Right

A majority of these parcels are vegetated by pine communities that are a mix of upland and wetland communities. Pine flatwood communities were abundant throughout the lots observed. The hydrology appears to have been significantly altered, but the lower elevation wetland communities are still healthy and functioning as wetlands. Brazilian pepper, java plum and melaleuca were all observed in varying densities throughout these parcels. Java plum has heavily invaded the northern end of this strip of parcels while Brazilian pepper and melaleuca are more abundant in the southern parcels. The exotics are dense enough to affecting the overall function of the habitat in this general area. Numerous bromeliad species and a few butterfly orchids were also observed on trees within these parcels. Generally, the hydrology appears to have been altered from historic conditions. The lower elevations appear to fill with water seasonally but have no obvious connections offsite. Cypress and pine wetlands were observed in the north / central and southern ends of these properties. The adjacent parcels are developed with scattered residential homes on either side of these focus parcels. Not knowing the seasonal flow direction or depth of water on these parcels presents the potential for adverse effects on adjacent parcels if the hydrology were to be changed from its present condition.

Big Cypress Fox Squirrels were observed on site and there is abundant potential habitat for Florida bonneted bat utilization within these parcels. If red-cockaded woodpeckers are anywhere in the vicinity, that species could also be present, using the pines on site as forage or cavity trees for roosting / nesting. Florida panther could also be present even though the exotic densities on site are moderate to abundant. There is limited habitat where seasonal open water would be potentially present which limits the potential for listed wading bird species (including wood storks) to be found on site.

Tack #40 - Looking east into undeveloped lots from road – note all cocoplum that apparently froze this winter

Tack #41 - Internal lot looking south showing pine / melaleuca / cocoplum with little groundcover

Tack #41 - Internal lot looking north showing pine, melaleuca, oak sparse groundcover

Tack #42 - East side of cleared lot north of internal lots showing cypress, pine mix

Tack #42 - Looking south into internal lots from cleared lot

Tack #43 - Partially cleared powerline easement across north end of residential lots

Tack #44 - Looking west into lots from trail in northern end of lots showing dense exotics including java plum, Brazilian pepper and abundant slash pines

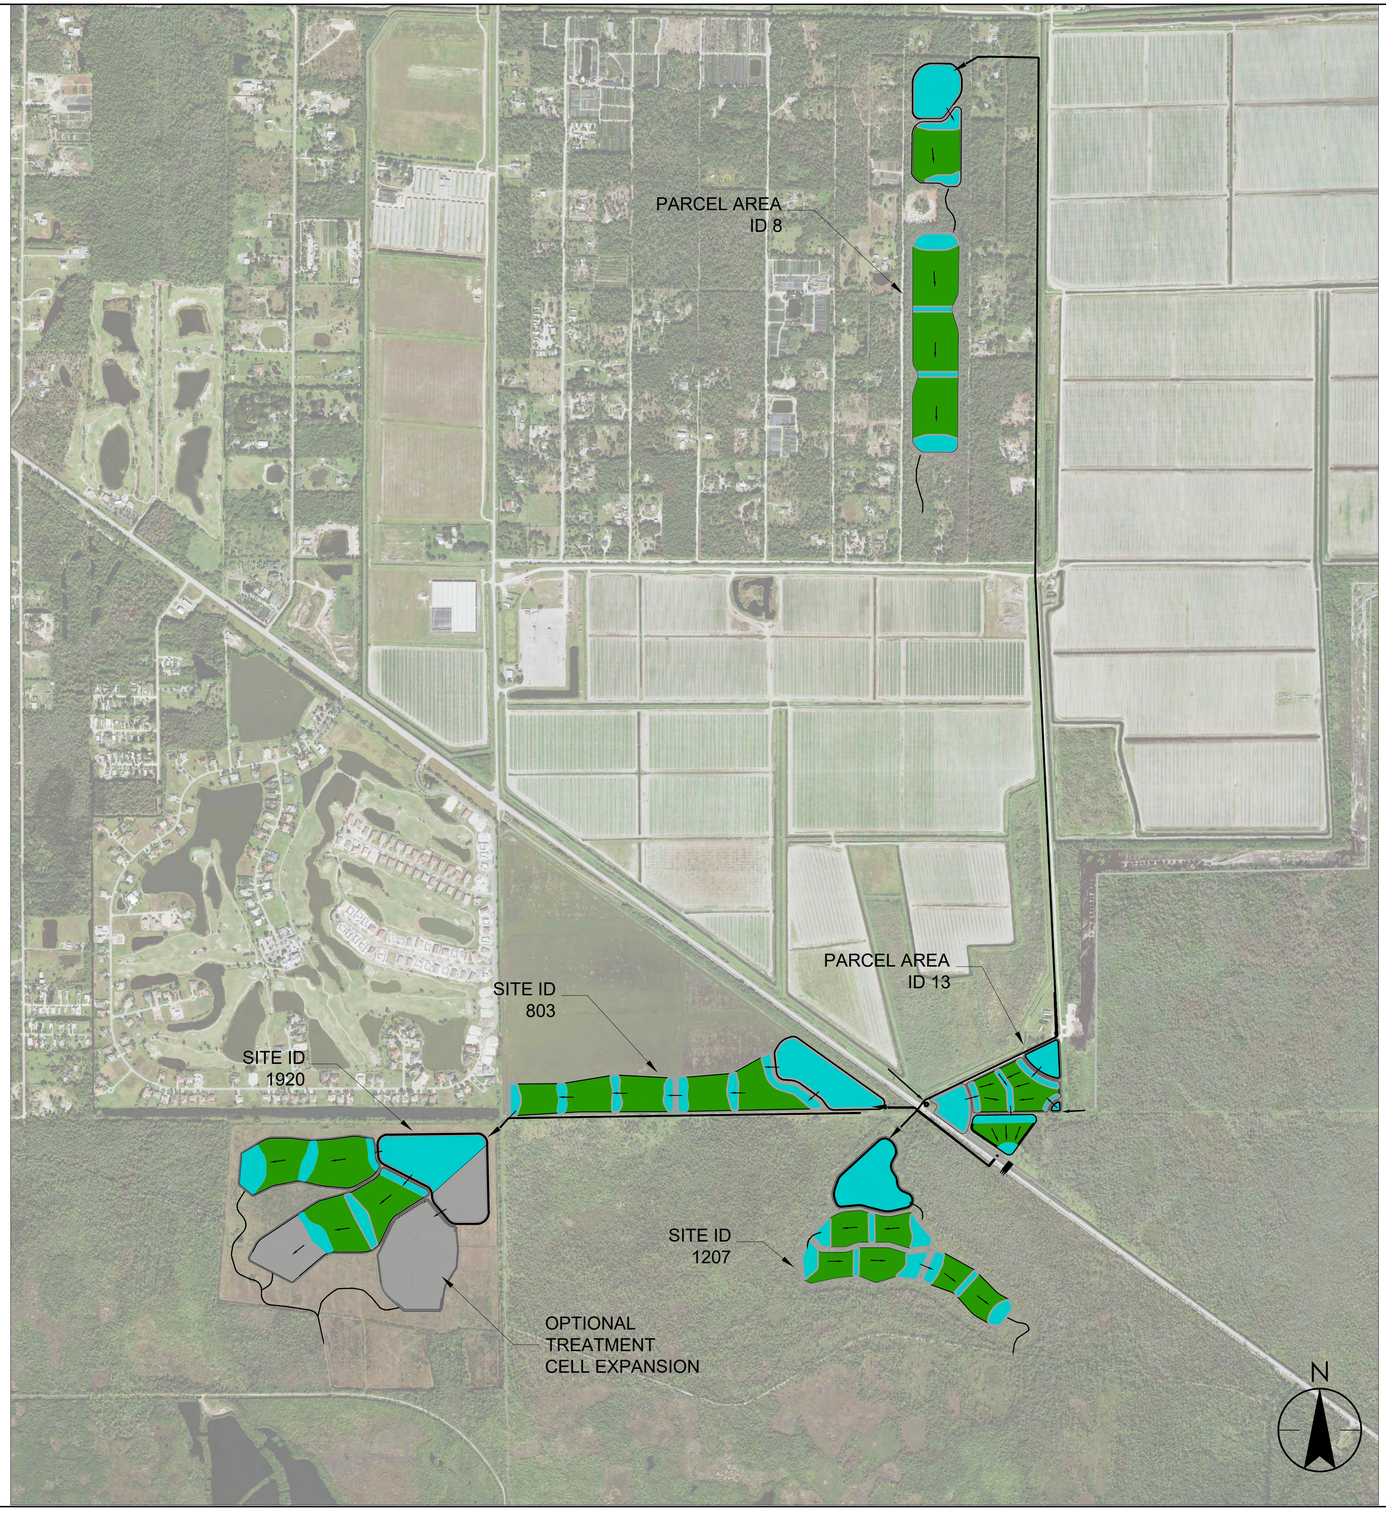

Tack #45 - Farther south along eastern trail looking west into lots showing oaks / pines and java plum with fern understory

Tack #46 - Farther south on east side trail showing java plum, pines and undesirable species in pine flatwoods

Notes:

1 Land Acquisition Costs were taken from the Property Appraisers Website (Area 8 - $16,000/ac; Area 13 - $8,347/ac & $0 for publicly owned; Parcel 803 - $8,347/ac; Parcel 1207 - $0 for publicly owned; Parcel1920 - $33,625/ac).

2 Land costs for privately owned lands if purchased at market value are likely to be significantly higher that Property Appraiser estimates and should be appraised to determine a more accurate acquisition cost.

3 Publicly held land is not acquired; however, there may be negligible costs to lease or obtain an agreement or authorization to use.

4 The capital project costs developed in this table have been prepared at a schematic/conceptual rough order of magnitude level and are not based on a final design and are therefore provided here for comparative value only.

Appendix M WATER QUALITY BENEFIT CALCULATIONS

Re: MIKE SHE modeling of proposed retention areas close to US-41 and Tomato Roads.

Background

Stantec contacted Lago Consulting and Services in regard to MIKE SHE modeling support for retention areas proposed close to US-41 Road (Tamiami Trail) and Tomato Road as a part of the Picayune Strand Restoration Project (PSRP). In a previous effort[1], Lago developed a high-resolution MIKE SHE/MIKE11 model for the area that allowed to estimate flows through the US-41 Road culverts BR-36 and BR-37 in existing conditions.

This technical memorandum describes the MIKE SHE modeling of proposed interception, collection and treatment areas (shown in **Figure 1**) to treat surface water flows reaching the area near the intersection of Tomato Road and US-41 Road. The objective of this modeling work is to estimate flows through the collection/treatment areas and capture flows that would bypass collection, which will be provided as input for the water quality modeling to be performed by Stantec.

[1] MIKE SHE Existing Conditions Modeling downstream of BR36 and BR37 Culverts. Technical Memorandum prepared by Lago Consulting and Services and delivered to Stantec on February 4, 2021.

