Blue shaded and **bolded** dates are the compliance sampling events and corresponding flow-weighted mean concentrations (FWMC).

Light green shaded cell indicates there was flow at the site on the sampling day.

Notes:

1. Total of flow at S332D + S18C.
2. G qualified. Analyte was detected at or above the method detection limit in both the sample and the associated field blank, equipment blank, or trip blank, and the blank value was greater than 10% of the associated sample value.
3. All sampling events and flow data are used to calculate flow-weighted mean concentrations.

Blue shaded and **bolded** dates are the compliance sampling events and corresponding flow-weighted mean concentrations (FWMC).

Light green shaded cell indicates there was flow at the site on the sampling day.

"-" in flow data indicates the value was negative and zeroed out.

Notes:

- Total of flow at S332D + G737 + S18C.
- Up to September 30, 2018, S200 daily mean flow on days when G737 gates were open was used for G737 flow to estimate sampling event TP FWMC. From October 1, 2018, G737 flow was directly measured at G737.
- G: Analyte was detected at or above the method detection limit in both the sample and the associated field blank, equipment blank, or trip blank, and the blank value was greater than 10% of the associated sample value.
- All sampling events and flow data are used to calculate flow-weighted mean concentrations.

Blue shaded and **bolded** dates are the compliance sampling events and corresponding flow-weighted mean concentrations (FWMC).

Light green shaded cell indicates there was flow at the site on the sampling day.

"-" in flow data indicates the value was negative and zeroed out. "M" indicates the daily mean flow datum was not available.

Notes:

1. Total of flow at S332D + G737 + S18C.

2. Up to September 30, 2018, S200 daily mean flow on days when G737 gates were open was used for G737 flow to estimate sampling event TP FWMC. From October 1, 2018, G737 flow was directly measured at G737.

3. G: Analyte was detected at or above the method detection limit in both the sample and the associated field blank, equipment blank, or trip blank, and the blank value was greater than 10% of the associated sample value.

J: The sample was collected from a disconnected pool and was not representative of the surrounding water body. The surrounding area was dry.

Y: Analysis performed on un/improperly preserved sample.

4. All sampling events and flow data are used to calculate flow-weighted mean concentrations.
