

SFWMD Water Conservation Expo
February 20, 2015

Michael W. Hewett
Director of Environmental & Sustainability Programs
Publix Super Markets, Inc.

11 million miles and 1.7 million gallons

of diesel fuel saved since 2007 by making improvements to how we send product to our stores, adjusting everything from how trailers are loaded to which routes drivers take.

8% of suppliers' products backhauled

rather than having our trailers return empty to the warehouse after their store deliveries—nine times as many as in 2007.

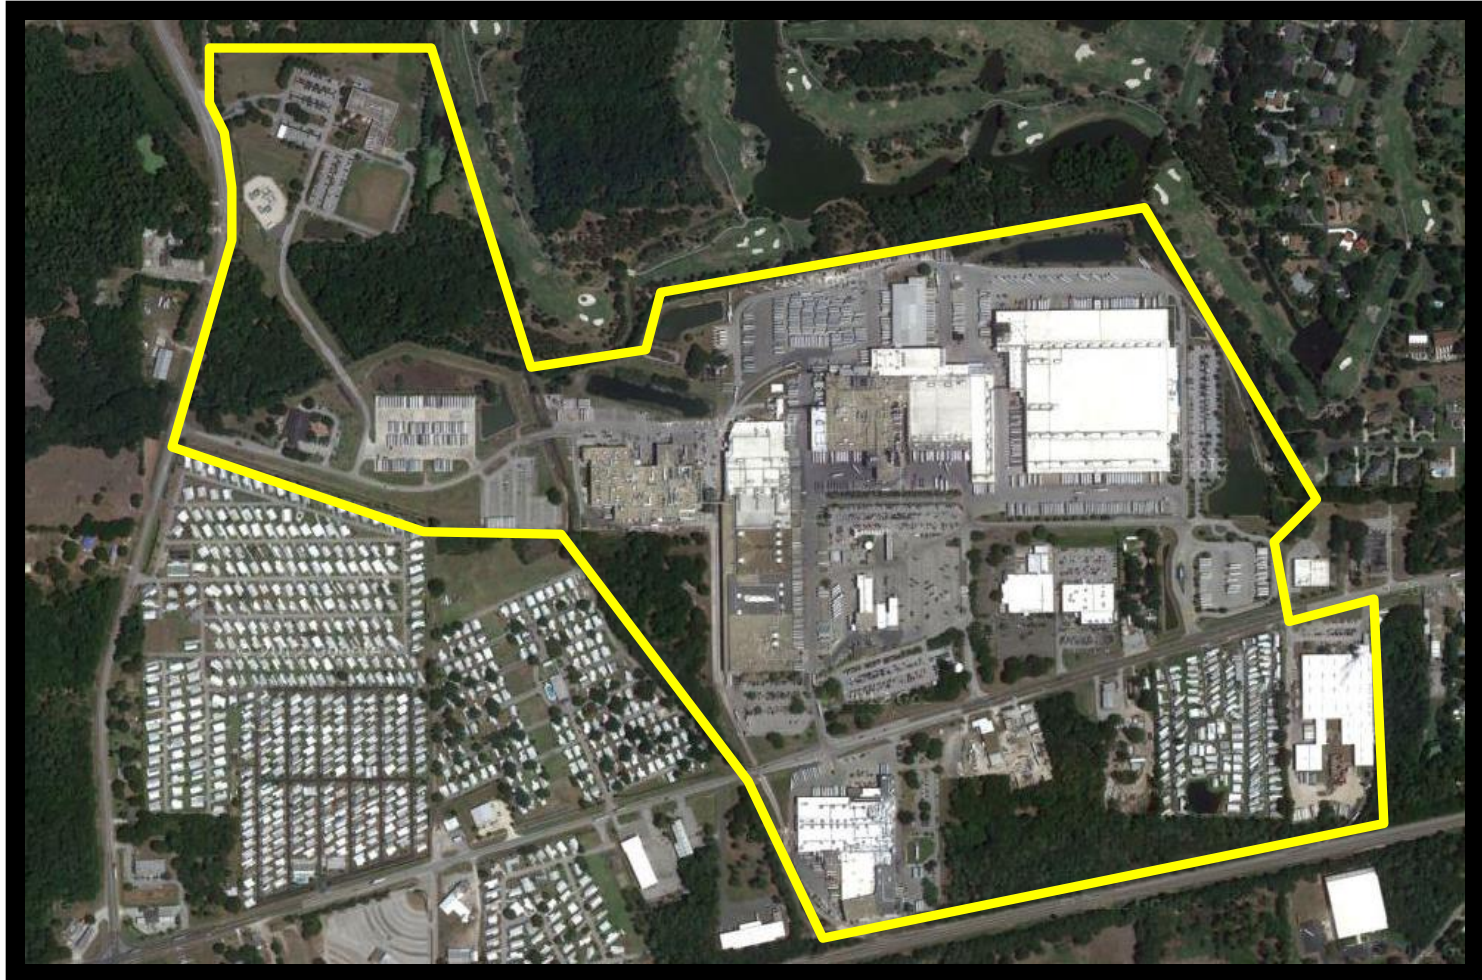

300,000 gallons of diesel fuel

anticipated to be saved annually thanks to an adjustment made to the differential gears of our tractors.

35,000 miles per oil change

—up from 25,000— thanks to the new engines in our tractors, saving labor hours and the need for new product, plus reducing the amount of waste oil we recycle.