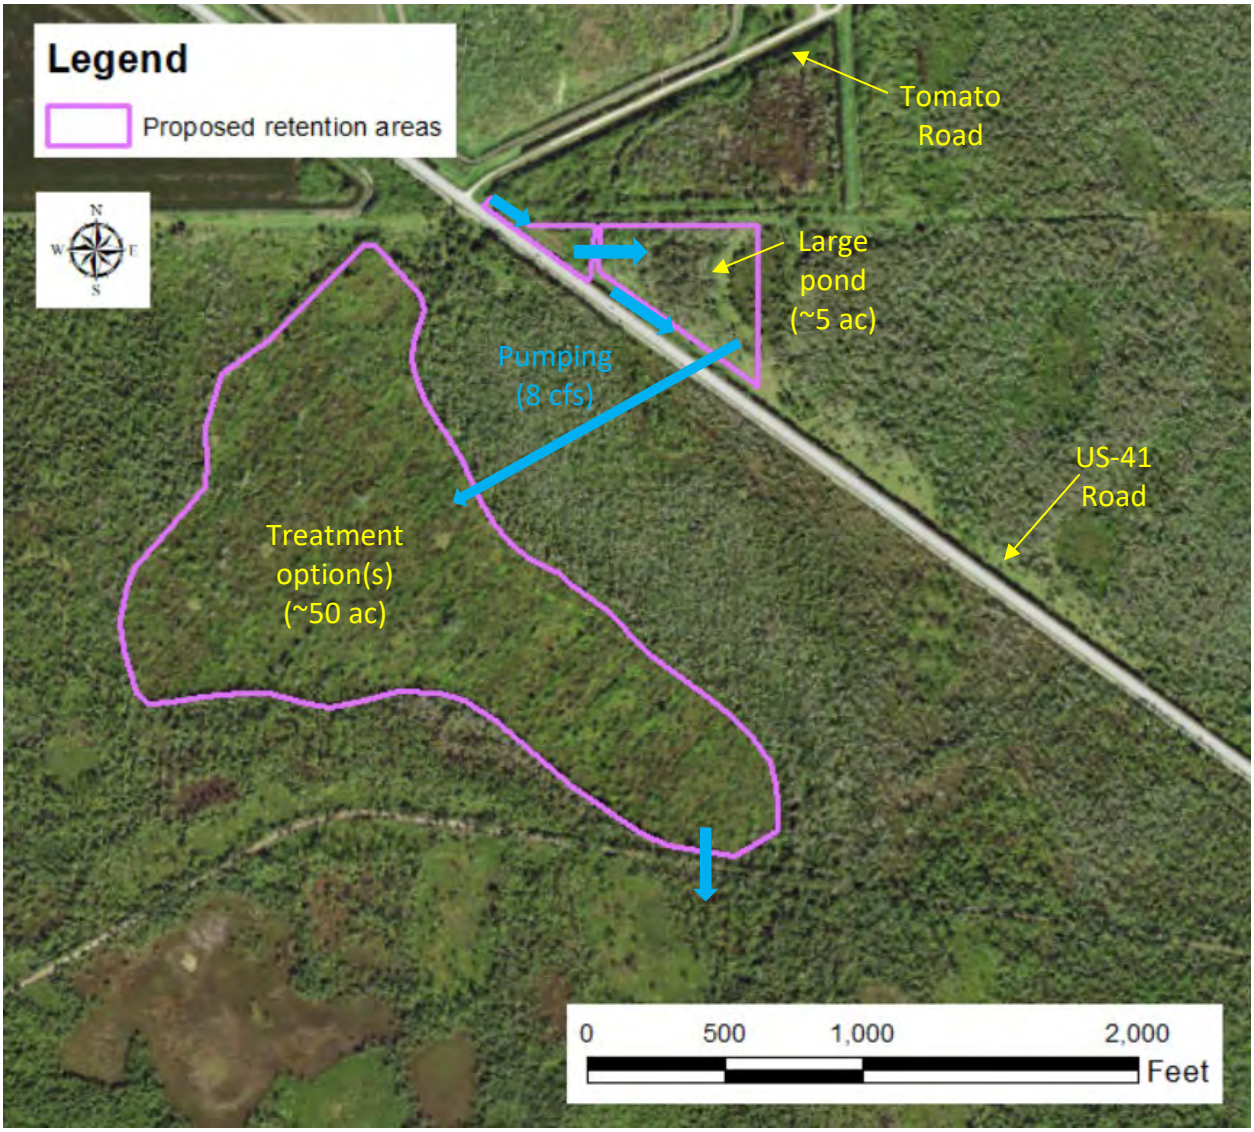

Figure 1. Proposed retention areas. Blue arrows represent conceptual water movement.

Existing Condition Model

The MIKE SHE model domain from the previous effort was extended north to include the proposed retention areas and to reduce the influence of the boundary conditions. The new model domain and grid are presented in **Figure 2**. The model grid (with grid cell size = 100 ft) did not require modification, and therefore, input spatial data from the previous effort (such as topography, rainfall and RET distribution, and water table aquifer bottom elevation) were reused.

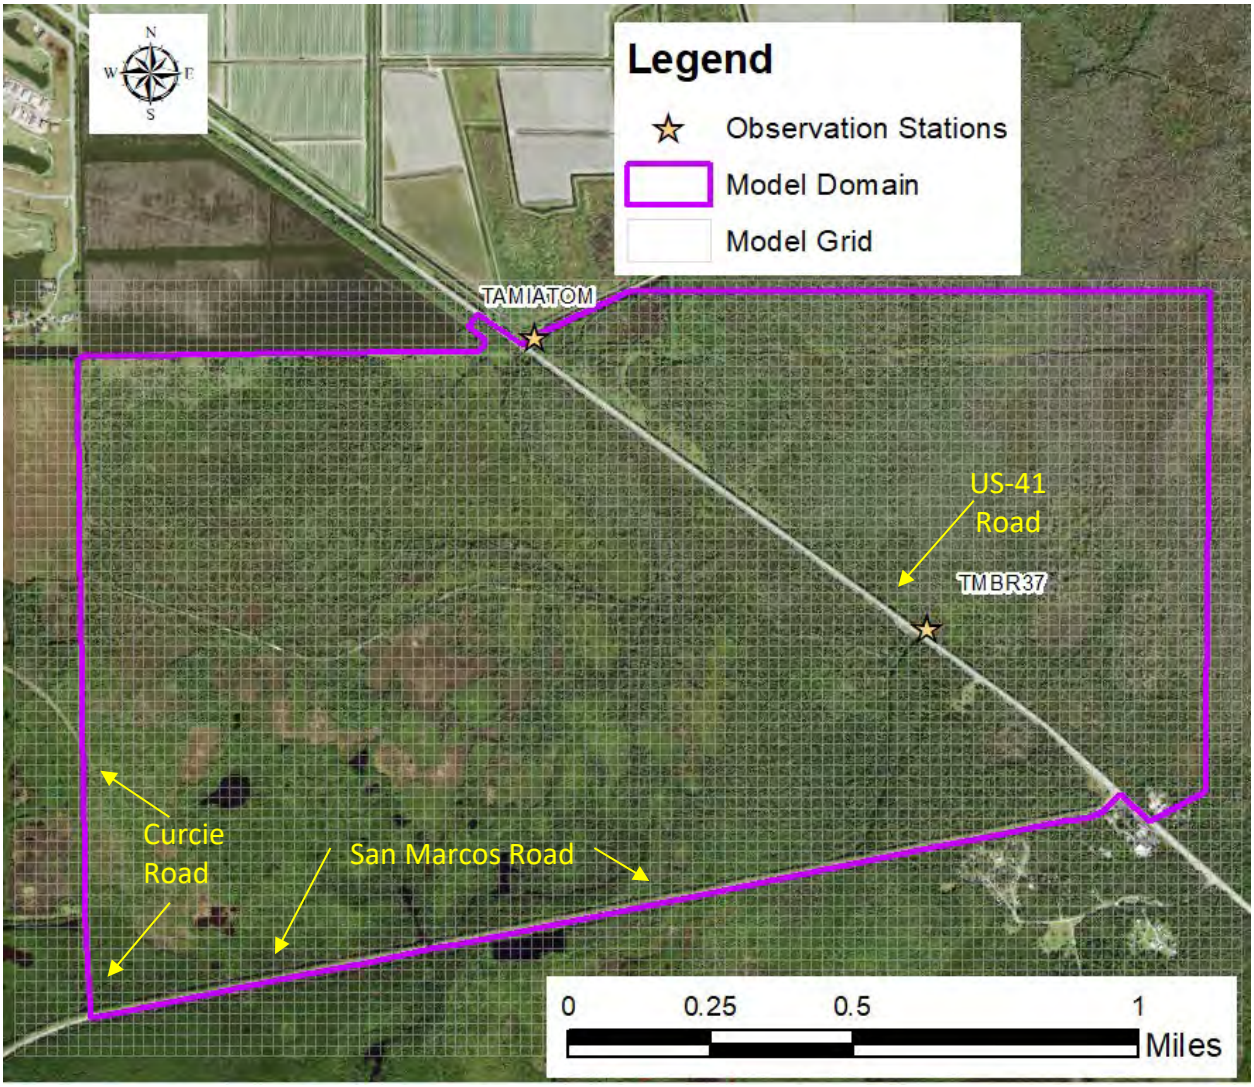

Figure 2. Modified MIKE SHE model domain and grid.

The model simulation period was selected previously from 5/1/2008 through 11/1/2008, which corresponded to the wet season higher flows as estimated by the SFWMD model[2]. In this work, however, a 9-year simulation period from 2005 through 2013 was used.

[2] Picayune Strand Restoration Project (PSRP) Water Quality Projections With "Southwestern Protective Levee" Feature. Prepared by: Compliance Assessment and Reporting Section Water Quality Bureau South Florida Water Management District. April 4th, 2020.

In the previous effort, the 100-ft model topography was obtained by resampling the 1-meter resolution LiDAR based DEM flown in 2018 and available from the USGS (which is shown in **Figure 3**). This input dataset was reused in this work.

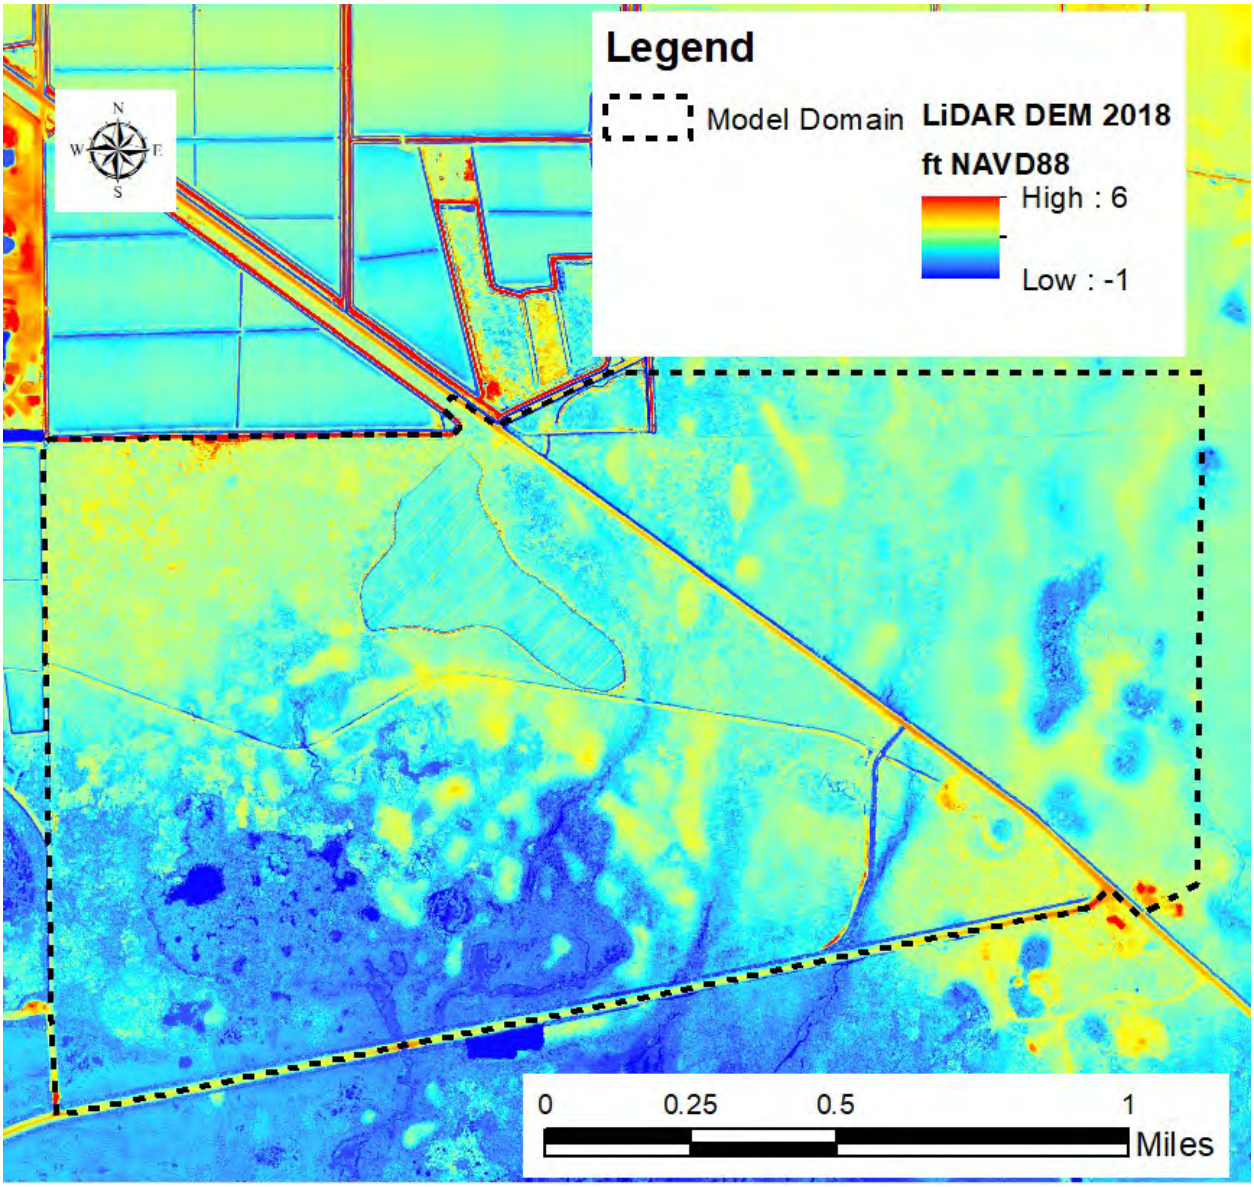

Figure 3. 1-meter resolution LiDAR-based DEM from the USGS.

