

Dispersed Water Management Potential Site – Okeechobee East / West Stormwater Conveyance Project

Location:	Okeechobee County
Subwatershed:	Taylor Creek/Nubbin Slough
Basin:	-
Purpose:	Acquire 1,000 acres of land to implement a stormwater conveyance system with retention and treatment components from east to west through the City of Okeechobee and Okeechobee County. Following water quality treatment and storage, the water will be conveyed into SFWMD Lemkin Creek urban water storage and treatment facility before making its way into the Rim Canal and ultimately Lake Okeechobee.
Project Operation Start:	TBD
Considerations/Update:	There are no updates at this time. More detailed planning and design will define the facility that is needed to meet phosphorus reductions as well as storage needs for this subwatershed.
