Overview

- Operations and performance dominated by hurricane flows and loads
- STA-3/4 (October 2003 – September 2004)
Inflow: 445,630 AF; 48,566; 88 ppb
Outflow: 432,649 AF; 6,579 kg; 12 ppb
Removal: 42 tons; 86%
- STA-6 fire at inflow pump station destroyed 2 pumps

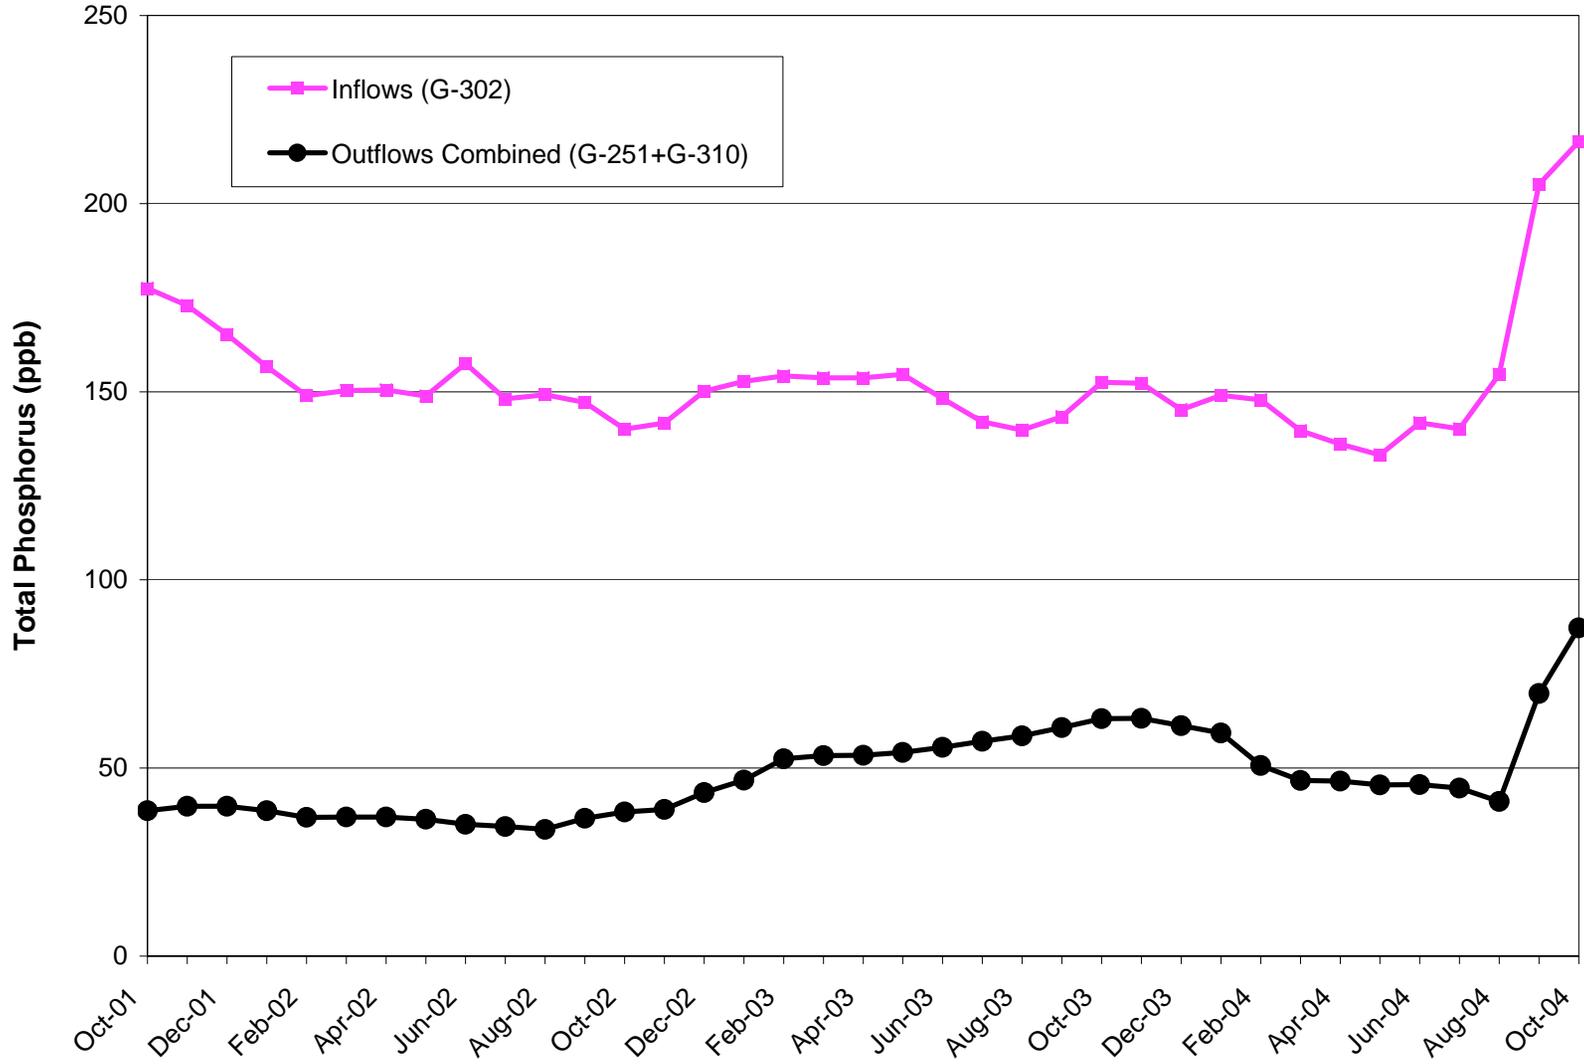

September 2004

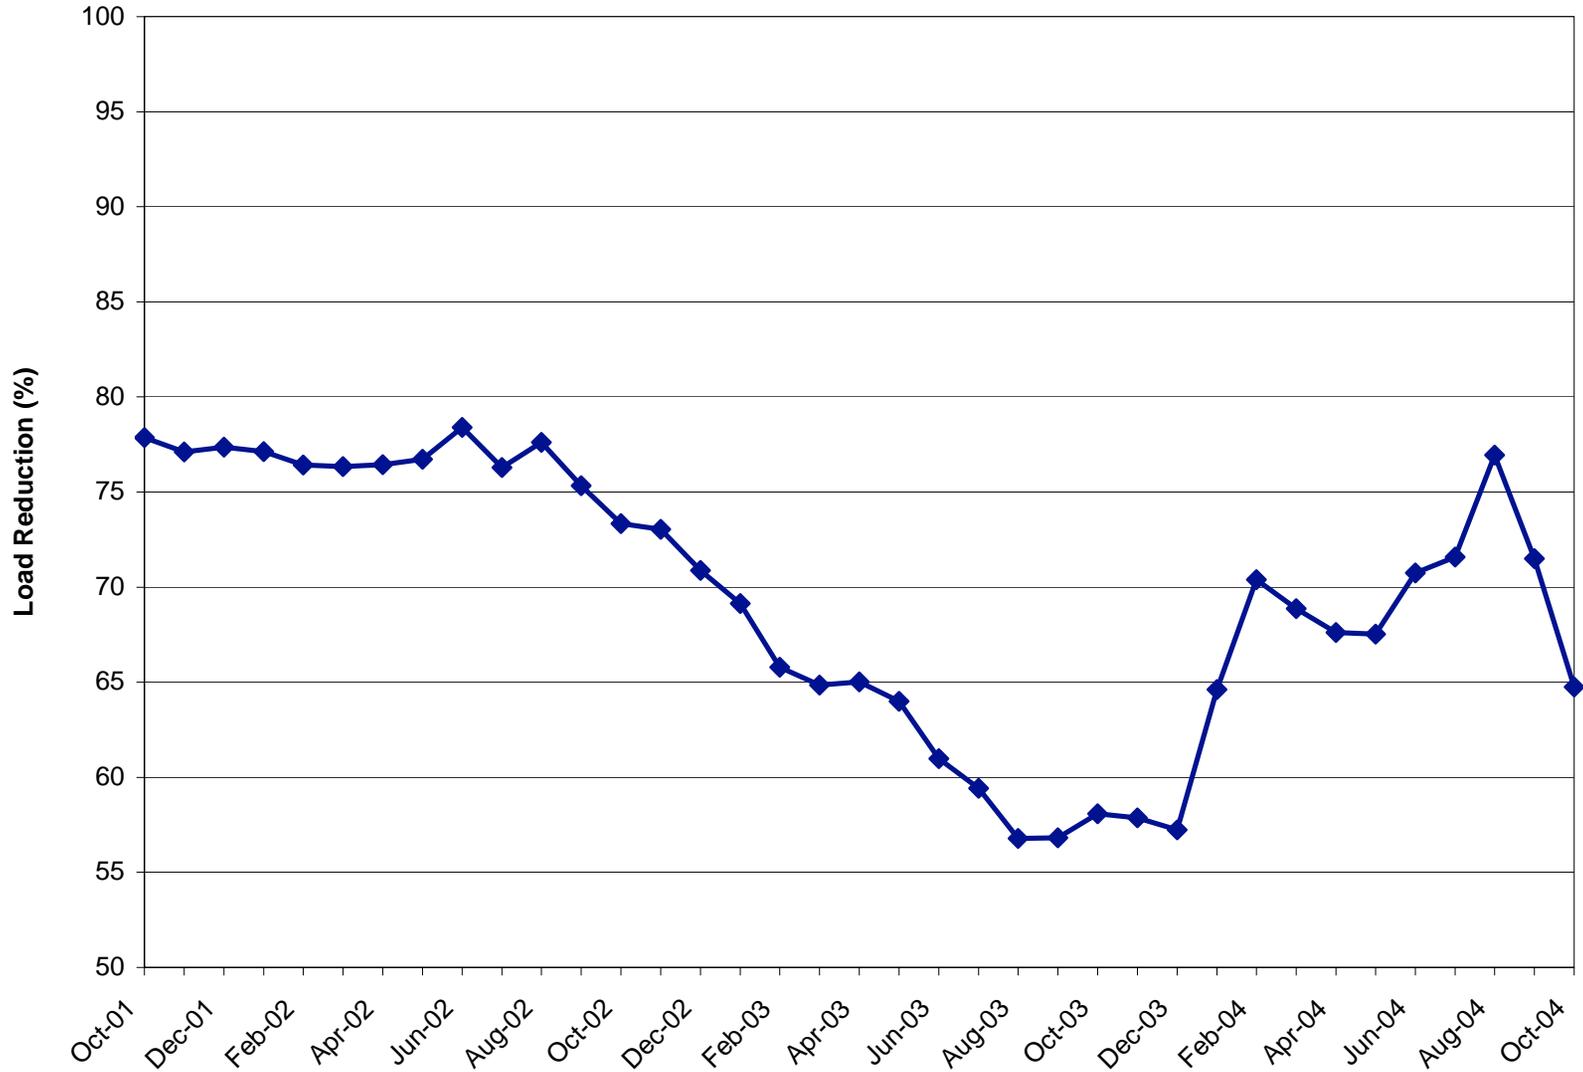

- Glancing blows from Hurricanes Frances, Ivan and Jeanne
- In general, STAs performed well
 - Inflow: 414,000 acre feet & 96 tons of phosphorus
 - 30% of annual flows; 60% of annual loads
 - 65 m tons removed (70%)
 - Average outflow = 53 ppb
 - STA-1E was utilized
- STA-1W was severely impacted by storms
 - Inflow: 109,900 AF (70% of annual flows)
 - 40 tons (150% of annual loads); 296 ppb
 - Outflow: 19 tons; average TP = 123 ppb
 - 21 m tons removed
