Blue shaded and **bolded** dates are the compliance sampling events and corresponding flow-weighted mean concentrations (FWMC).

Light green shaded cell indicates there was flow at the site on the sampling day.

"-" in flow data indicates the value was negative and zeroed out.

Notes:

1. Total of flow at S332D + S18C.

2. All sampling events and flow data are used to calculate flow-weighted mean concentrations.

3. G qualified. Analyte was detected at or above the method detection limit in both the sample and the associated field blank, equipment blank, or trip blank, and the blank value was greater than 10% of the associated sample value.

Blue shaded and **bolded** dates are the compliance sampling events and corresponding flow-weighted mean concentrations (FWMC).  
 Light green shaded cell indicates there was flow at the site on the sampling day.

"-" in flow data indicates the value was negative and zeroed out.

Notes:

- Total of flow at S332D + G737 + S18C.
- S200 daily mean flow on the day when G737 gates were opened.
- G: Analyte was detected at or above the method detection limit in both the sample and the associated field blank, equipment blank, or trip blank, and the blank value was greater than 10% of the associated sample value.  
 J: The sample was collected from a disconnected pool and was not representative of the surrounding water body. The surrounding area was dry.
- NOB - No Bottle Sample. Construction at the site during this period precluded safe, representative samples.
- All sampling events and flow data are used to calculate flow-weighted mean concentrations.

Blue shaded and bolded dates are the compliance sampling events and corresponding flow-weighted mean concentrations (FWMC).

Light green shaded cell indicates there was flow at the site on the sampling day.

"-" in flow data indicates the value was negative and zeroed out. "M" indicates the daily mean flow datum was not available.

Notes:

1. Total of flow at S332D + G737 + S18C.

2. S200 daily mean flow on the day when G737 gates were opened.

3. G: Analyte was detected at or above the method detection limit in both the sample and the associated field blank, equipment blank, or trip blank, and the blank value was greater than 10% of the associated sample value.

J: The sample was collected from a disconnected pool and was not representative of the surrounding water body. The surrounding area was dry.

Y: Analysis performed on un/improperly preserved sample.

4. NOB - No Bottle Sample. Construction at the site during this period precluded safe, representative samples.

5. All sampling events and flow data are used to calculate flow-weighted mean concentrations.
