Welcome to:
TAYLOR CREEK STORMWATER TREATMENT AREA

Introduction:
The primary purpose of the stormwater reclamation area is to remove phosphorus from stormwater and nutrient runoff as the water flows through the wetland areas. The area will help improve water quality through a natural biological assimilation process.

Taylor Creek Stormwater Treatment Area includes 70 acres of wetlands, one of the largest in Broward County. The area is designed to treat approximately 3.3 million gallons of water per year. The treated water is then recycled into the stormwater management area, providing opportunities for the public to enjoy the site.

What's out there?
- Scenic views of the lake and wetland
- Wildlife such as birds, fish, and other animals
- A 1.5-mile hiking/biking trail

What can you see?
- The wetland area
- The lake
- The surrounding landscape

Partnerships:
The project is a joint effort involving the US Army Corps of Engineers, the South Florida Water Management District, and the State of Florida.

For more information, contact Okeechobee County Parks and Recreation at 305-494-8000 or Florida Stormwater Management District, Okeechobee Service Center at 305-494-8000.

Permitted Uses:
- Hiking/Bicycling Trail
- Picnicking
- Environmental education

Note: All activities are non-motorized, and there are no services or facilities available. Please respect the wildlife and the environment.