As in the previous effort, NEXRAD Rainfall data was applied in the model. As can be inferred from **Figure 4**, the model domain intersects the NEXRAD pixels 46336, 46337, 46810, and 46811; for which hourly rainfall time series data were entered into the model. The time series data for those pixels were extended to current date by using the data published in DBHYDRO.

The reference evapotranspiration (RET) from the USGS is also distributed in the NEXRAD grid, and daily time series of RET rates were also inputted into this model. The time series data for those 4 pixels were extended up to year 2020 by using the latest published data. **Figure 5** shows the monthly rates of rainfall and actual ET inside the new model domain in existing conditions.

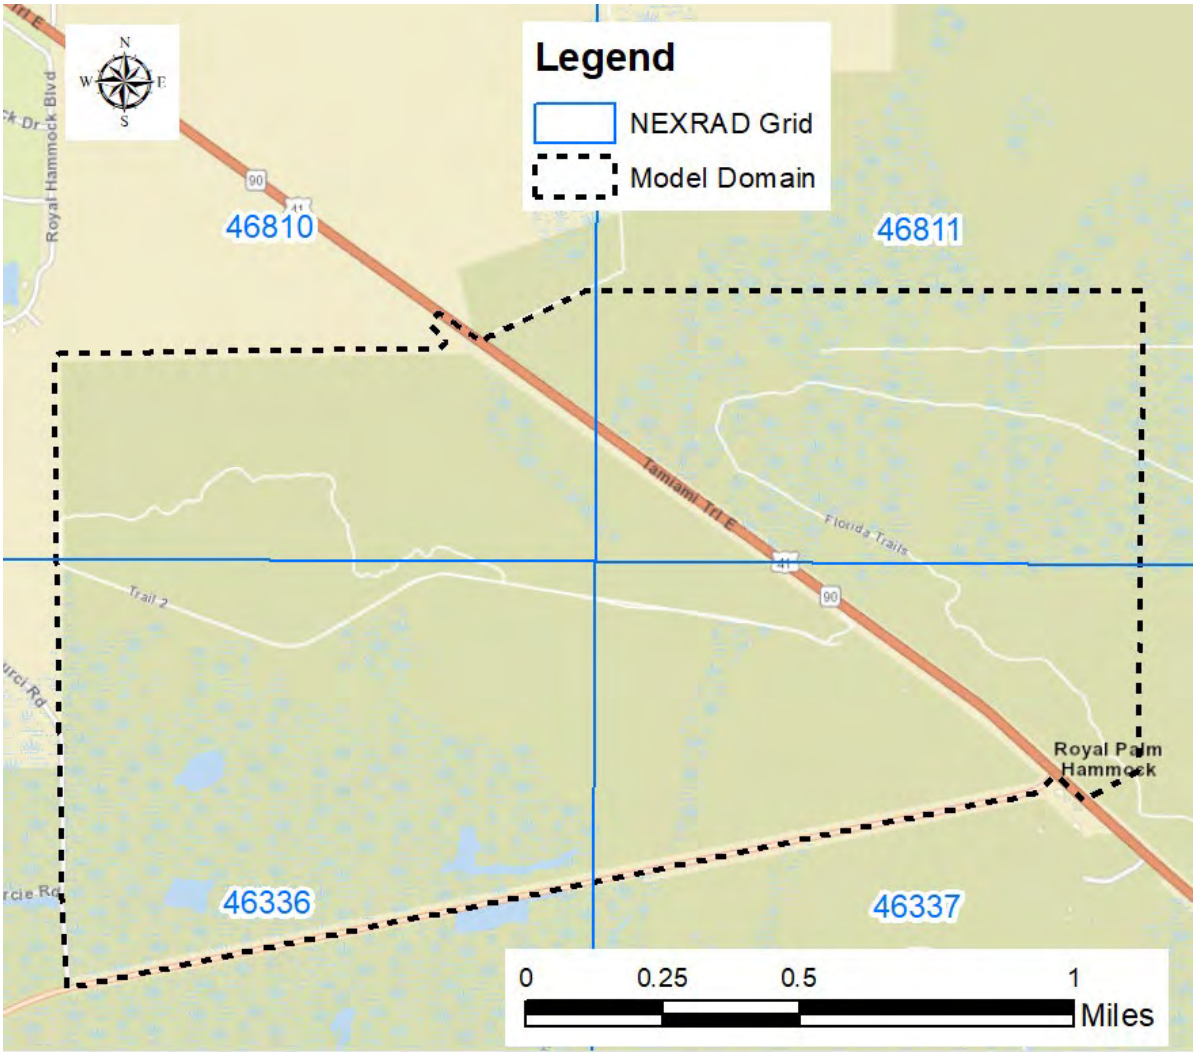

Figure 4. NEXRAD grid and pixel numbers around the model domain.

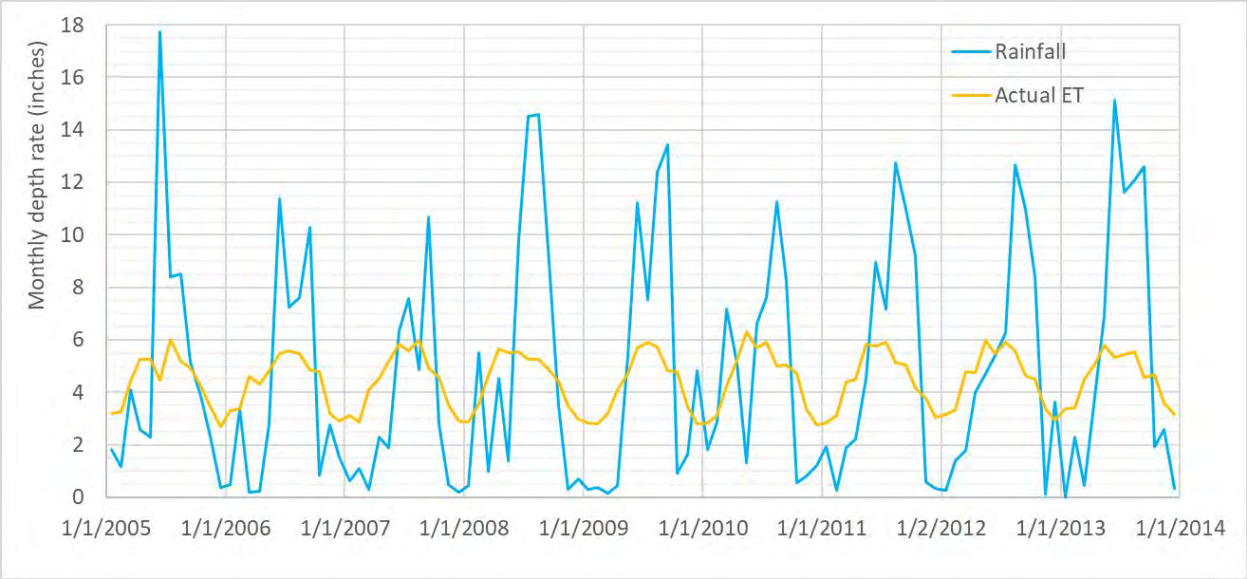

Figure 5. Rainfall and actual ET monthly rates inside the model domain for the period 2005-2013.

As in the previous effort, the vegetation coverage was assumed uniform in the model domain. A global class characterized by Marsh-type of vegetation parameters (i.e., Leaf Area Index= 3 and root depth= 750 mm) was used.
The overland (OL) flow component uses uniform parameters for the Manning's M = 2.5 and for the detention storage = 10 mm. Initial OL water depth is assumed zero. The separated OL flow areas (SOLFA) map presented in **Figure 6** is used in existing conditions, which is consistent with the MIKE SHE links divide and ensures that there is no surface water exchange at the boundary via the OL flow component.

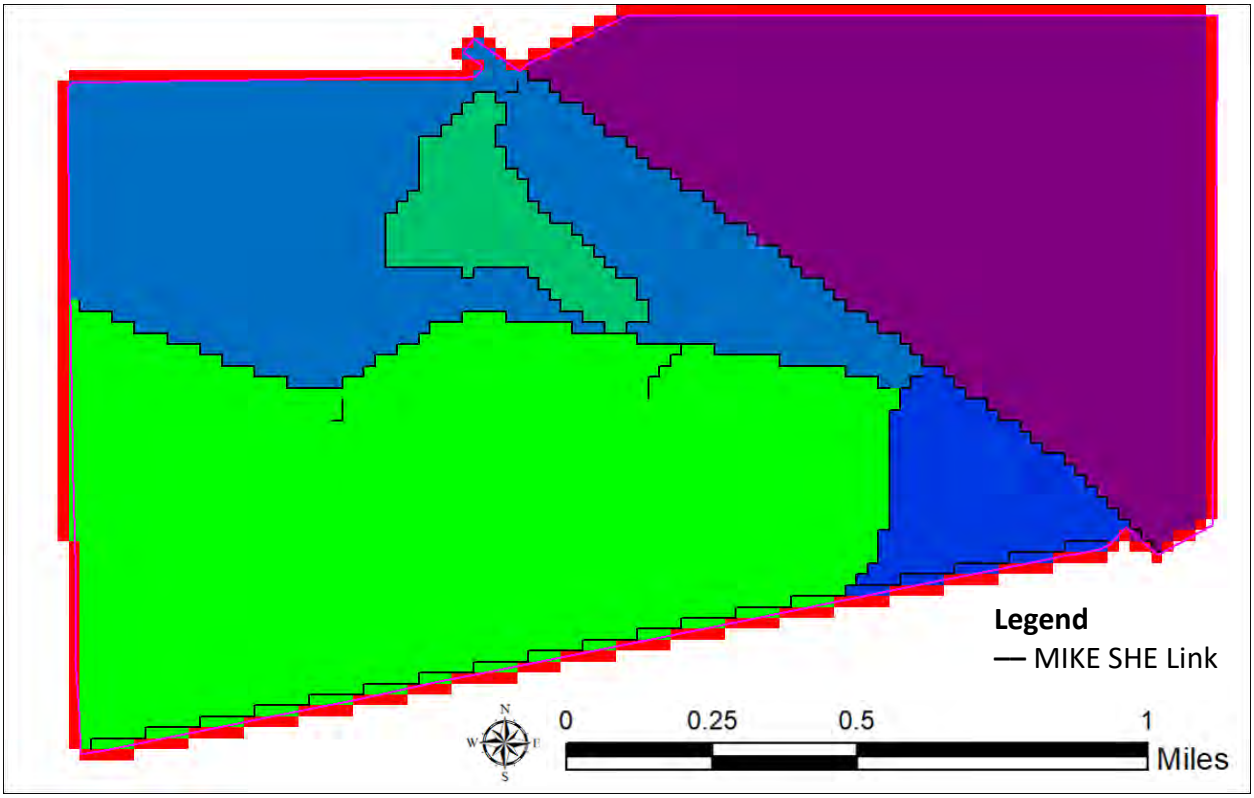

Figure 6. SOLFA map in the existing conditions model.

The simulation of vertical flow in the unsaturated zone (UZ) component utilized the 2-layer water budget method in combination with the Green-Ampt method to compute the infiltration rates. Uniform soil parameters are taken from a typical soil (NCRS MUKEY= 3102973) with water content @ saturation= 0.43, @ field capacity=0.19, @ wilting point= 0.11, vertical conductivity Kv= 9.9 ft/day, and soil suction head= 20 cm. The ET Surface depth is assumed uniformly as 10 cm.

