A Brief Introduction to the Lake Belt

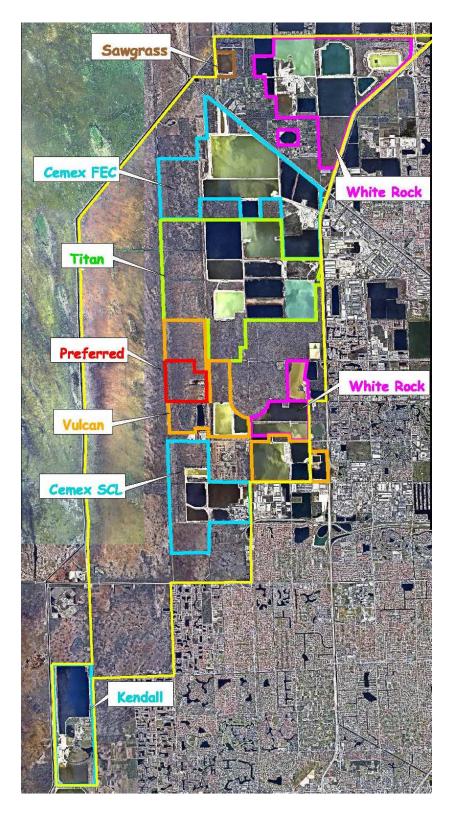

Lake Belt Limestone is a state-wide resource

"...Florida's highest quality limestone, the rock that makes the best roads and the best concrete for high rise buildings only comes from the Lake Belt Region."

FDOT Strategic Resources Study, 2009

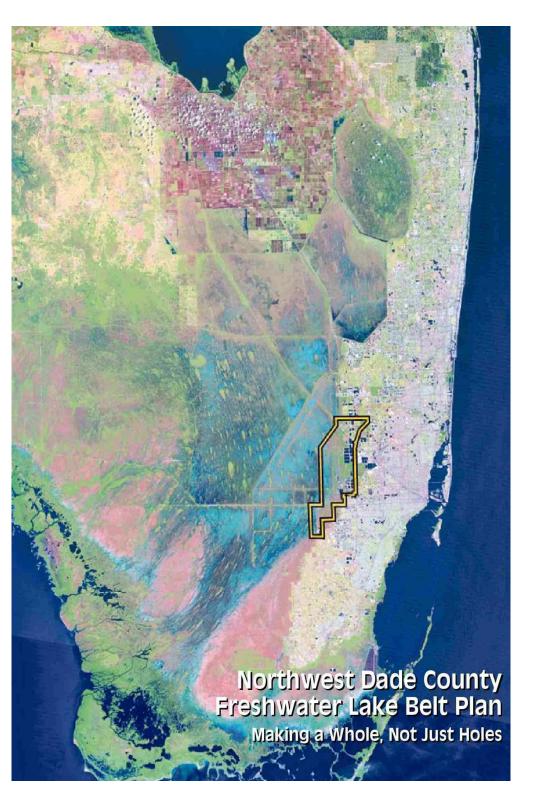

Florida has 6 very large mines that are ranked in the top 20 in the country. Five are in the Lake Belt.

- Cemex FEC (#1)
- White Rock North (#2)
- Titan (#4)
- Cemex Krome (#14)
- Florida Rock

The Top Mines must include:

- Large Capacity
- High Capital Investment
- Energy Efficiency

FDOT Strategic Resources Study, 2009

The Lake Belt Timeline

1992	Official Planning begun
1999	Lake Belt Plan approved
2000	Corps EIS on LB Plan
2002	Federal permits issued
2006	Federal permits vacated
2009	New EIS completed
2010	New LB permits issued Phase 1 Mining Approved Phase 2 Mining Conditioned
2020	Approval of Phase 2 permits

Lake Belt Plan

- Legislature-established study
- Multi-year process in 1990's developed by a committee of agency, community, industry, and environmental leaders
- SFWMD lead agency
- Long term plan as opposed to piecemeal permit-by-permit approach
- Final Plan adopted by Legislature as part of the Lake Belt statute

Plan Highlights

- State Fee on sales of limestone products from the Lake Belt
- Acquire and restore 12,000+ acres of wetlands in Pennsuco
- Protect Miami-Dade's water supply
- Mined lands become CERP reservoirs, wellfield protection zones, or recreational areas
- Predictable future for mining companies
- Multi-Agency Implementation Committee

Initial "Lake Belt Plan" consistent permits were issued by the DEP & Corps in 2002.

