

**River of Grass Phase II  
Science Workshop  
January 27 – 28, 2010**

**Kenneth G. Ammon, P.E., Deputy Executive Director,  
Everglades Restoration and Capital Projects**

# Science Workshop #1

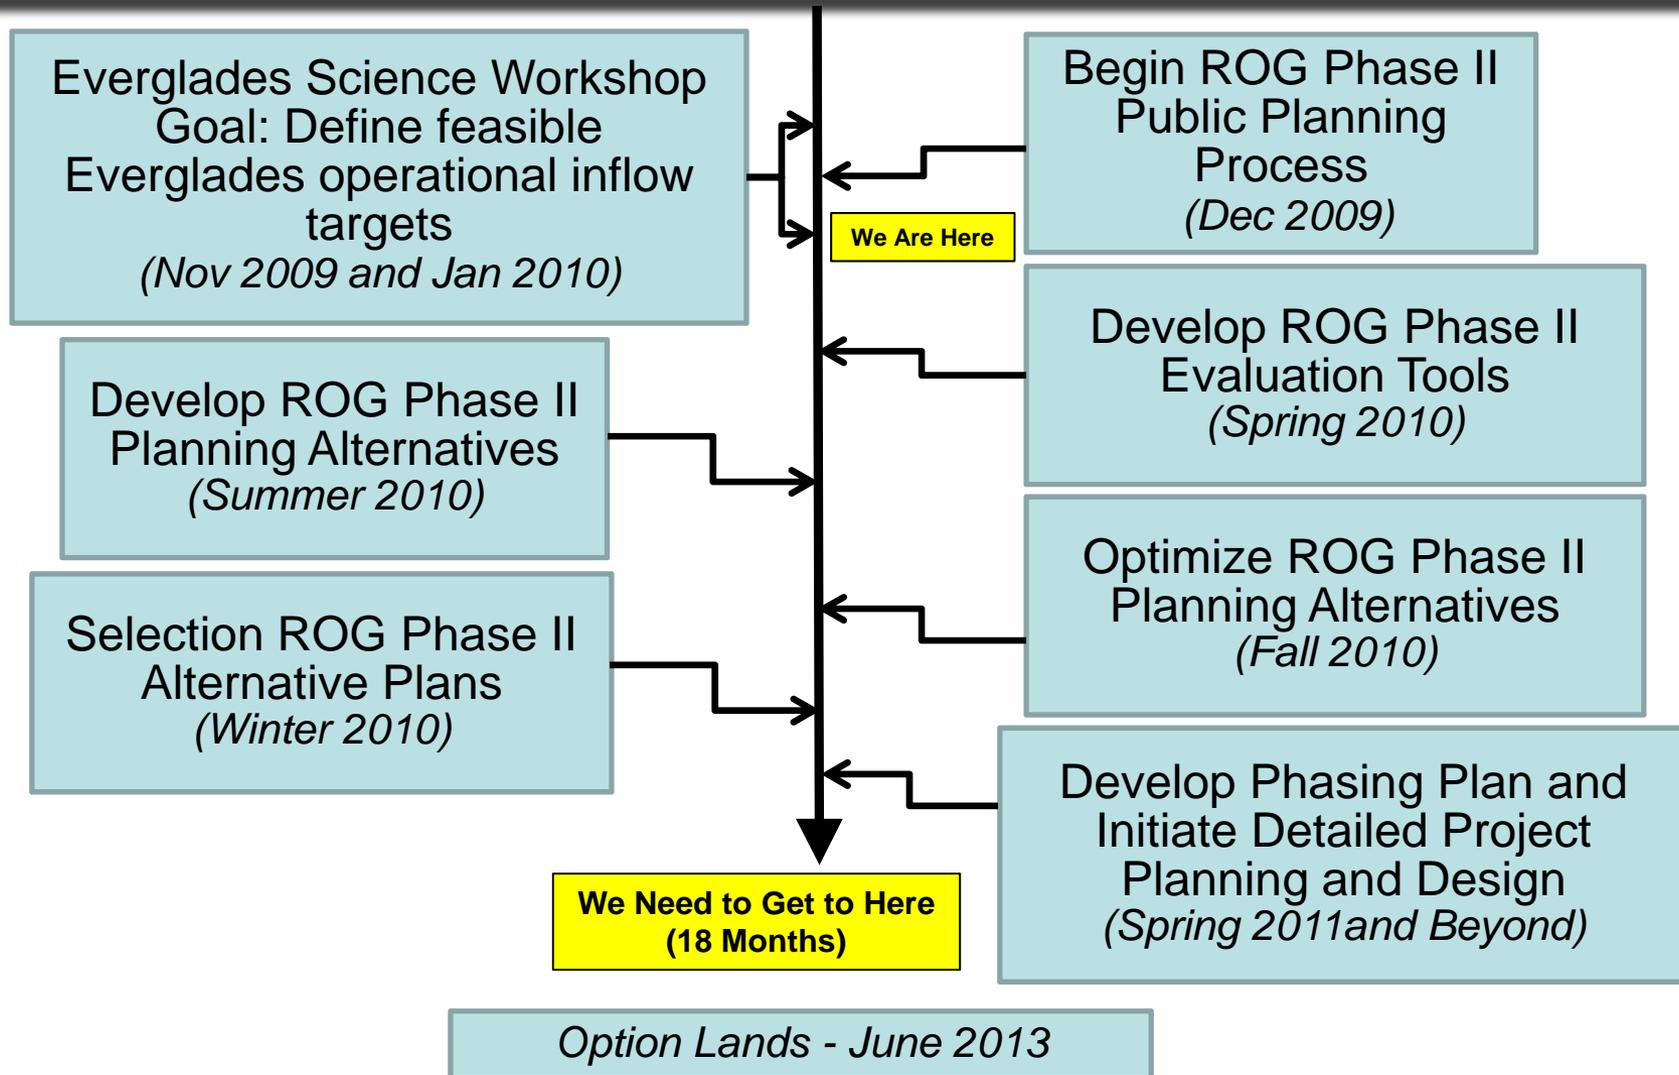

- November 17 and 18
  - Presented and discussed system constraints and relationship between system constraints and hydrologic characteristics
  - Presented and discussed a range of feasible Everglades flow scenarios for potential use in ROG Phase II planning
  - Presented and discussed a means by which key characteristics of Everglades hydrology should be measured

## Science Workshop #2 Goal

January 27- 28, 2010

- Present new information/results related to the modeling tool & evaluation methodology based on public input from previous science workshop
- Determine if there is consensus regarding hydrologic characteristics & system constraints, or range of hydrologic characteristics & system constraints to be used in Phase II planning
- SFWMD will finalize strategy for Phase II planning

# ROG Phase II Schedule - Overview