The saturated zone (SZ) component only uses the water table (WT) aquifer. The bottom elevation and hydraulic conductivities (Kh and Kv) are taken from regional MIKE SHE models. Daily interpolated heads from observation station data were used as lateral boundary conditions. Initial heads are assumed at ground level.

Figure 7 presents the MIKE11 branches that represent ditches and other flow paths visible in the LiDAR DEM of Figure 3. They include the US-41 north ditch, the BR36 and BR37 flow paths, the perimeter ditch around the treatment parcel, the ditch on the north side of the trail and two crossings, the San Marcos Road north ditch and one crossing.

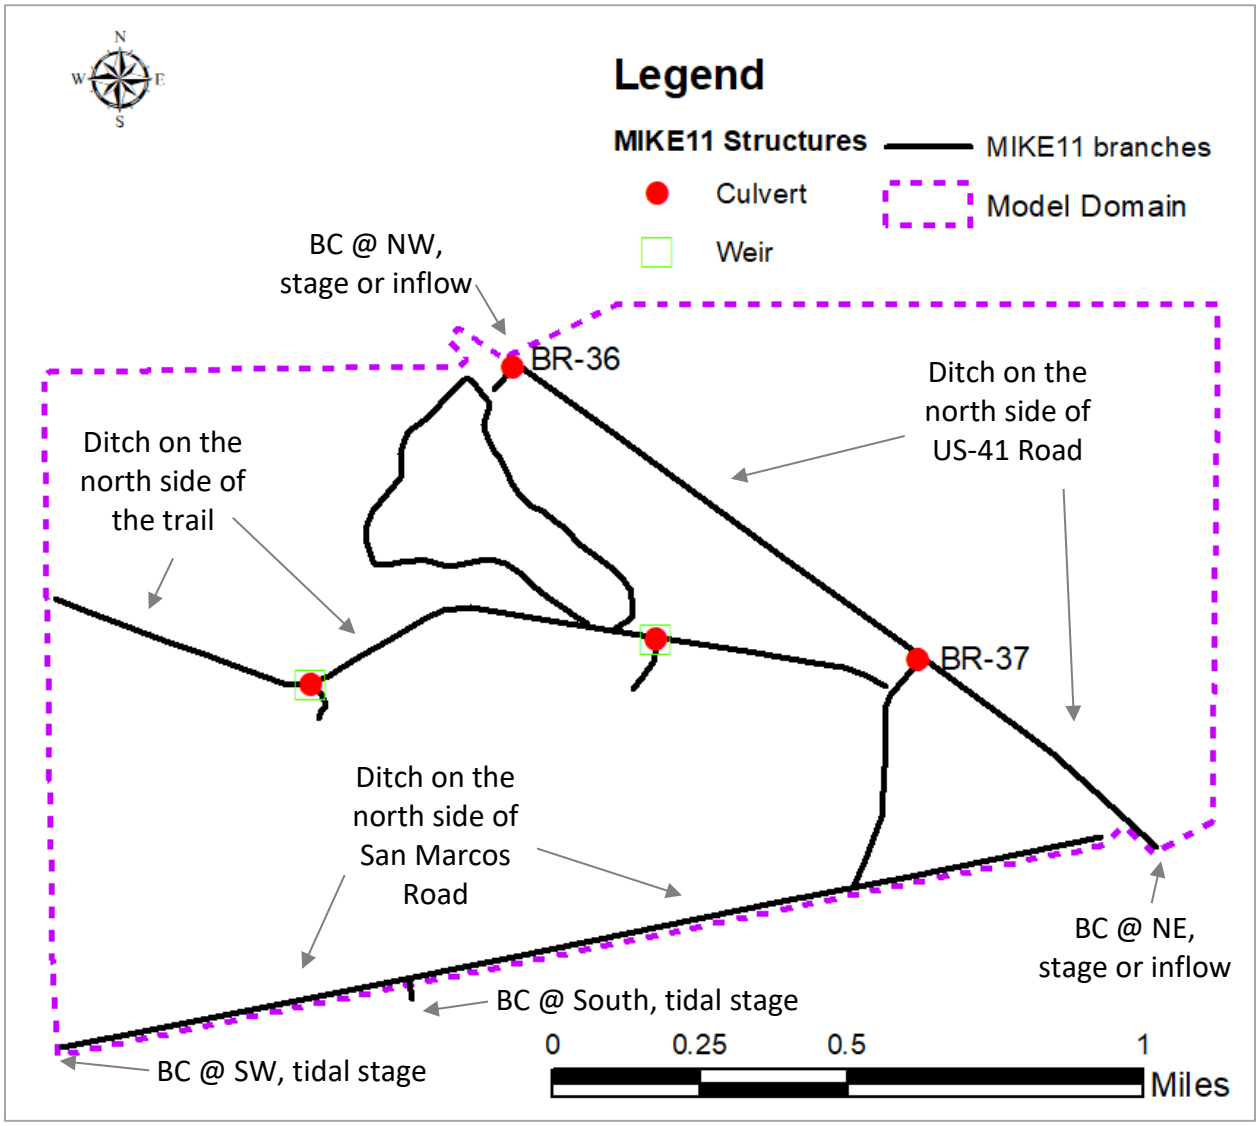

Figure 7. MIKE11 features in the existing conditions model.

MIKE11 cross sections were cut from the 1-meter resolution LiDAR 2018 DEM with a 200-ft spacing, as shown in **Figure 8**. A uniform Manning's M value of 2.5 is used for the cross sections. Cross section width is defined to match the width of the flood coded areas, which are shown in **Figure 9**.

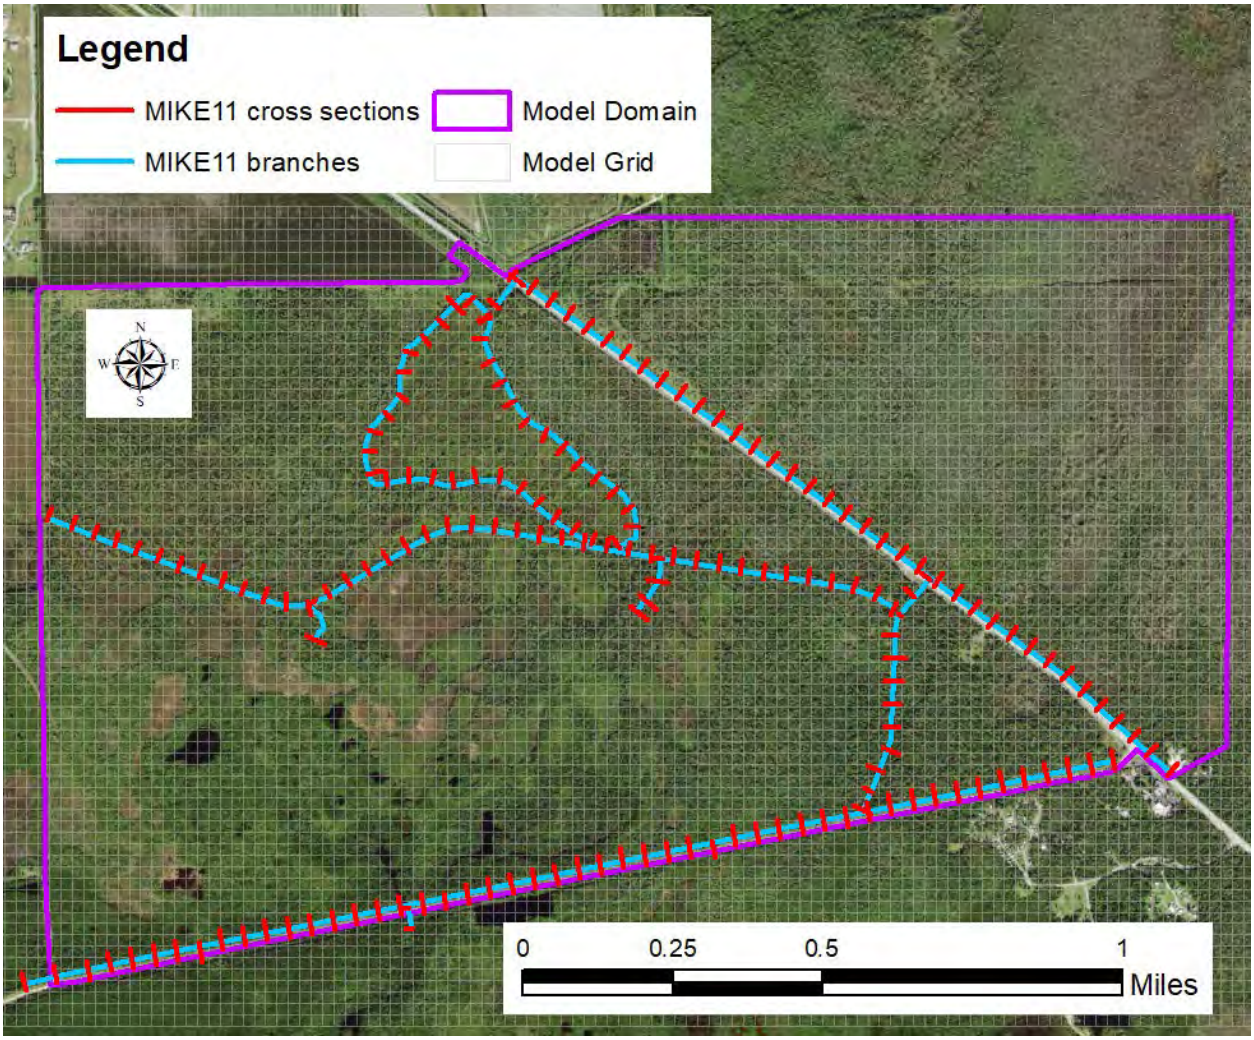

Figure 8. MIKE11 cross sections in the existing conditions model.