Additional DEP/Corps permits in 2010 & 2020

Rockmining Supported

Owned or controlled by miners,
consistent with appropriate buffers

Rockmining Supported

Consistent with appropriate buffers.

Not owned and/or not usable by miners

Rockmining Allowable

To extent consistent with Everglades restoration recommendations of the July 1, 1999 Comprehensive Plan of the C&SF Restudy to Congress. Owned or controlled by miners.

Rockmining Allowable

To extent consistent with Everglades restoration recommendations of the July 1, 1999 Comprehensive Plan of the C&SF Restudy to Congress. Not owned and/or not usable by miners.

Potential Mitigation
Development would result in
significant environmental impacts/

suitable for mitigation.

— Potential Mitigation

Development would result in significant environmental impacts/ suitable for mitigation. Owned by rock industry - Potential swaps for lands

Excluded Area

No mining due to prisons, cemeteries, FP&L substation

Existing Lakes

Northwest Dade County Freshwater Lake Belt Plan

Mitigation Fee

•\$141 million collected through 2023

- \$0.05 per ton fee started in 2000. 2002 Permit tables estimated fee collections of \$96 million through 2023.
- Fee has increased /decreased over time based on project costs, while ensuring that mitigation is fully funded.
- Legislature adopted a new fee schedule in 2015 that gradually reduced the fee per ton. Fee is now back at original \$0.05 per ton.

Lake Belt Mitigation Plan (373.41492 F.S.)

- (6)(a) The proceeds of the mitigation fee must be used to conduct mitigation activities that are appropriate to offset the loss of the value and functions of wetlands as a result of mining activities and to conduct water quality monitoring to ensure the protection of water resources within the Lake Belt Area. Such mitigation may include the purchase, enhancement, restoration, and management of wetlands and uplands in the Everglades watershed, the purchase of mitigation credit from a permitted mitigation bank, and any structural modifications to the existing drainage system to enhance the hydrology of the Miami-Dade County Lake Belt Area or the Everglades watershed.
- (6)(b) Expenditures of the mitigation fee must be approved by an interagency committee.
- (8)(a) The interagency committee established in this section shall annually prepare and submit to the governing board of the South Florida Water Management District a report evaluating the mitigation costs and revenues generated by the mitigation fee.

Pennsuco Wetlands Restoration

Acquisition/Restoration:

3100 acres

Restoration only:

