

Chapter 7: Mitigation Donation Annual Report

Marjorie R. Moore and Ross Adair

INTRODUCTION

The information in this chapter of the *2014 South Florida Environmental Report (SFER) – Volume II* is specific to two mitigation projects: (1) Corkscrew Regional Ecosystem Watershed (CREW), located in Lee and Collier counties, and (2) Pennsuco Regional Mitigation Area, located in Miami-Dade County, for Fiscal Year 2013 (FY2013) (October 1, 2012–September 30, 2013). In accordance with Subsection 373.414(1)(b)(2), Florida Statutes (F.S.), this chapter provides a summary of these endorsed mitigation projects including the available mitigation fund balance, expenditures, and a description of the restoration and management activities during this time frame. The two mitigation sites no longer accept mitigation funds as a means of offsetting wetland impacts, but they continue as expenditure sites.

CORKSCREW REGIONAL ECOSYSTEM WATERSHED

The Corkscrew Regional Ecosystem Watershed is a vast project covering approximately 60,000 acres in Lee and Collier counties (**Figure 7-1**). The CREW lands contain some of the largest remaining pristine cypress wetlands in the United States, providing habitat to a number of rare, threatened, and endangered species. In June 1995, the South Florida Water Management District (SFWMD or District) began accepting cash payments for projects in CREW as a form of mitigation to offset impacts to wetlands. Mitigation monies have provided funding for land acquisition, chemical treatment of exotics, hydrologic enhancement, monitoring of restoration progress, security management, and prescribed burning.

ACQUISITION

Land acquisition in CREW provides improved wildlife habitat for threatened and endangered species, and protection of water resources that provide improved water quality and flood protection. The Summary of Wetlands Mitigation Balances by Project¹ (also referred to as the financial summary report), dated September 30, 2013, indicates a balance of \$23,459 available in the CREW land acquisition fund. During FY2013, no mitigation funds were utilized for CREW acquisition. SFWMD staff is currently evaluating opportunities to expend the remaining funds. **Table 7-1** summarizes the lands protected as mitigation in CREW.

Total	1285.58	1260.30****

*Excludes canal and road easements

**Tract No. 09001-090 was previously conveyed to the Trustees of the Internal Improvement Trust Fund of the State of Florida subject to a conservation easement and will not be included in the conservation easement to be conveyed to the Florida Department of Environmental Protection (FDEP) pursuant to this resolution.

***Tract No. 09005-035 was acquired with mitigation funds on June 26, 2009; however, because it was also acquired with U.S. Department of the Interior funds, a conservation easement will not be filed. The land will be protected by virtue of it showing as a mitigation acquisition in the database.

****Conservation easement conveyed to the FDEP on September 27, 2011, comprised approximately 1,244.29 acres, more or less [i.e., 1,260.20 acres less Tract Nos. 09001-90 (10.01 acres) and 09005-035 (6.0 acres)].

RESTORATION AND MANAGEMENT

During FY2013, the District provided contractual services for the initial and follow-up treatment of 2,537 acres of exotic and invasive species, including 701 acres of melaleuca (*Melaleuca quinquenervia*), 741 acres of Brazilian pepper (*Schinus terebinthifolius*), 625 acres of cogon grass (*Imperata cylindrica*), 177 acres of Old World climbing fern (*Lygodium microphyllum*), 60 acres of torpedo grass (*Panicum repens*), 60 acres of Wedelia (*Wedelia trilobata*), 95 acres of Christmas senna (*Senna pendula*), and 78 acres of exotic grasses and sedges. Although restoration and land management funds were not used directly to provide these treatments there were expenditures that totaled \$14,104, with \$4,220 for land management staff support, \$1,038 for chemicals to treat exotics and \$8,846 for equipment rental and repair in support of restoration activities such as repairing levee breaches, culvert repair, and prescribed burning. Restoration expenditures funded out of the acquisition interest sub-fund totaled \$37 and out of the land management interest \$14,067. For FY2014, \$15,000 is budgeted for equipment rental, \$5,000 for construction materials associated with maintenance activities, and \$1,040 for chemicals. The CREW restoration funding in FY2014 will total \$21,040.

The financial summary report indicates that as of September 30, 2013, there is no available balance in the restoration fund, the available interest on the land acquisition account is \$37 and there is a balance of \$79,535 in interest earned on the \$1,373,452 long-term management corpus amount available for use toward land management activities.

PENNSUCO REGIONAL MITIGATION AREA

The Pennsuco Regional Mitigation Area, also known as Pennsuco, is part of the Pennsuco Wetlands, or Cell 26 (**Figure 7-2**), of the East Coast Buffer in Miami-Dade County. Pennsuco Wetlands/Cell 26 covers an area of approximately 13,000 acres. Pennsuco is located between the Dade-Broward Levee, Krome Avenue (State Road 997), and Tamiami Trail (U.S. 41).

In 1995, the SFWMD began using Pennsuco as a regional off-site mitigation area, allowing permit applicants to make mitigation contributions for the acquisition, enhancement, and long-term management of Pennsuco lands as compensation for permitted wetland impacts. Although the developers' mitigation obligation was met in July 2002 and Pennsuco is no longer available as a mitigation option for developers with impacts to wetlands, Pennsuco acquisition, restoration, and long-term management continues as a mitigation option for Lake Belt miners under legislation adopted in Section 373.4149(1), F.S. The environmental benefit provides protection, enhancement, and management of the Pennsuco floral, faunal, and hydrologic resources. Pennsuco emphasizes the enhancement of a degraded ecosystem that would otherwise continue to decline and impact nearby natural areas without efforts to reduce the spread of exotics. The enhancement of Pennsuco has the potential to yield regional ecological benefits and contribute to the goals of Everglades restoration.