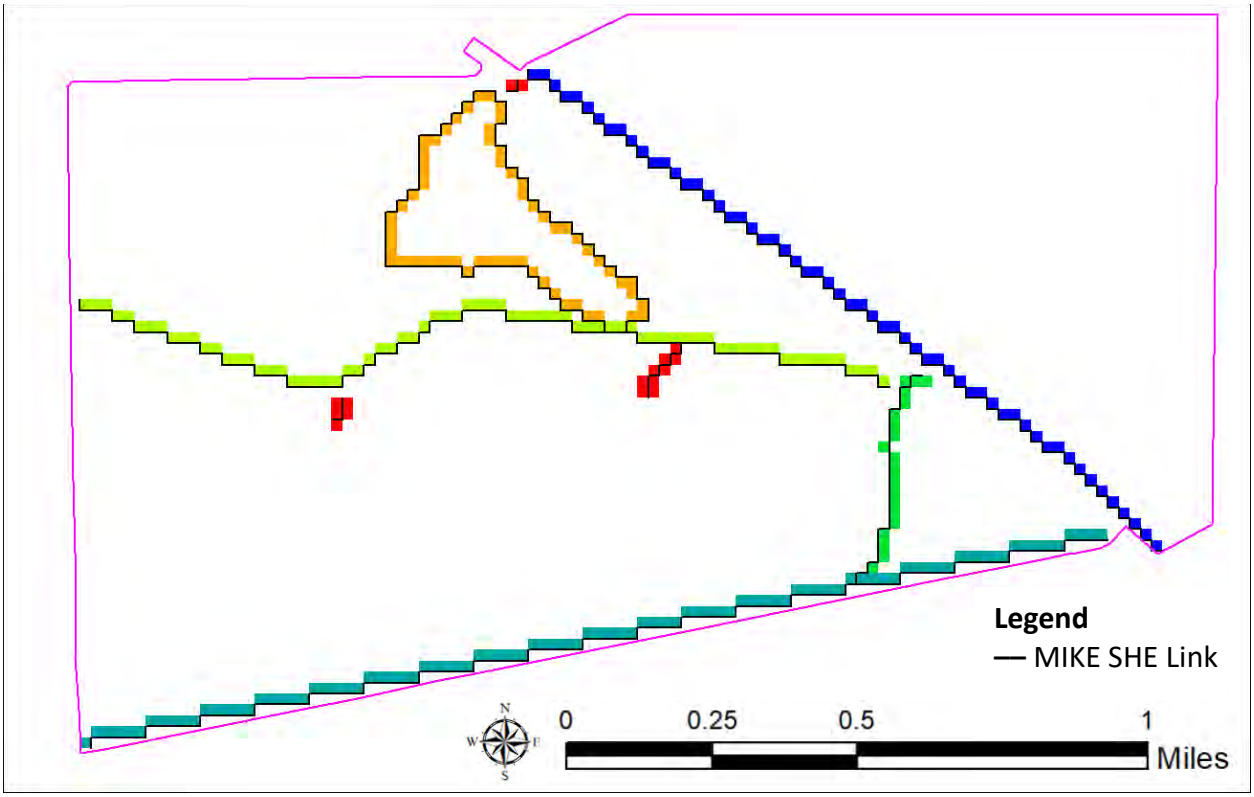

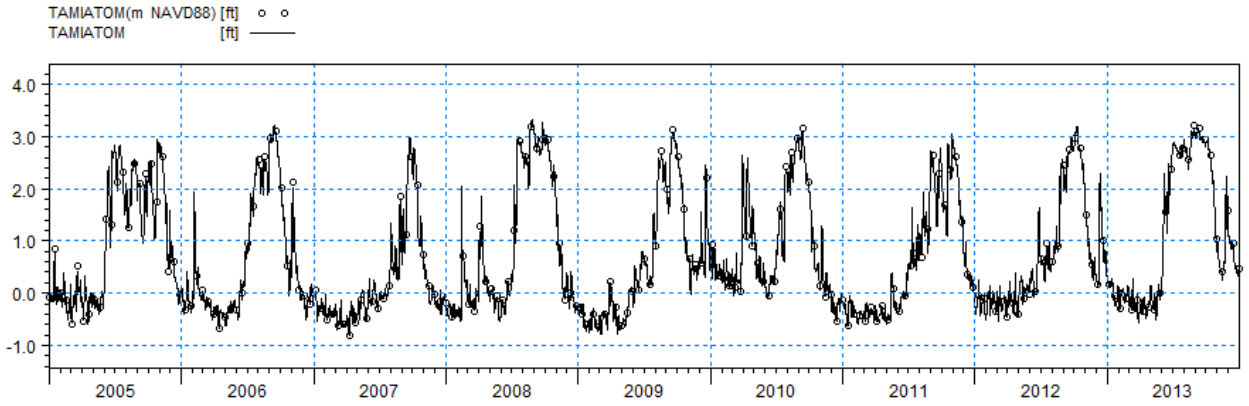

Figure 9. Flood codes map in the existing conditions model.

The culverts BR36 and BR37 are represented explicitly in the model and the geometry is extracted from regional MIKE SHE models. The two trail crossings are represented by a using a culvert plus a weir configuration. The culvert is assumed as 2 x 15" HDPE pipes and the weir represents the trail overflow.

A tidal boundary condition (BC) by using time series water level data from Naples NOAA station is applied at the south end of the branch that crosses San Marcos Road, as well as at the southwest end of the San Marcos Road ditch. Boundary conditions at the US-41 north ditch were applied by specifying flows or stages.

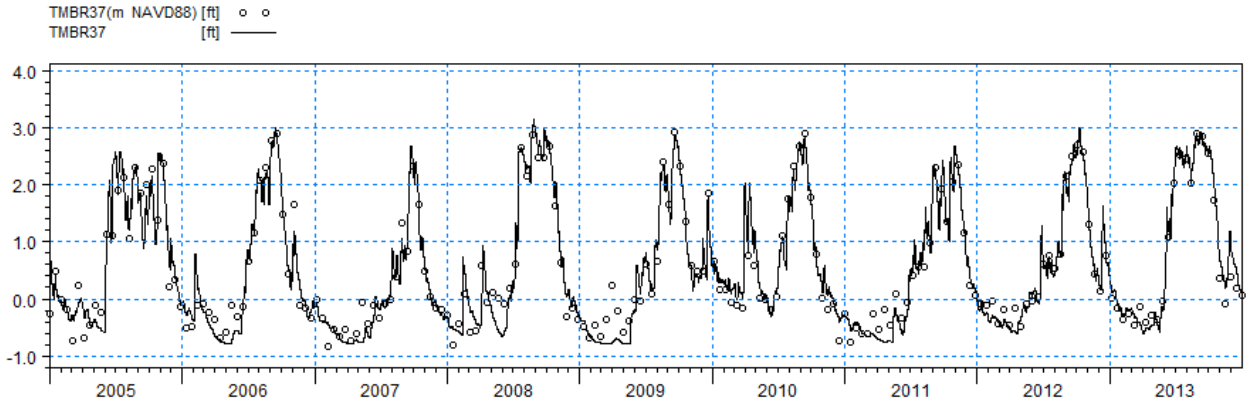

In the previous effort, Manning's M in the OL and in MIKE11 components were adjusted iteratively up to a value of 2.5 to better match the reported monthly culvert flows by the SFWMD model[2]. The adjusted Manning's M =2.5 was reused in this study.

Observed stages at TAMIATOM and TMBR37 stations were applied as boundary conditions at the ends of the US-41 north ditch in the updated model. The stage boundary conditions were then switched to inflow boundary conditions by using the previously estimated flows, as preparation for scenario evaluations. The model performance at those observation stations can be observed in **Figure 10** and **Figure 11**, respectively.

ME=0.0145802
MAE=0.0217343
RMSE=0.0344244
STDres=0.0311842
R(Correlation)=0.999695

Figure 10. Observed and model estimated stages at station TAMIATOM.

ME=0.0223392
MAE=0.193841
RMSE=0.258073
STDres=0.257105
R(Correlation)=0.971934

Figure 11. Observed and model estimated stages at station TMBR37.

Monthly averaged flows at selected locations as estimated from the existing condition model for the period 2005-2013 are presented in **Figure 12** and **Figure 13**. Notice that most of the inflow at Tomato Road (i.e., at the NW boundary) passes through the BR-37 culvert and crosses San Carlos Road to end at the tidal boundary labeled as "BC @ south".

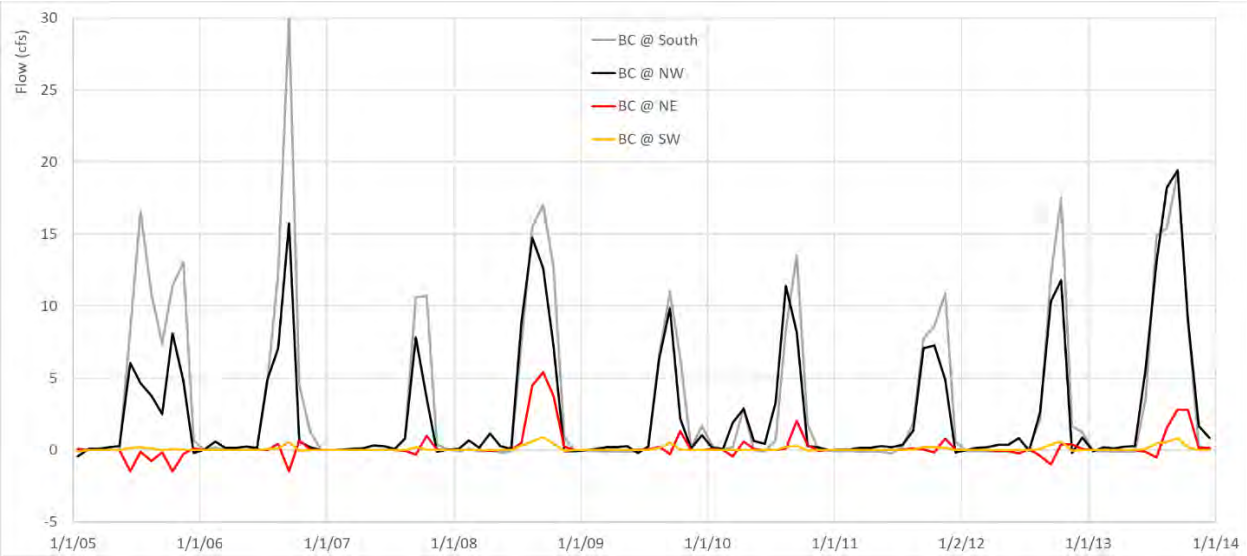

Figure 12. Model monthly-averaged flows at the model boundaries estimated in existing conditions.

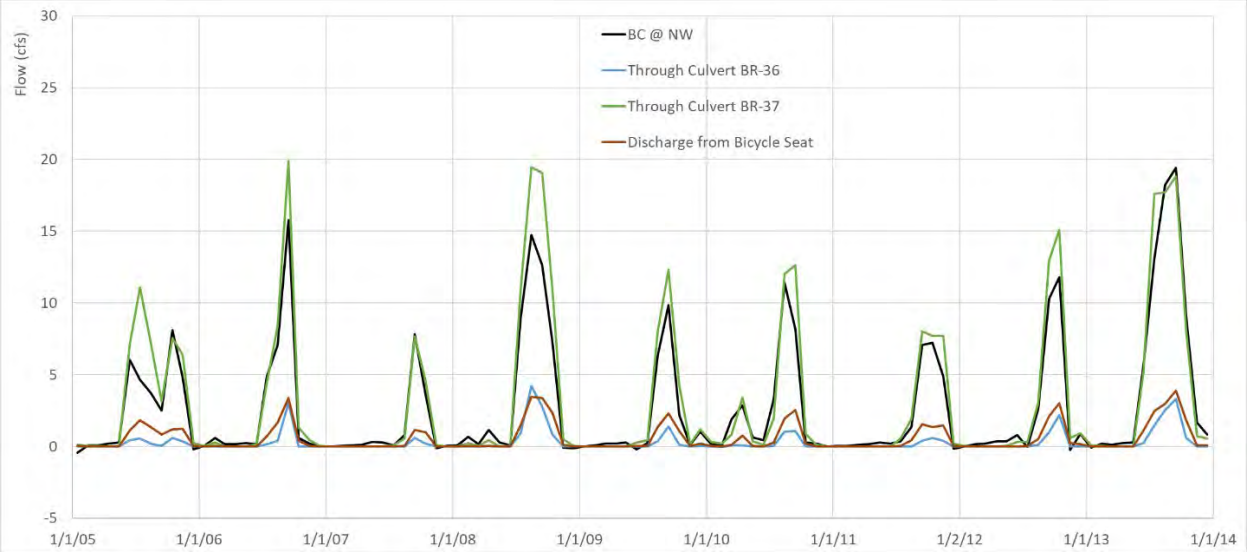

Figure 13. Model monthly-averaged flows at the NW boundary and through the US-41 Road Culverts estimated in existing conditions.

Figure 14 compares the total monthly-averaged flows through the US-41 Road Culverts in existing conditions as estimated in this study and the ones by the regional PSRP model from the SFWMD[2]. The PSRP model includes the new culvert proposed under the US-41, but not the additional flow resulting from the PSRP implementation. In some years, both models estimate similar wet season discharge volumes (which is the area below the flow peaks). In years 2008 and 2014, the model from this study estimates higher wet season discharge volumes, which is the opposite in years 2007 and 2011. **Table 1** shows that estimated flows are close in average terms. Difference in flow estimations between the two models are expected due to differences in spatial resolution, conceptualization, and input data.

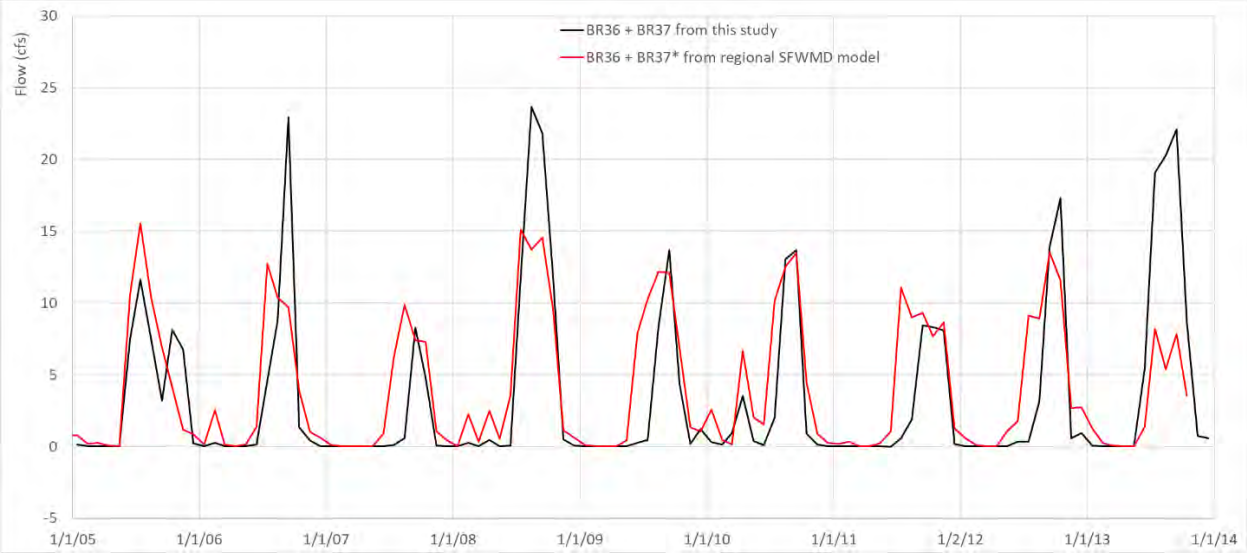

Figure 14. Total monthly-averaged flows through the US-41 Road Culverts estimated in existing conditions from two models: the small-scale model from this study and the regional PSRP model from the SFWMD.