4925 acres

Total Restored: 8,025 acres

Includes funding for long-term management by SFWMD

Funding: \$40 million

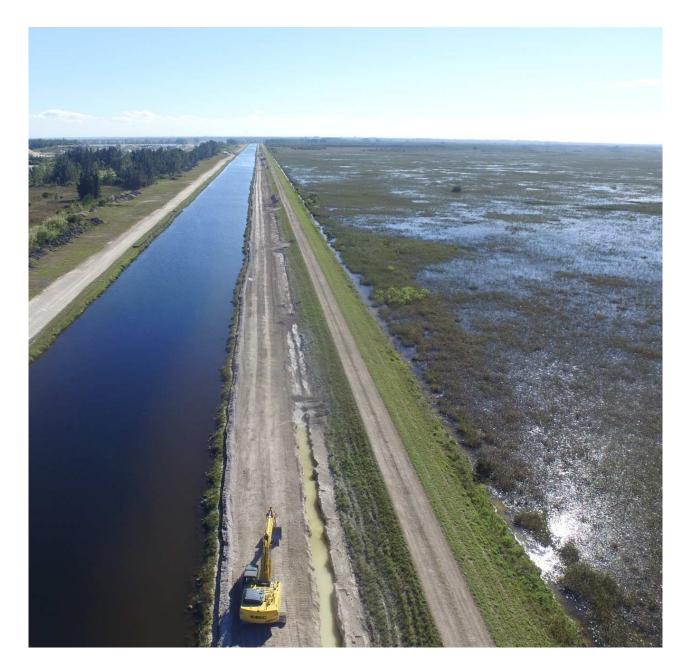

Everglades National Park Enhancement

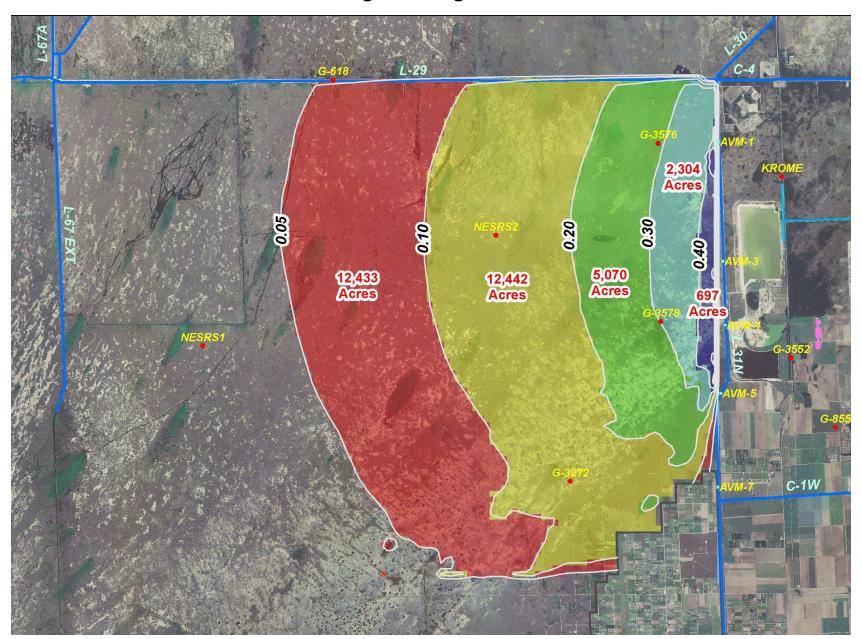

5-mile long - 35' deep seepage barrier to enhance hydrology in the National Park

Benefits 20,000+ acres in ENP

Funding: \$18.5 million

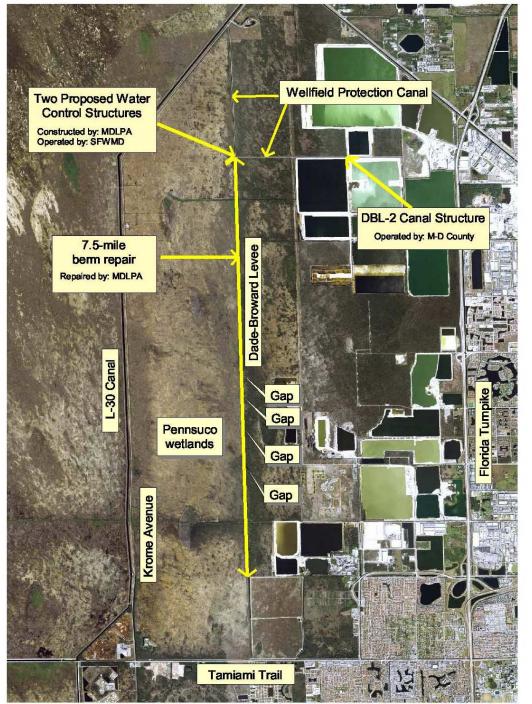

Simulated Effect of a 5-mile Seepage Barrier on the Average Wet Season Stage in Everglades National Park

Dade-Broward Levee Project

7.5-mile berm repair and construction of two new water control structures to enhance hydrology in the Pennsuco wetlands

Funding: \$8.9 million

Dade-Broward Levee Improvement Project

Field investigation showed multiple breaches in the Dade-Broward Levee

Wellfield Protection Canal structure

Pennsuco Wetlands
Diversion structure

Abiaki Prairie restoration project

Acquisition/Restoration:
2600 acres
(to date)

Completed Project: 6300 acres

Funding: \$62 million

Abiaki Prairie Restoration Project

- Restores historic Everglades conditions to 6,300 acres of former citrus grove
- Improves water quality in the Everglades watershed
- Restores historic habitat
- Expands habitat area for listed plant and animal species
- Promotes the restoration of a selfsustaining ecosystem
- Provides sufficient credits for full Lake Belt Plan mine-out