ACQUISITION

The financial summary report indicates that for the period ending September 30, 2013, there is no balance available in the Pennsuco land acquisition fund. During FY2013, no mitigation funds were utilized for Pennsuco acquisition. **Table 7-2** summarizes the lands protected as mitigation in Pennsuco.

RESTORATION

The restoration involves a multiyear herbicidal and manual exotic vegetation removal program. At the end of year five, the District expects the melaleuca to be at maintenance level with 1 percent or less total coverage. When the project is at a maintenance level and the restoration fund is fully expended, interest on the long-term management fund is expected to be used for management of the property. Land managers conduct semiannual aerial and on-ground monitoring to evaluate exotic treatments and provide timely, adaptive follow-up treatment.

The financial summary report indicates an available balance of \$4,380,434 as of September 30, 2013. The total restoration expenditure in FY2013 was \$835,927. Of this, the District spent \$760,000 for contractual services on the initial and follow-up treatment of 1,866 acres of exotics in Pennsuco and the adjacent Dade-Broward levee. In addition to exotic control costs, other restoration expenditures included \$39,893 for herbicide chemicals, \$31,372 for law enforcement patrol provided by the Florida Fish and Wildlife Conservation Commission (FWC), and \$4,662 for staff support. **Figure 7-3** summarizes the tracts where exotic treatments have been conducted to date as well as the plans for FY2014. **Figure 7-4** shows a visual depiction of the response of vegetation over time from these exotic treatments.

Table 7-2. Pennsuco acquisitions using developers' mitigation funding (fund 211) as of September 30, 2013.

Tract Number	Acreage Acquired	Mitigation Funded	% of Tract
300-932	482.5	\$868,500	100

* Lands acquired with 50 percent miners' mitigation funds and 50 percent developers' mitigation; acreage represented is amount acquired with developers' mitigation funds only.

** 56 parcels total, with federal share contributing 50 percent of the acquisition price for 40 of these parcels, which are indicated in bold italics. The balance of the tracts and other 50 percent of federally acquired tracts were acquired with P2000. Mitigation funds were used to swap out the P2000 acquired land with 50 percent coming from developers' (fund 211) and 50 percent from the Lake Belt miners. The 56 parcels included 300-914, 300-917, 300-920, 300-921, 300-925, 300-928, 300-929, 300-931, **300-959**, 300-961, 300-963, **300-987**, **300-988**, **300-989**, **300-990**, **300-991**, **300-992**, **300-993**, **300-994**, **300-995**, **300-996**, 301-900, **301-903**, **301-904**, **301-906**, **301-907**, 301-908, 301-910, **301-913**, **301-914**, **301-915**, **304-932**, **304-971**, **305-903**, **305-921**, **305-928**, **306-929**, **306-935**, **306-943**, **306-948**, **306-966**, **306-976**, **306-977**, **307-923**, **307-924**, **307-925**, **307-926**, **307-928**, **307-929**, **307-930**, **307-934**, **307-936**, **307-938**, 304-966, 304-968, and 304-974.

*** Parcels acquired in L-31 North Project using Pennsuco restoration funds.

Figure 7-2. Location of the Pennsuco Regional Mitigation Area.

Figure 7-3. Pennsuco exotic treatment areas.

Maintenance Control of Melaleuca in the Pennsuco Wetland Mitigation Area 1998 - 2013

Figure 7-4. Maintenance control of melaleuca in the Pennsuco Regional Mitigation Area.

During this reporting period, invasive species, primarily melaleuca, continue to decline within the treatment area. Areas of initial treatment include the east side of the Dade-Broward levee. In addition to melaleuca treatments, Brazilian pepper, torpedo grass, and Old World climbing fern were also treated. For FY2014, \$800,000 is budgeted in Pennsuco for exotic species control, and \$29,000 for law enforcement patrol by the FWC. The Pennsuco restoration funding in FY2014 totals \$829,000.

MANAGEMENT

According to the financial summary report, a balance of \$1,501,375 as interest earned on the corpus amount is available as of September 30, 2013. Utilization of monies from this fund will commence when initial and follow-up exotic treatments are completed, the entire project achieves maintenance level for treatment, and the restoration account has been depleted. Additionally, \$4,357,783 in the restoration interest account through this same time period is available for acquisition, restoration, or management. The total amount of funding available as interest is \$5,859,158.

FINANCIAL SUMMARY

Table 7-3 shows the balances available in the acquisition, restoration, and management categories in the financial summary, as of September 30, 2013.

Table 7-3. Financial summary as of September 30, 2013.*

Project	Land Acquisition	Restoration	Long-Term Maintenance**	Total
CREW	\$23,459	\$0	\$79,572	\$103,031
Pennsuco	\$0	\$4,380,434	\$5,859,159	\$10,239,593

* Excluding 4th quarter fiscal year interest earnings.

** Includes interest on long-term management fund corpus and interest on land and restoration funds.

Table 7-4 shows the expenditure summary, which categorizes mitigation fund spending into components of acquisition, restoration, and management for the period October 1, 2012–September 30, 2013.

Table 7-4. Expenditure summary for October 1, 2012–September 30, 2013.

Project	Land Acquisition	Restoration	Long-Term Maintenance	Total
CREW	\$0	\$37	\$14,067	\$14,104
Pennsuco	\$0	\$835,927	\$0	\$835,927
Total	\$0	\$835,964	\$14,067	\$850,031