Table 1. Total averaged flows through the US-41 Road Culverts estimated in existing conditions from two models: the small-scale model from this study and the regional PSRP model from the SFWMD.

	BR36 + BR37 average flow (cfs) period 2005-2013	
	entire year	during August
BR36 + BR37 from this study	3.5	10.1
BR36 + BR37* from regional PSRP model	4.0	10.3

Scenario with Proposed Retention Areas

The proposed retention areas were introduced into the existing condition model to build the first scenario model version. **Figure 15** shows the MIKE11 features in this scenario model. **Figure 16** and **Figure 17** also include the flood code and the SOLFA maps in this scenario.

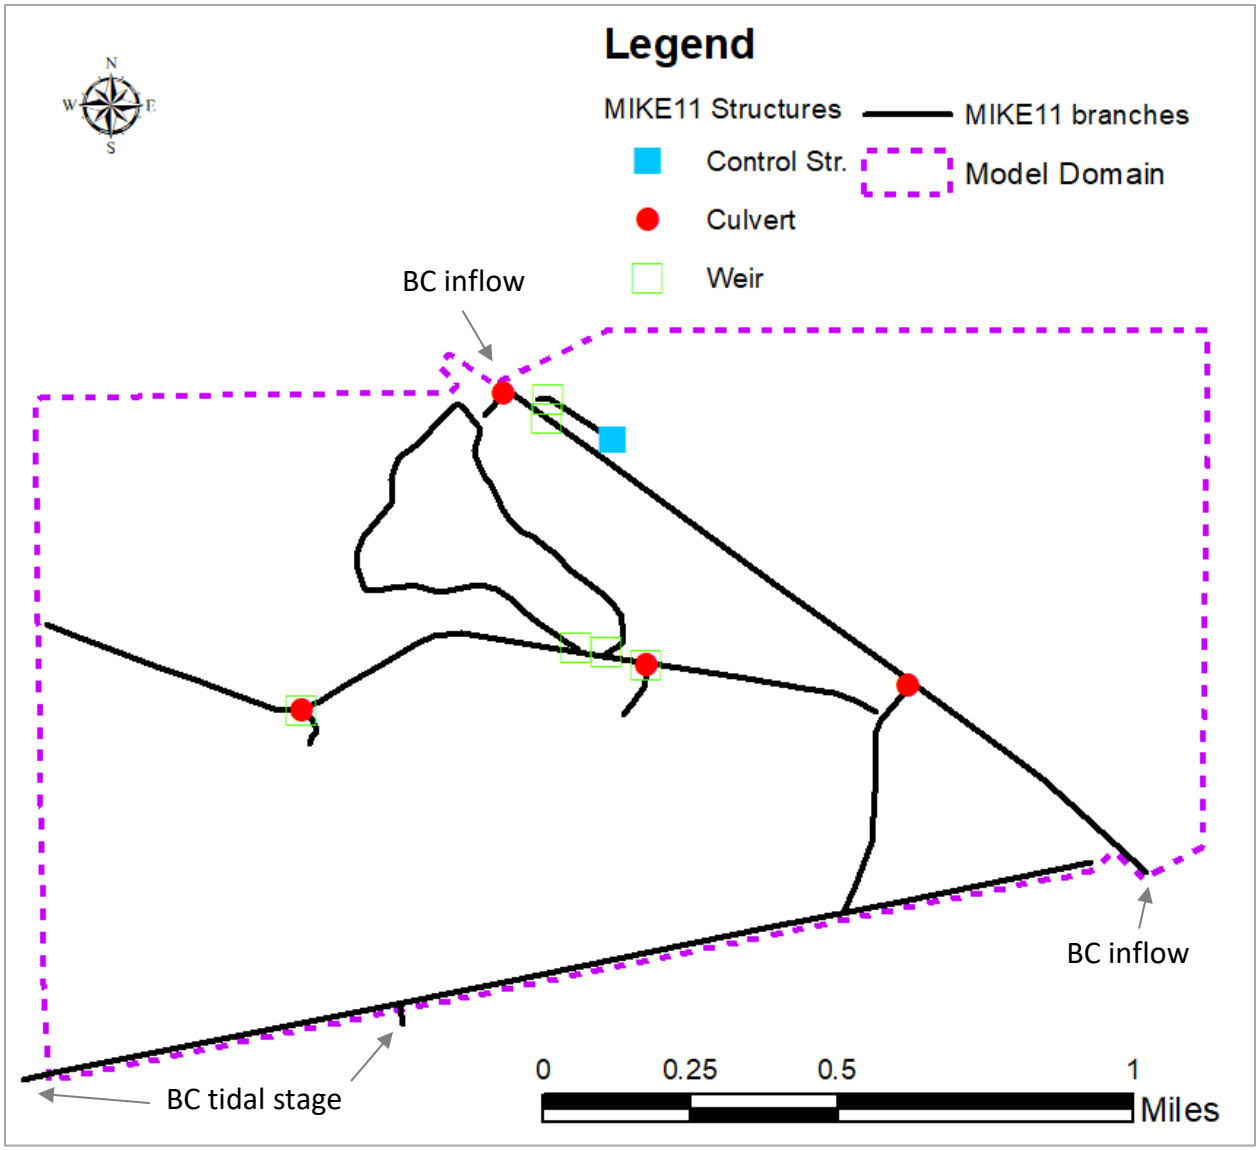

Figure 15. MIKE11 features in the scenario model with proposed retention areas.

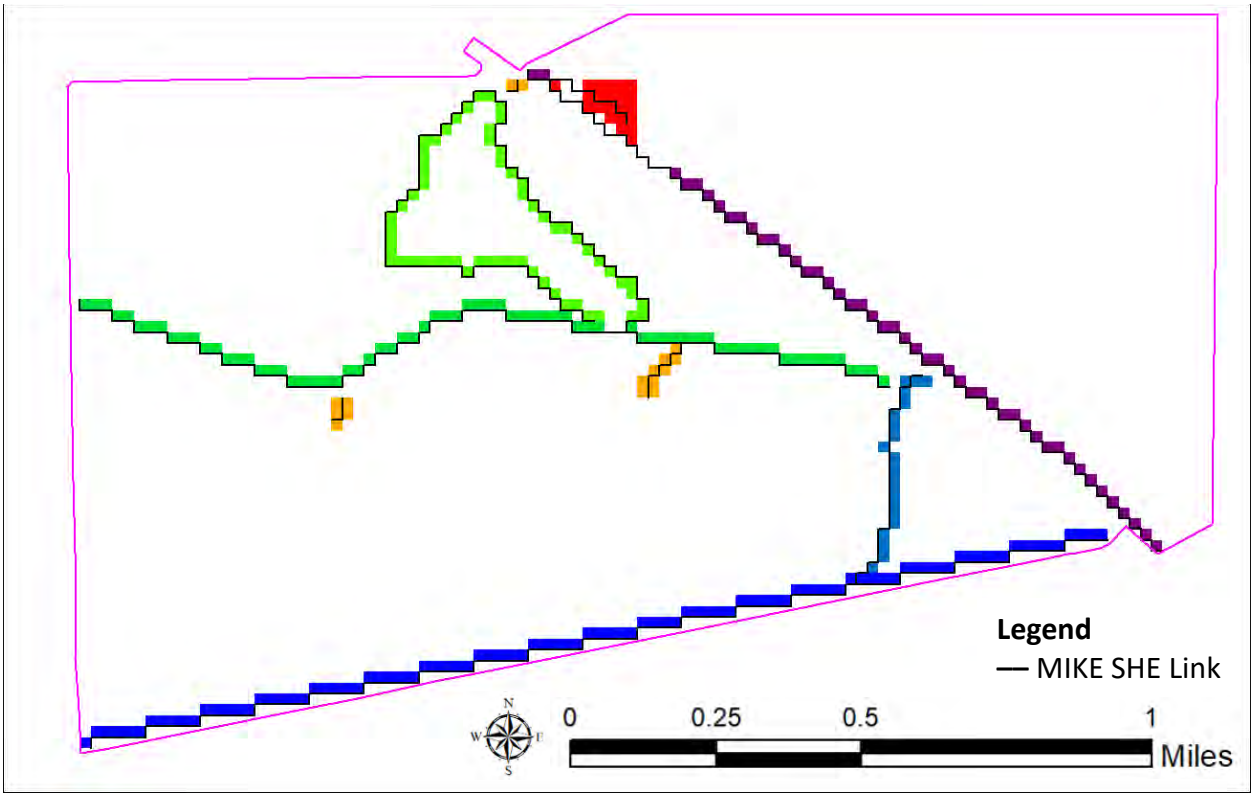

Figure 16. Flood codes map in the scenario model with proposed retention areas.

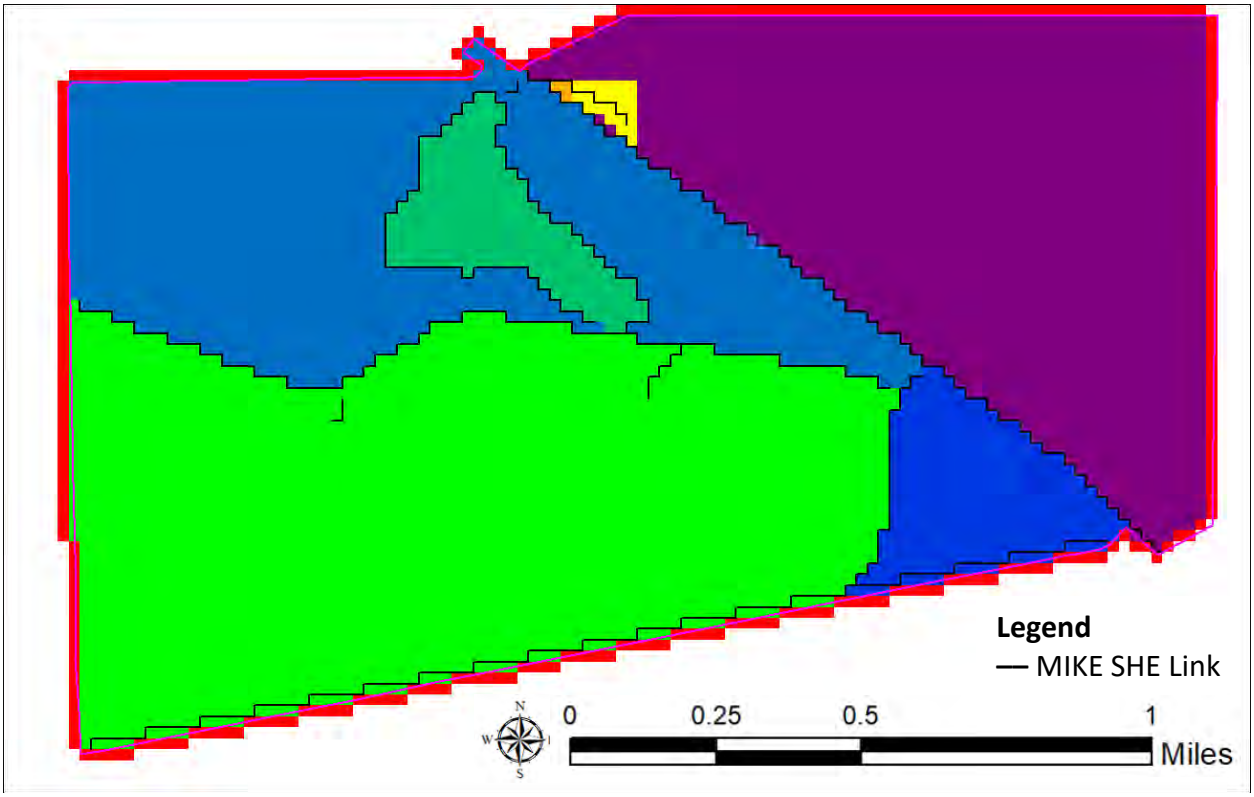

Figure 17. SOLFA map in the scenario model with proposed retention areas.

The following features were conceptualized in this scenario model with proposed retention areas.

1. Ponds north of US-41 Road. The two ponds were set as separated OL flow areas. A new branch labeled as "Ponds" goes through both ponds. The upstream end is connected to the US41 north ditch near Tomato Road and the downstream end to the treatment parcel branches south of US 41. Bottom elevations of the cross-sections are in the range -2' to -1' NAVD88. Cross section widths are set to match the pond areas estimated in GIS.
2. Weir between ponds. A weir (crest elevation = 0' NAVD88 and length= 34') is defined to control flow between ponds.
3. Pump from the collection pond into the treatment parcel. The downstream end of the branch "Ponds" has a discharge-type control structure to pump water from the second pond inside the treatment parcel. The discharge rate is a ramp from 0 cfs at a pond stage of 1.5' NAVD88 to 8 cfs (approx. 3,590 GPM) at stage of 1.7' NAVD88 or higher. The pumping stops if the stage at the treatment parcel is greater than 5' NAVD88.
4. Blocking of the US-41 north ditch. A block is placed at the north ditch by using a weir (crest elevation = 2' NAVD88 and length= 33') to facilitate water to enter the ponds.
5. Modification of the US-41 north ditch parallel to the ponds. In the segment of the US-41 north ditch parallel to the ponds, flood codes were removed and cross section widths were reduced accordingly. Also, the bank elevation in the north side of the cross sections was raised to 5' NAVD88 to prevent inflows from the ponds.
6. Modification of the treatment parcel branches. The external bank elevation of the treatment parcel branch cross sections was raised to 6' NAVD88 to prevent lateral inflows.
7. Weir to control discharges from the treatment parcel area. Two weirs (crest elevation = 2' NAVD88 and total length= 30') were inserted to control discharges from the treatment parcel area.

Monthly averaged flows at selected locations as estimated from this scenario model with proposed retention areas for the period 2005-2013 are presented in **Figure 18** through **Figure 20**. Notice that the outflow estimated from the treatment parcel branch is about half of the inflow due mainly to seepage losses.

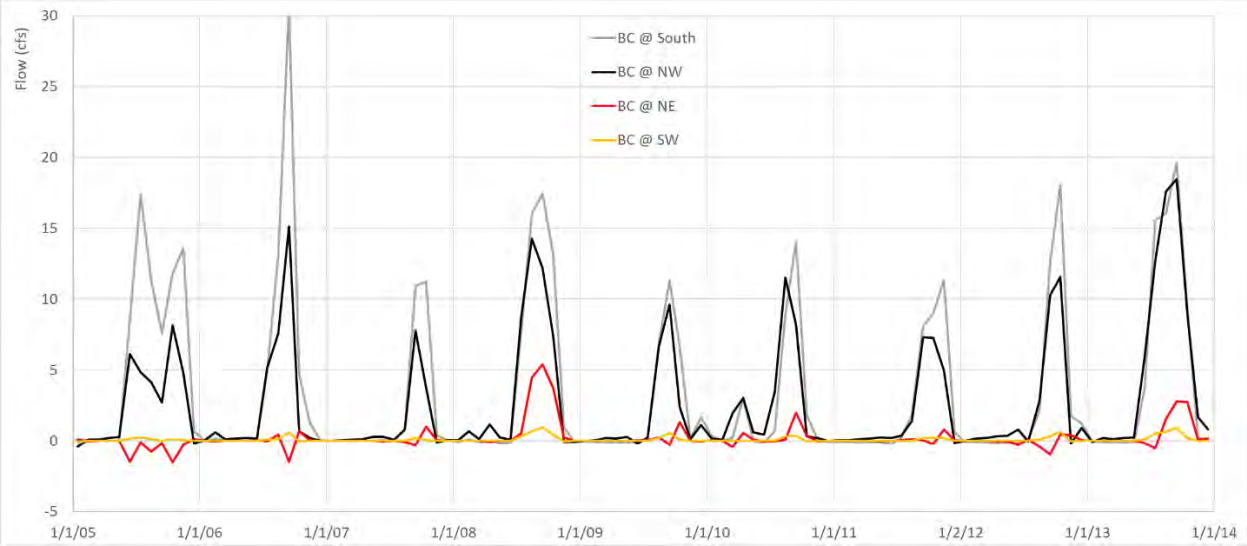

Figure 18. Model monthly-averaged flows at the boundaries estimated from scenario with proposed retention areas.

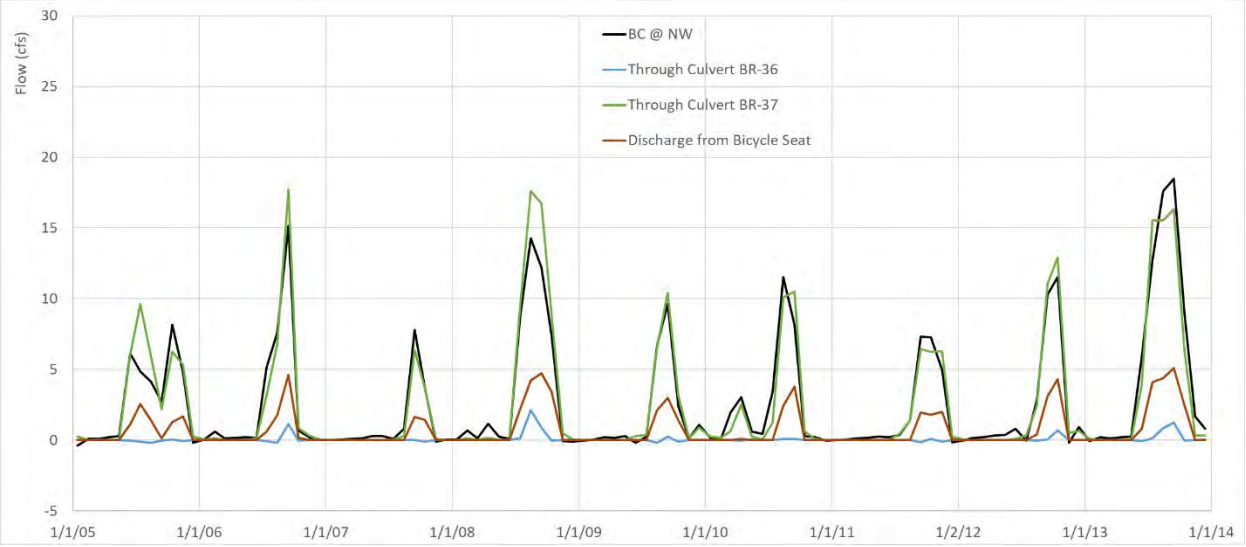

Figure 19. Model monthly-averaged flows at the NW boundary and through the US-41 Road Culverts estimated from scenario with proposed retention areas.

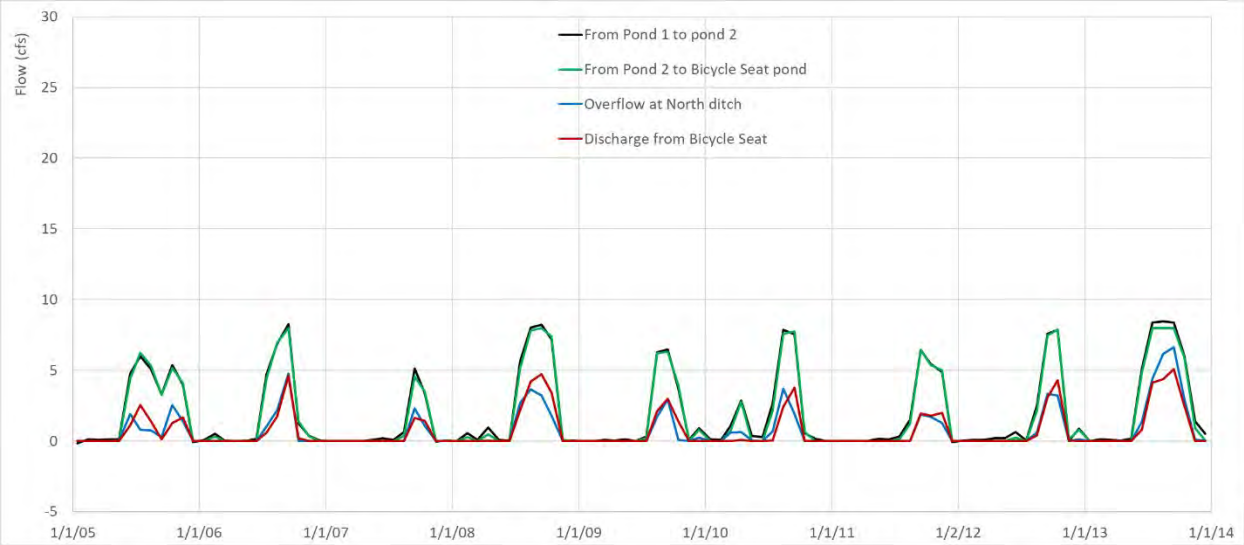

Figure 20. Model monthly-averaged flows through retention areas estimated from scenario with proposed retention areas.

Scenario without Proposed Retention Areas

This scenario considers that there are no retention areas north of US-41 Road, and that the pumping is conducted directly from the US-41 north ditch. Thus, from the list of model changes with respect to the existing conditions that were listed on page 14, only items 3, 6 and 7 were applied in this scenario. In other words, this scenario considers similar pump and receiving treatment parcel area as in previous scenario.

Monthly averaged flows at selected locations as estimated from this scenario model with direct pumping from the ditch for the period 2005-2013 are presented in **Figure 21** through **Figure 22**.

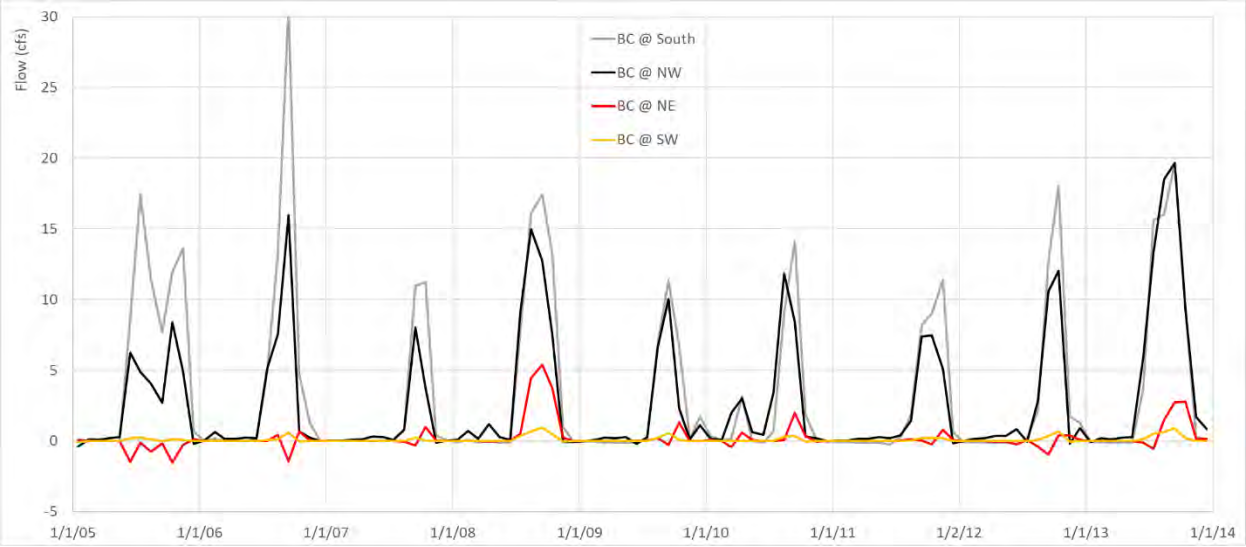

Figure 21. Model monthly-averaged flows at the boundaries estimated from scenario with direct pumping from the ditch.

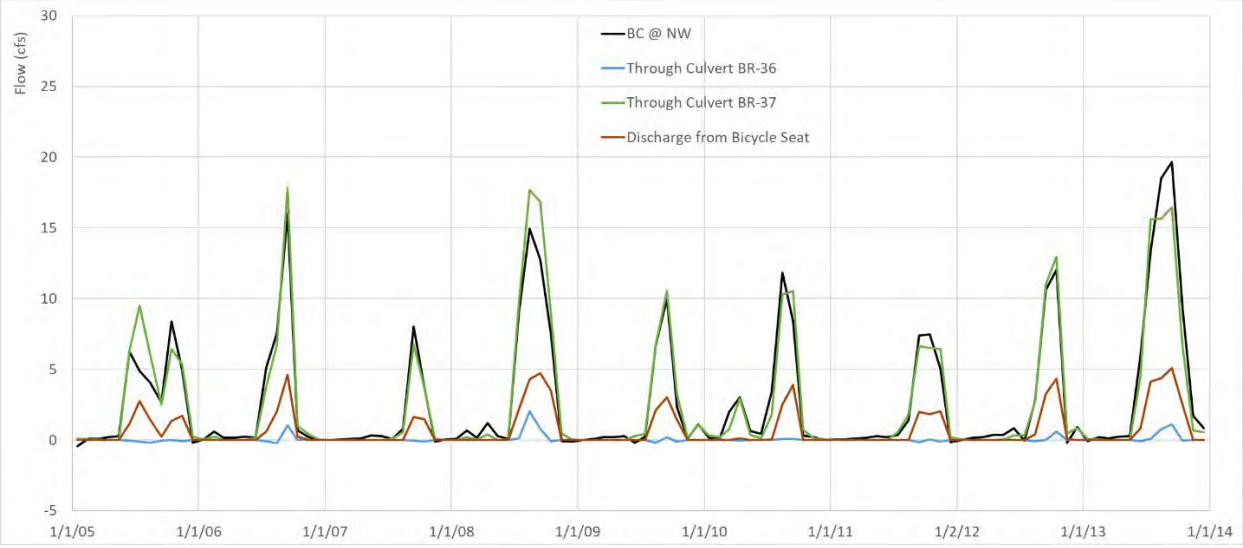

Figure 22. Model monthly-averaged flows at the NW boundary and through the US-41 Road Culverts estimated from scenario with direct pumping from the ditch.

In this scenario, it is possible that the pump may turn on and off more frequently than in previous scenario since there is less storage upstream of the pump. However, **Table 2** suggests that there is no significant changes in the estimated average flow, and therefore, in the total pumped volume. It should be mentioned that the average flows presented in Table 2 are computed from instant model results output every hour, which may contribute to the slight differences observed in the average magnitudes.

Table 2. Averaged flows estimated at proposed pump.

	average pump flow (cfs) period 2005-2013	
	entire year	during August
Scenario with proposed retention areas	1.8	5.1
Scenario with pumping from the ditch	1.8	5.3

Scenario with PSRP

The relatively small model domain in this study is downstream of the PSRP areas, and therefore, the scenario with the PSRP is based on the flows through the US-41 culverts in the model area (i.e., BR36+BR37*) as predicted by the SFWMD[2].

The scatter plot in **Figure 23** compares monthly flows through BR36+BR37* for the cases of with and without PSRP. They correlate very well, and second-grade polynomial was fitted. In general, the PSRP causes a flow increment through those culverts, as can be inferred from the time series of the flow differences presented in **Figure 24**.

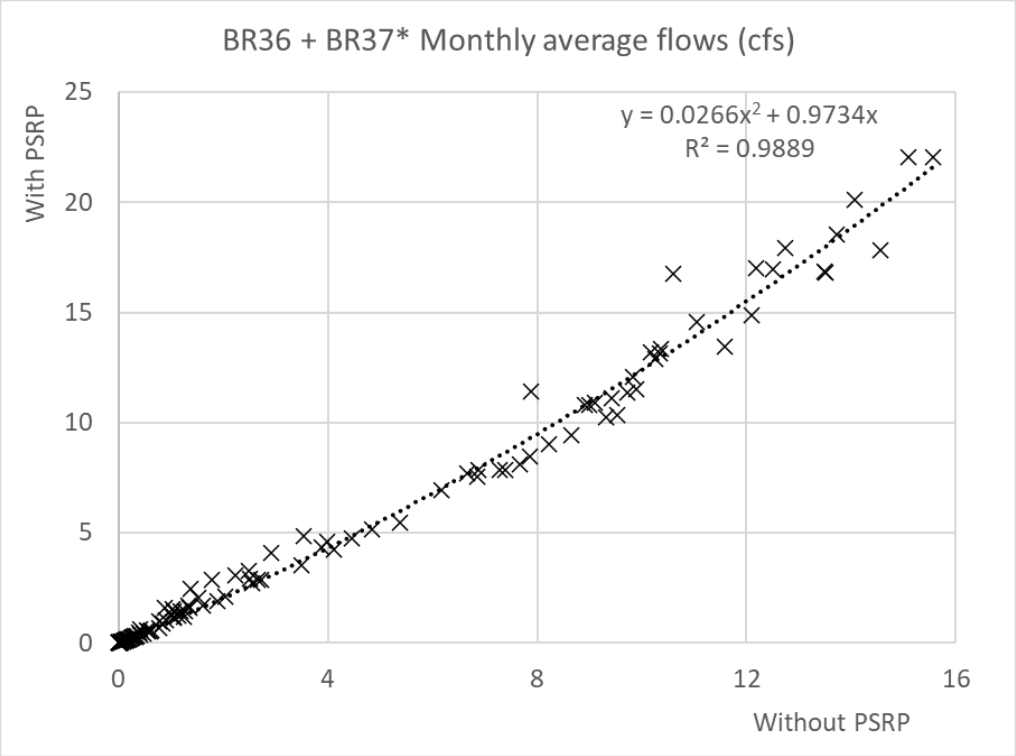

Figure 23. Scatter plot of monthly average flows through BR36+BR37 as reported by the SFWMD[2] for the 10-year period from November 2003 to October 2013.*

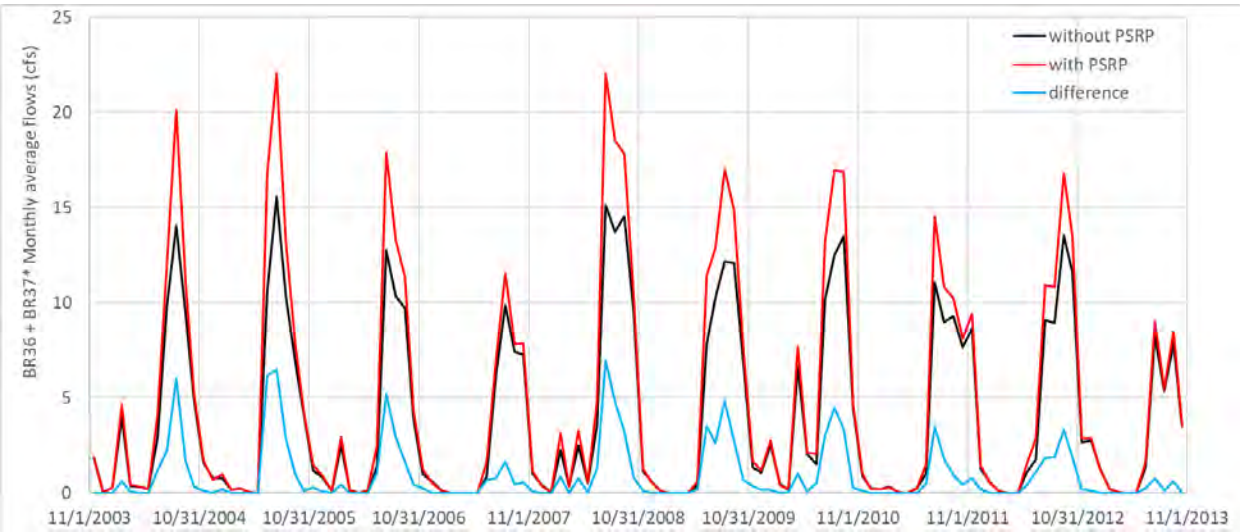

Figure 24. Monthly average flows through BR36+BR37 as reported by the SFWMD[2] for the 10-year period from November 2003 to October 2013. The flow difference (post – pre PSRP) is also included.*

This scenario with PSRP starts from the existing condition model. The daily flows predicted by our existing condition model through the US-41 culverts (i.e., BR36+BR37) are used to estimate daily flows in post-PSRP conditions by using the second-grade polynomial fitted in Figure 23. Thus, the flow difference (post-PSRP minus existing conditions) was calculated to obtain a daily time series of the flow excess due to the implementation of the PSRP.

Reference: Picayune Watershed Water Quality Project – Preliminary Performance Modeling

Stantec conducted preliminary water quality performance modeling to assess the potential performance expectations of the treatment sequences on each alternative parcel and assist in the ranking of parcels for the improvement in water quality through the removal of nitrogen and phosphorus from the Tamiami Canal. Please note, the modeling performed was not a design level analysis, but rather was strictly focused towards comparing water quality performance between the candidate parcels for the purposes of site selection and parcel ranking.

Additional hydraulic and performance modeling should be conducted upon final selection of the candidate parcel and design details are further developed. Recommended pre-design activities include but are not limited to water balance modeling, treatment sequence and flow path (e.g., parallel vs series), and site-specific conditions (e.g., soil characteristics, depth to water, infiltration/seepage rates, detailed topography, etc.).

Preliminary estimates for performance of the treatment wetlands per each parcel schematic were calculated utilizing the modified first-order P-k-C* model which takes into consideration hydraulic loading rate (HLR), non-ideal flow, background concentration, and pollutant weathering (Kadlec and Wallace, 2009).

See equation below

$$\left(\frac{Co - C^*}{Ci - C^*}\right) = \frac{1}{(1 + k/Pq)^P}$$

Where:
C_0 = outlet concentrations, mg/L
C_i = inlet concentration, mg/L
C* = background concentration, mg/L
k = modified first-order areal rate coefficient, m/d
P = apparent number of tanks-in-series (TIS), dimensionless
q = hydraulic loading rate, m/d

Initial water quality modeling was based upon published design parameters (Kadlec and Wallace, 2009) and operational data from similar operating free water / surface flow wetland systems, many of which are located in Florida (Kadlec, 2016; Bays and Bishop, 2014).

Assumed water quality modeling parameters are summarized in the following Table 1.

Table 1. Water quality modeling parameters for free water / surface flow wetlands.

	Tanks-in-Series P	Areal Rate Coefficient k (m/yr)	Background Concentration C* (mg/L)
Nitrogen	3	12.6[(1)(2)]	0.50
Phosphorus	5	12.5[(3)]	0.002

(1) Kadlec and Wallace, 2009
(2) Bays and Bishop, 2014
(3) Kadlec, 2016

Daily water quality leaving the treatment wetlands on each parcel was determined based upon the total area of wetlands, hydraulic loading, and assumed water quality entering the parcel.

Assumed daily flow was developed based upon preliminary hydraulic modeling of the Tamiami Canal conducted by Lago Consulting from 2005 through 2013 under both existing and future conditions post PSRP conducted by Lago Consulting utilizing MIKE SHE (Appendix M: Lago Technical Memorandum dated May 29, 2022). An initial peak pumping rate of 8-cfs (average 1.85-cfs) was selected to be consistent with the preliminary sizing and sequences identified in the WQFS.

Assumed influent water quality to each treatment sequence was based upon the monthly water quality projections for nitrogen and phosphorus from 2004 through 2013 predicted within the Tamiami Canal as documented in the PSRP Water Quality Projections with Southwestern Protective Levee Feature Report (excel file PSRPLoadCalculations_with_NRQ) which were based upon the South Florida Water Management District's DBHYDRO database (SFWMD, 2020).

Daily nitrogen and phosphorus concentrations were estimated via interpolation between each monthly value. The following Table 2 provides a summary of mean influent concentrations as well as mean nutrient loading per parcel treatment area.

Table 2. Mean Influent Water Quality Concentrations and Loading by Parcel

	Mean Influent Concentration	8	13	803	1207	1920	1920+
	mg/L	g/m2/d					
Nitrogen	1.44	0.048	0.102	0.051	0.053	0.053	0.026
Phosphorus	0.267	0.009	0.019	0.009	0.010	0.010	0.005

Additional performance modeling should consider supplemental water quality sampling of the Tamiami Canal during both dry and wet weather flow to determine both peak flow capture by a pump station and anticipated nutrient mass loading into the final treatment sequence and chosen candidate parcel.
